DENVER WATER

WATER WATCH REPORT

March 11, 2024

Supply Reservoir Contents

Reservoir	Capacity (acre-feet) Total	Capacity (acre-feet) Usable	Current Usable Contents (acre-feet)	Percent Full Current	Percent Full Last Year	Percent Full Historical Median
Antero	20,122	20,067	20,283	101%	99%	99%
Eleven Mile	97,779	97,779	99,968	102%	102%	102%
Cheesman	79,064	79,064	65,145	82%	84%	83%
Marston	19,108	13,133	8,759	67%	56%	54%
Strontia Springs	7,863	7,163	6,239	87%	86%	94%
Chatfield	28,709	12,415	11,902	96%	89%	95%
Dillon	257,304	249,095	209,590	84%	80%	88%
Gross*	41,811	29,811	6,225	21%	23%	38%
Ralston	10,776	7,276	4,475	62%	59%	52%
Meadow Creek	5,370	4,520	-	0%	0%	12%
Total	**567,906**	**520,323**	**432,586**	**83%**	**81%**	**79%**

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

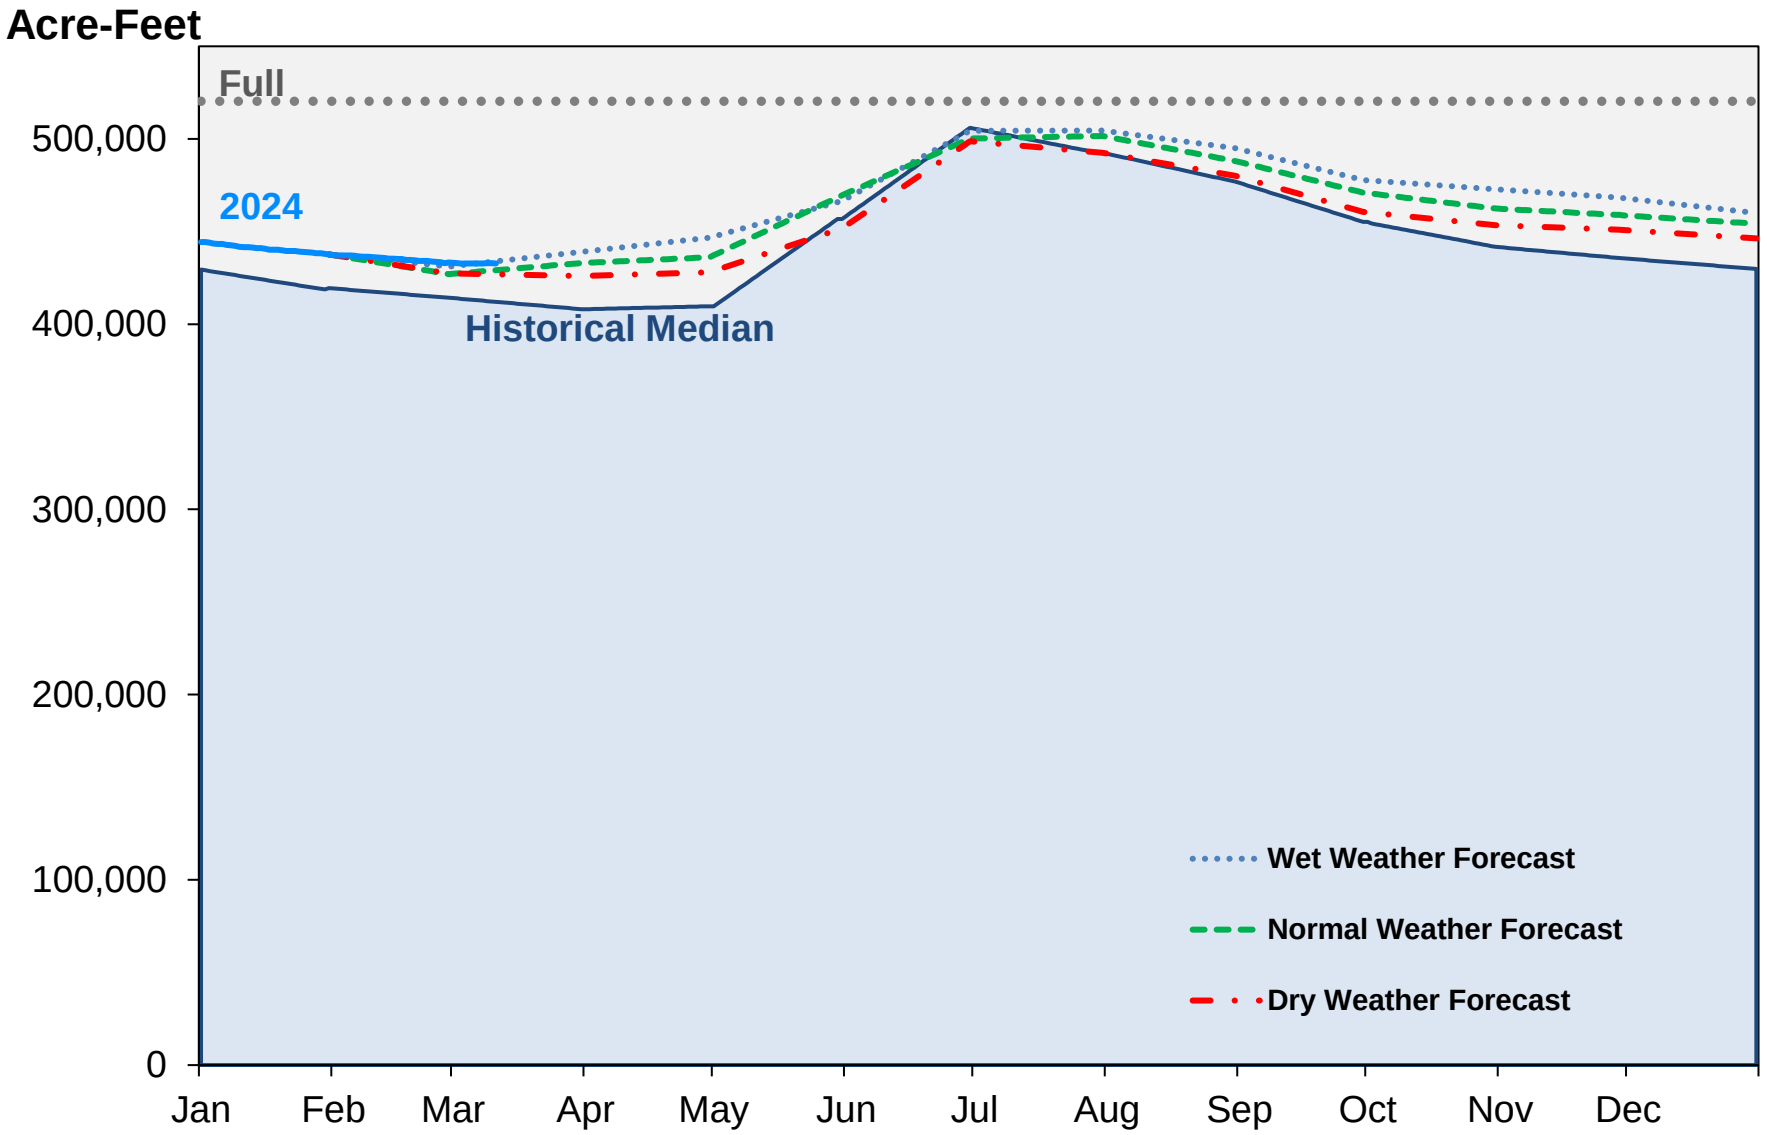
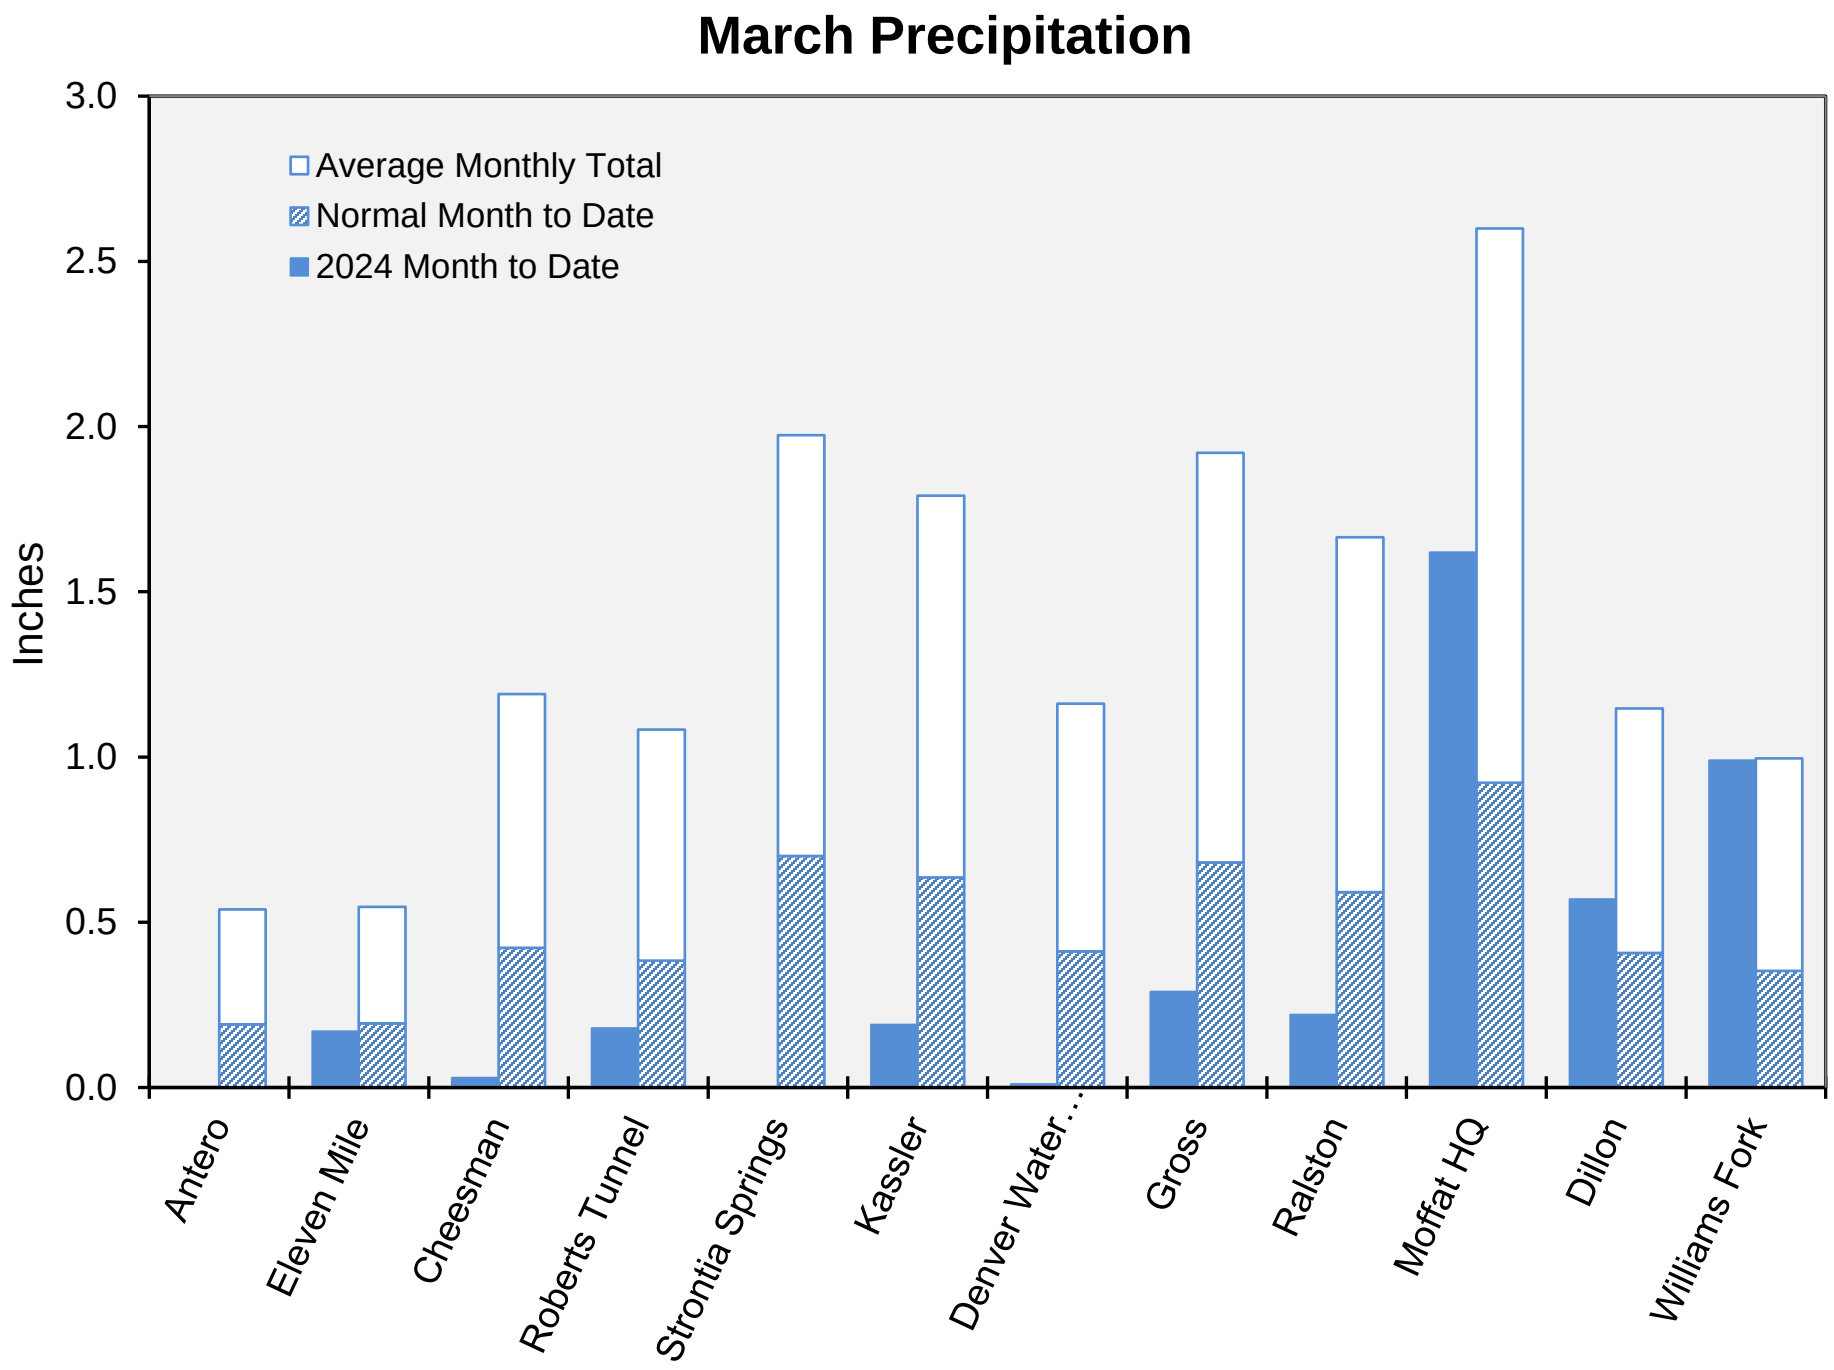
Supply Reservoir Contents



Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

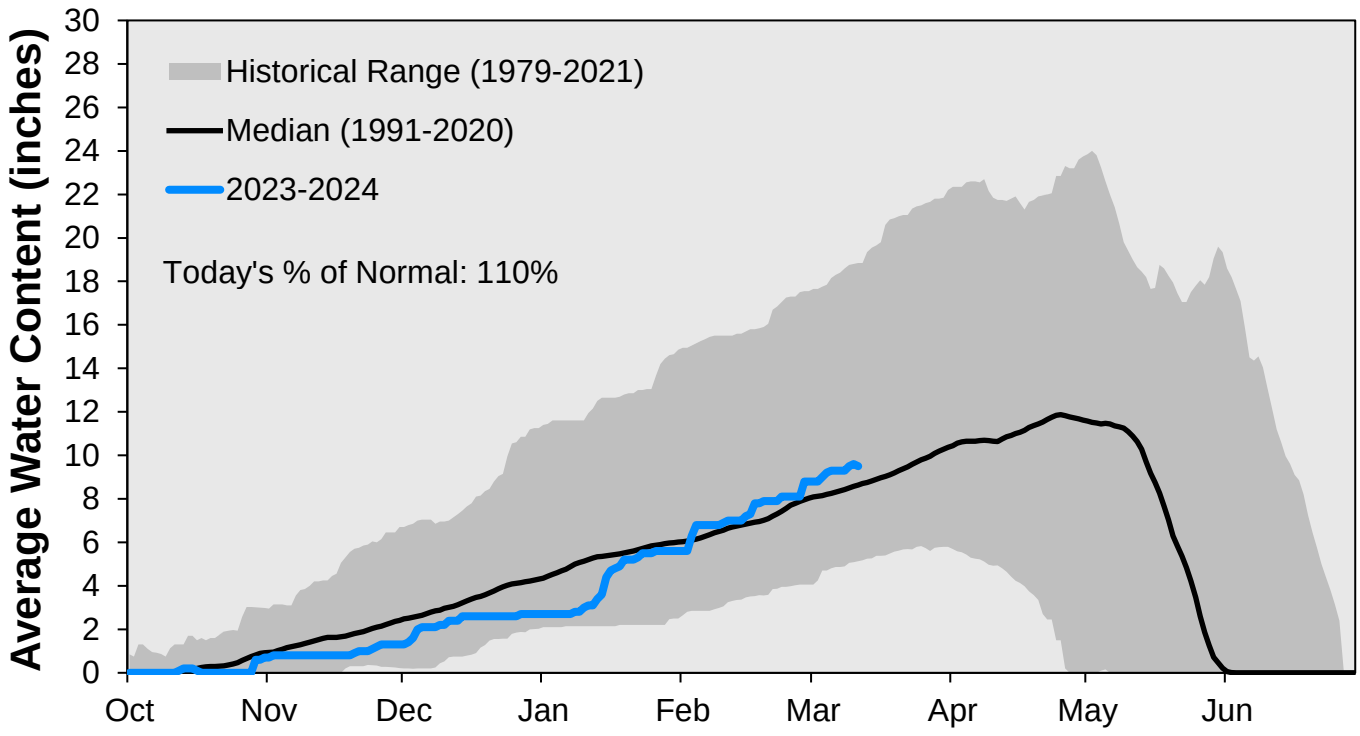
Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

March 11, 2024



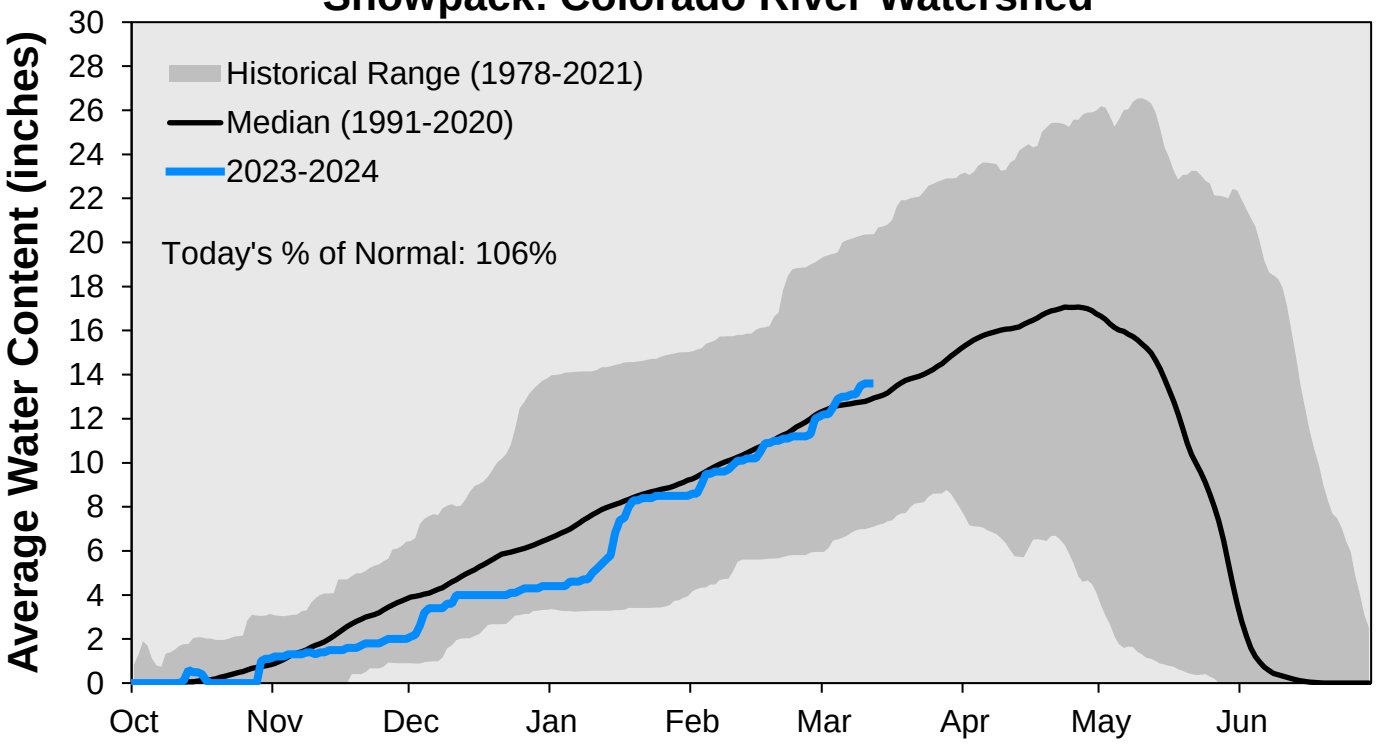
March 11, 2024

Snowpack: South Platte River Watershed



Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

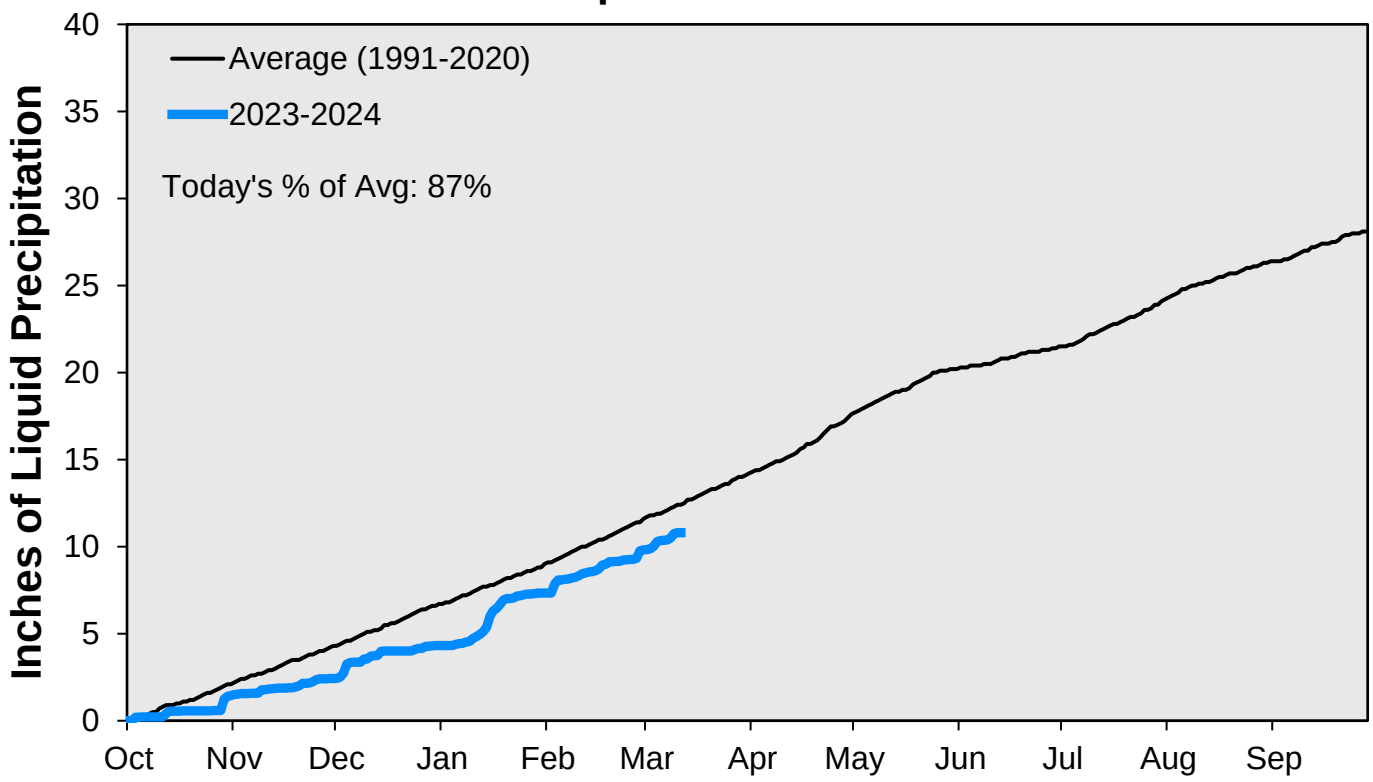
Snowpack: Colorado River Watershed



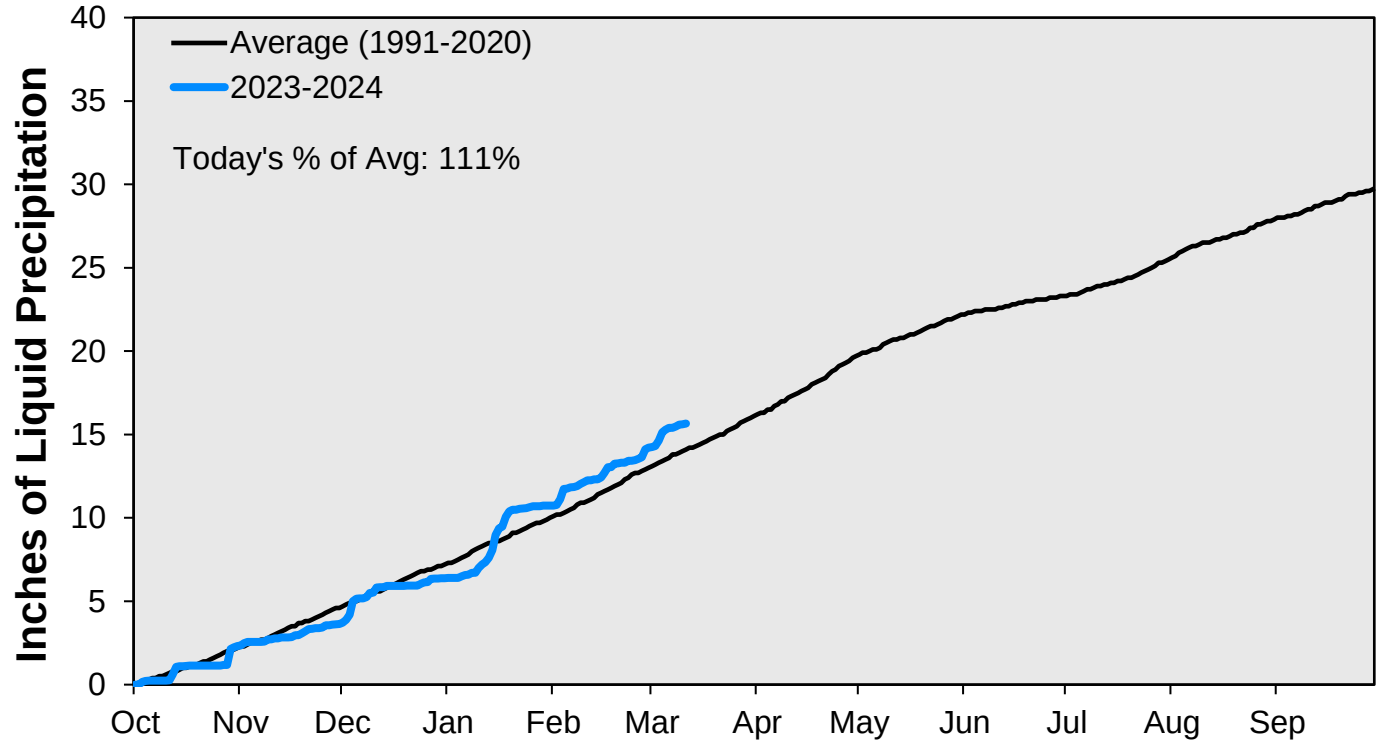
Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

March 11, 2024

Cumulative Precipitation: South Platte River



Cumulative Precipitation: Colorado River



Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

	30	111												
	31	112												
Monthly Average		110	106	102										107
% of 2023 Expected Daily Use		105%	101%	99%										102%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather March 11th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on March 11th, 2024. 6) Daily water figures are subject to change.

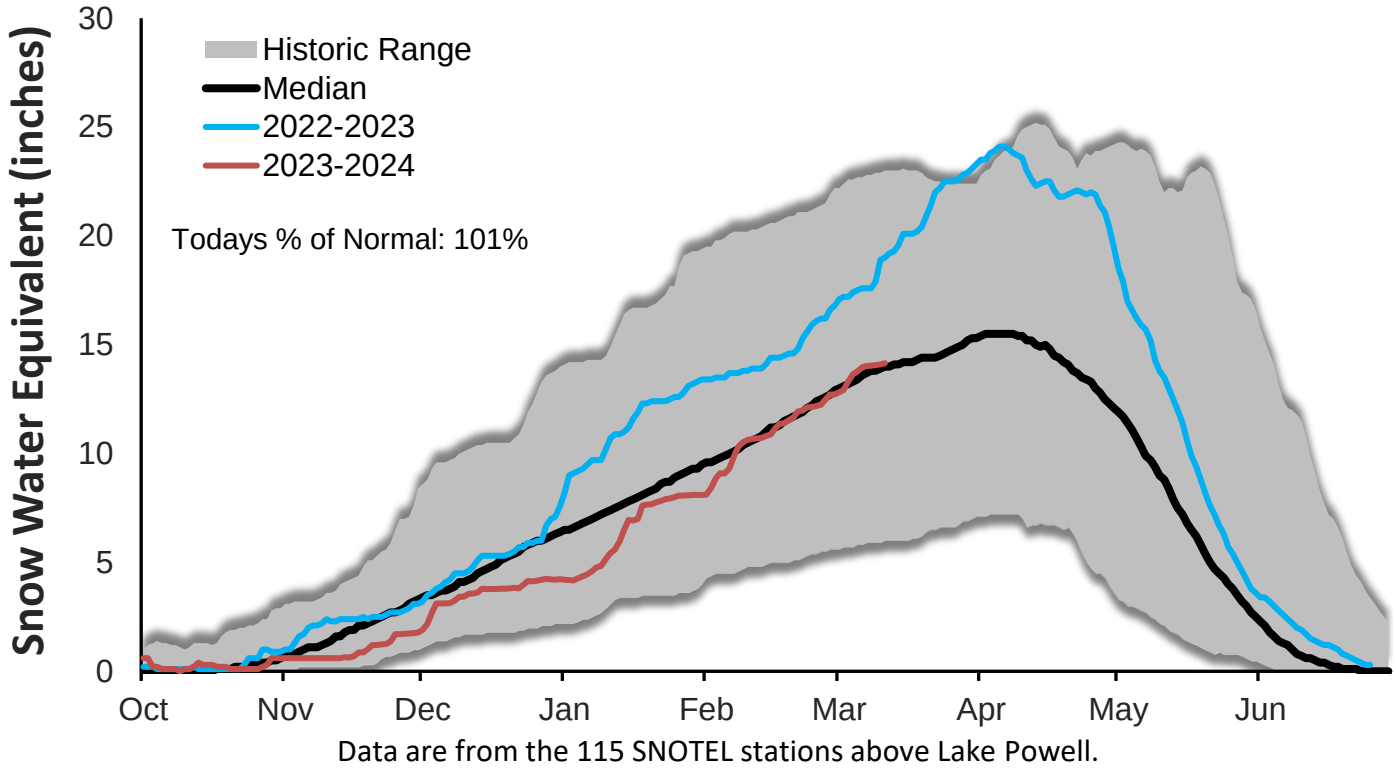
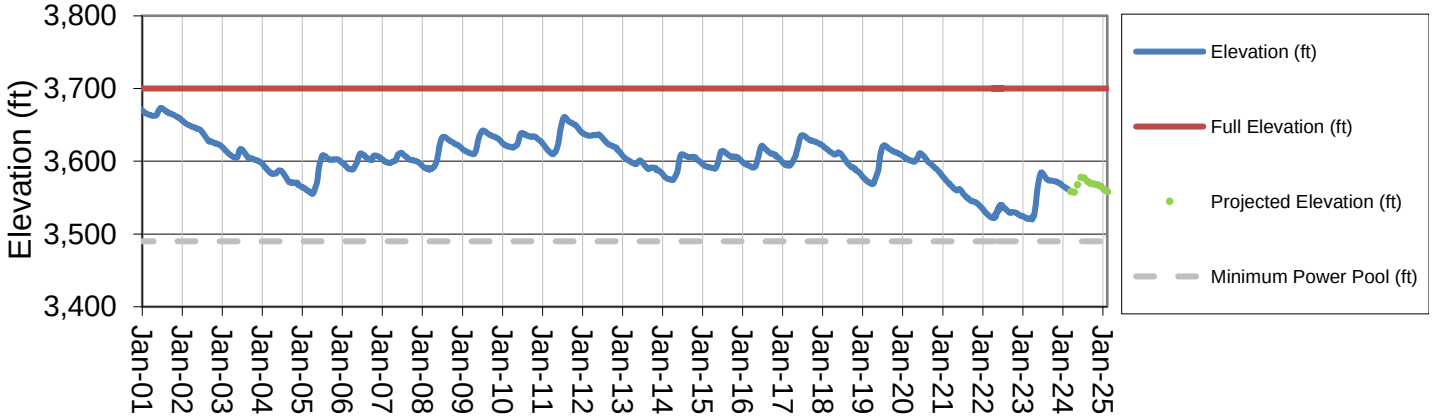
Lake Powell Report*

Colorado River Above Lake Powell Snowpack



Data are from the 115 SNOTEL stations above Lake Powell.

Lake Powell Elevation (2001-Current)



* *Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.*
