DENVER WATER

WATER WATCH REPORT

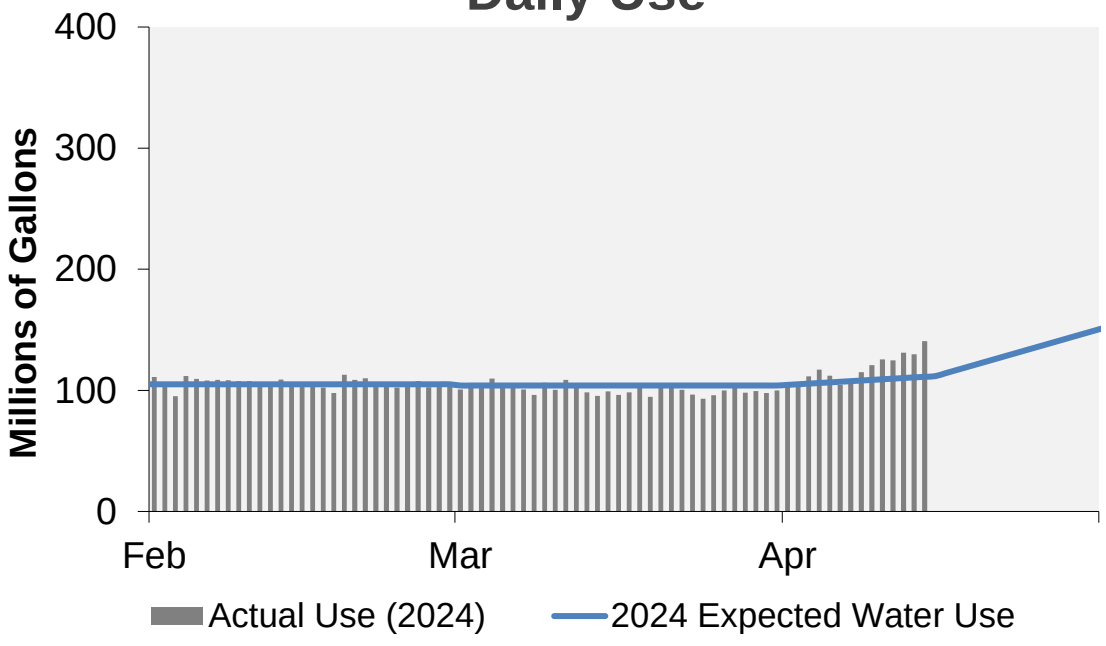
April 15, 2024

Supply Reservoir Contents

Reservoir	Capacity (acre-feet) Total	Capacity (acre-feet) Usable	Current Usable Contents (acre-feet)	Percent Full Current	Percent Full Last Year	Percent Full Historical Median
Antero	20,122	20,067	19,890	99%	100%	99%
Eleven Mile	97,779	97,779	100,243	103%	102%	102%
Cheesman	79,064	79,064	72,477	92%	81%	87%
Marston	19,108	13,133	6,638	51%	54%	65%
Strontia Springs	7,863	7,163	6,186	86%	85%	94%
Chatfield	28,709	12,415	12,410	100%	94%	95%
Dillon	257,304	249,095	209,757	84%	79%	86%
Gross*	41,811	29,811	4,687	16%	19%	28%
Ralston	10,776	7,276	5,584	77%	69%	61%
Meadow Creek	5,370	4,520	-	0%	0%	12%
Total	**567,906**	**520,323**	**437,872**	**84%**	**80%**	**79%**

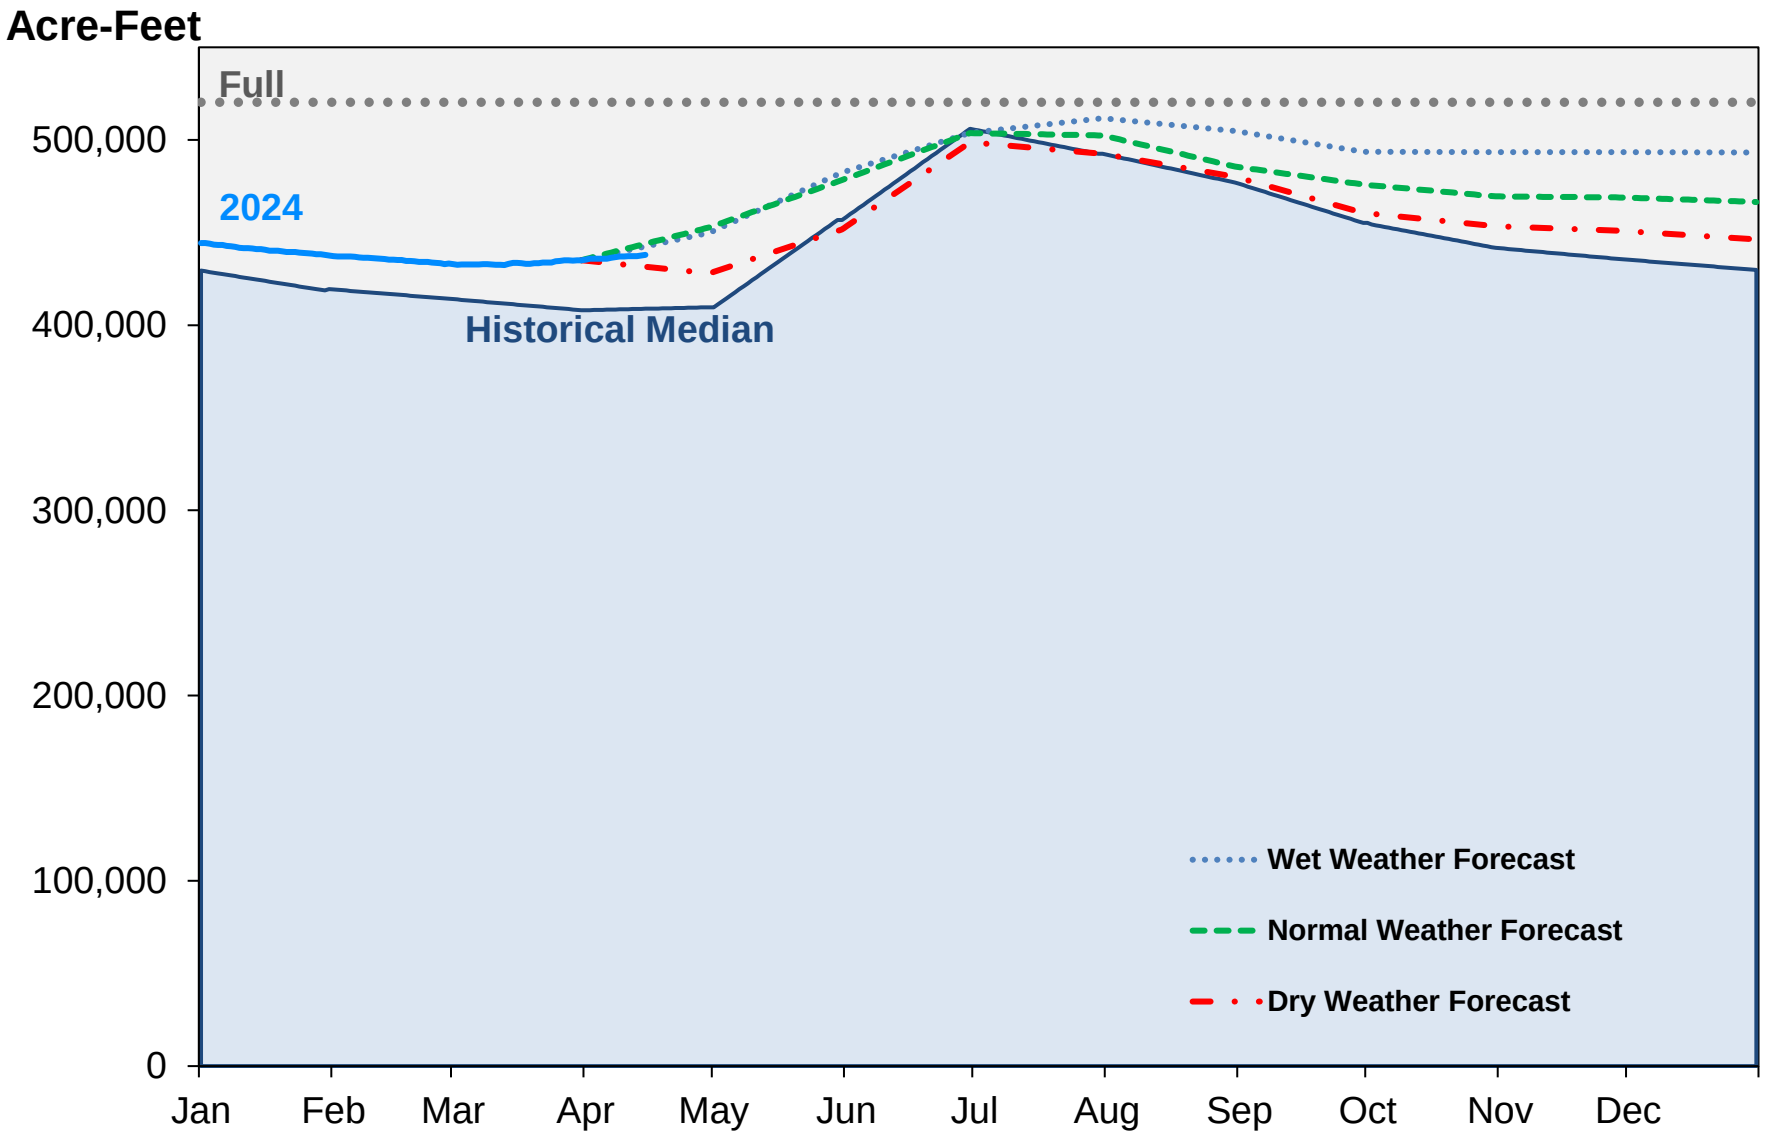
*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use



April 15, 2024

Supply Reservoir Contents



Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

April 15, 2024

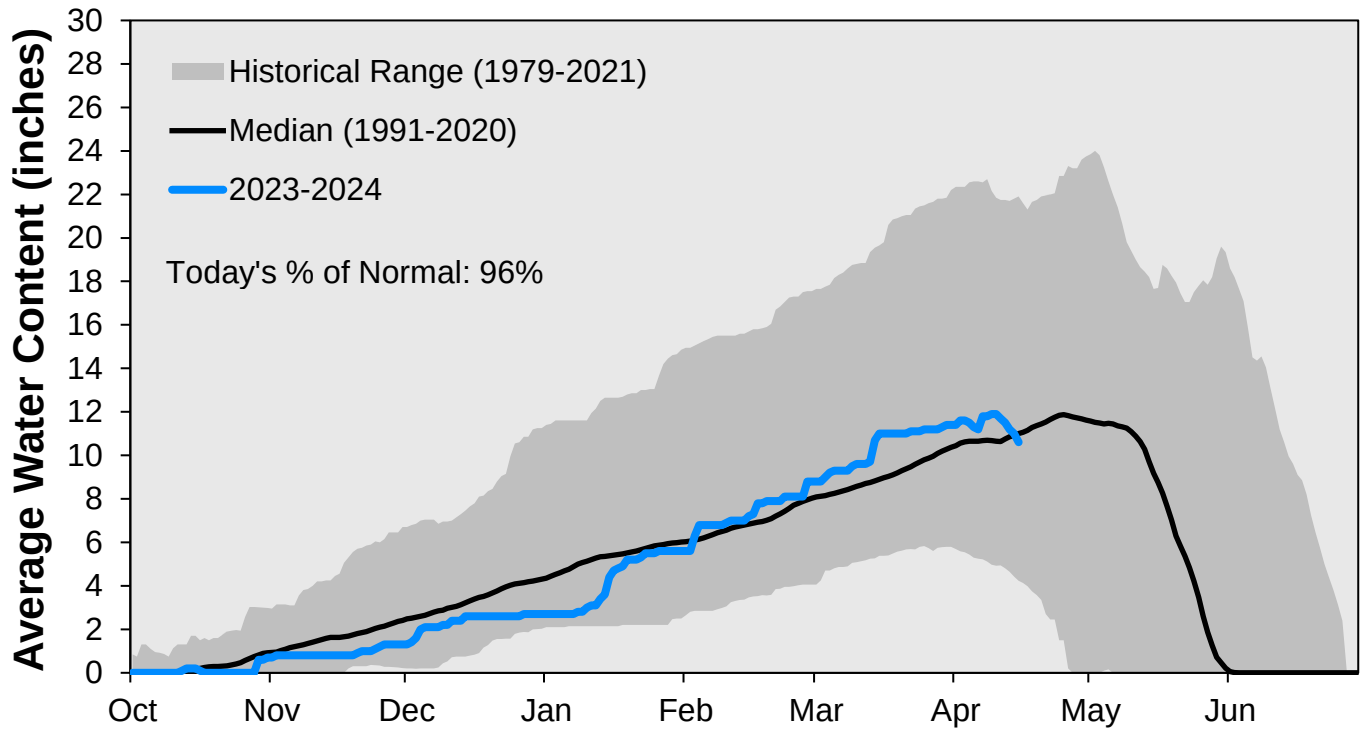
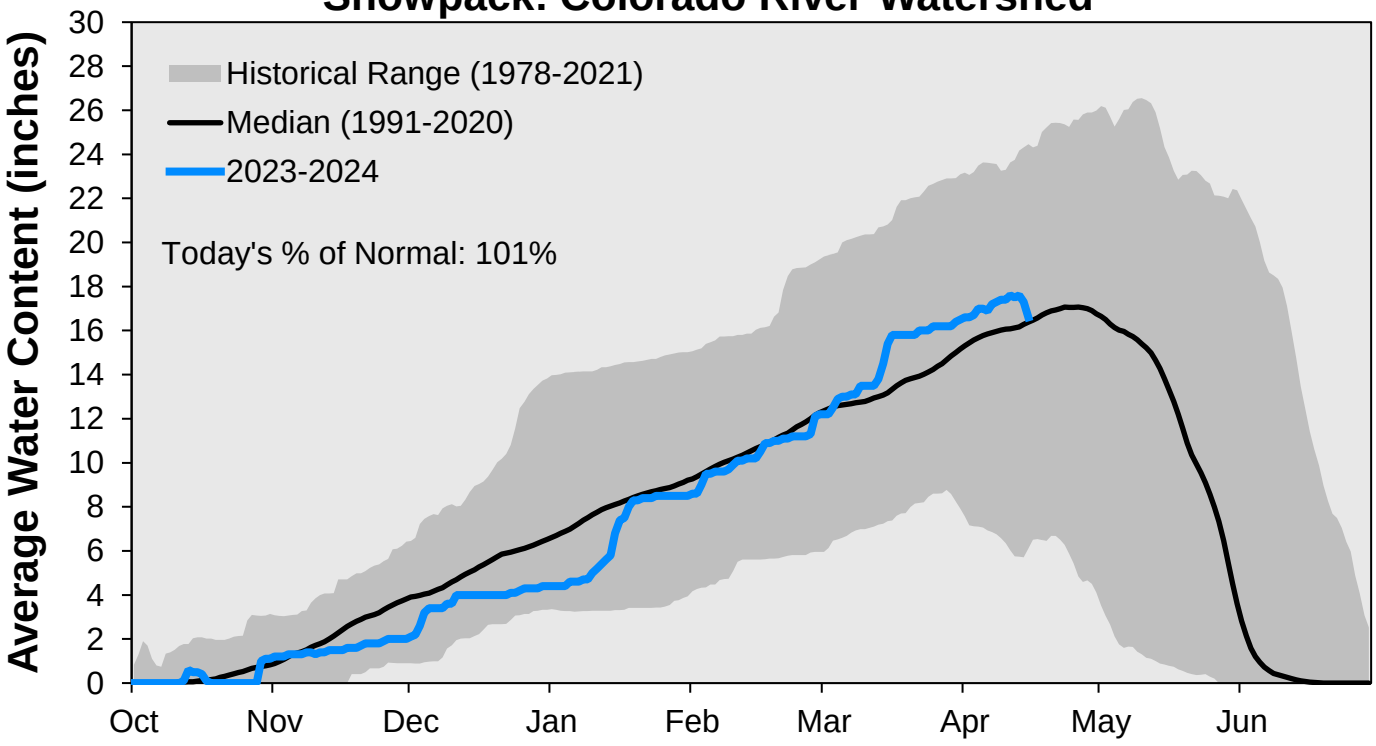
Snowpack: South Platte River Watershed



Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

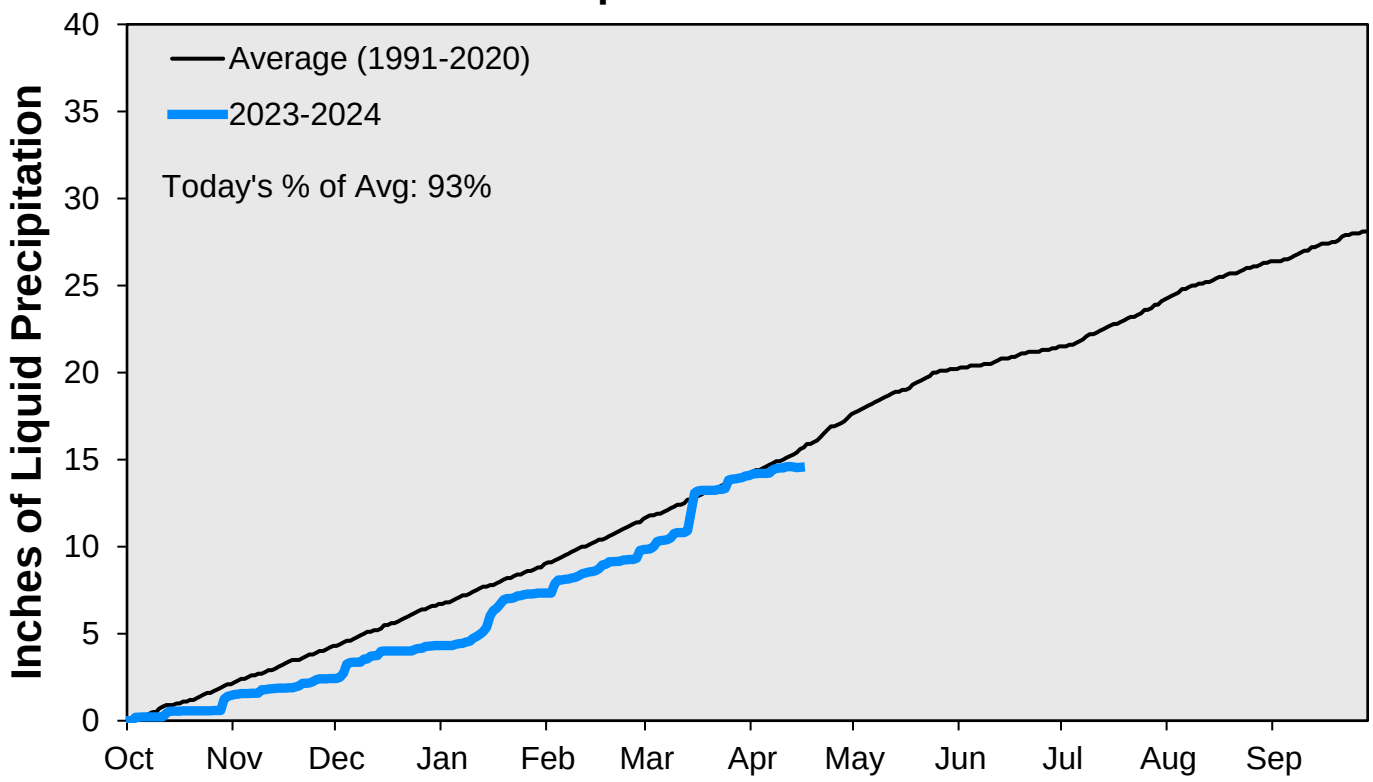
Snowpack: Colorado River Watershed



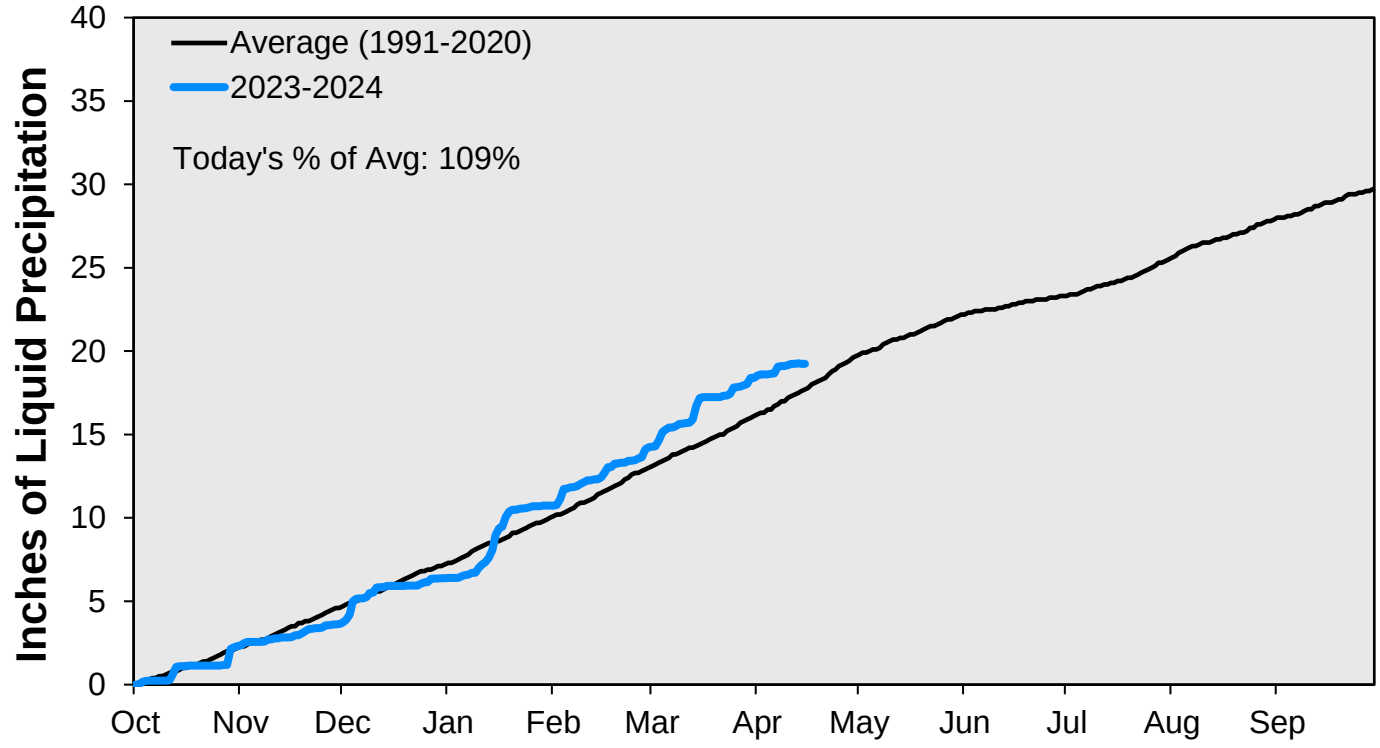
Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

April 15, 2024

Cumulative Precipitation: South Platte River



Cumulative Precipitation: Colorado River



Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

% of 2023 Expected Daily Use		105%	101%	97%	98%									100%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 8th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 8th, 2024. 6) Daily water figures are subject to change.

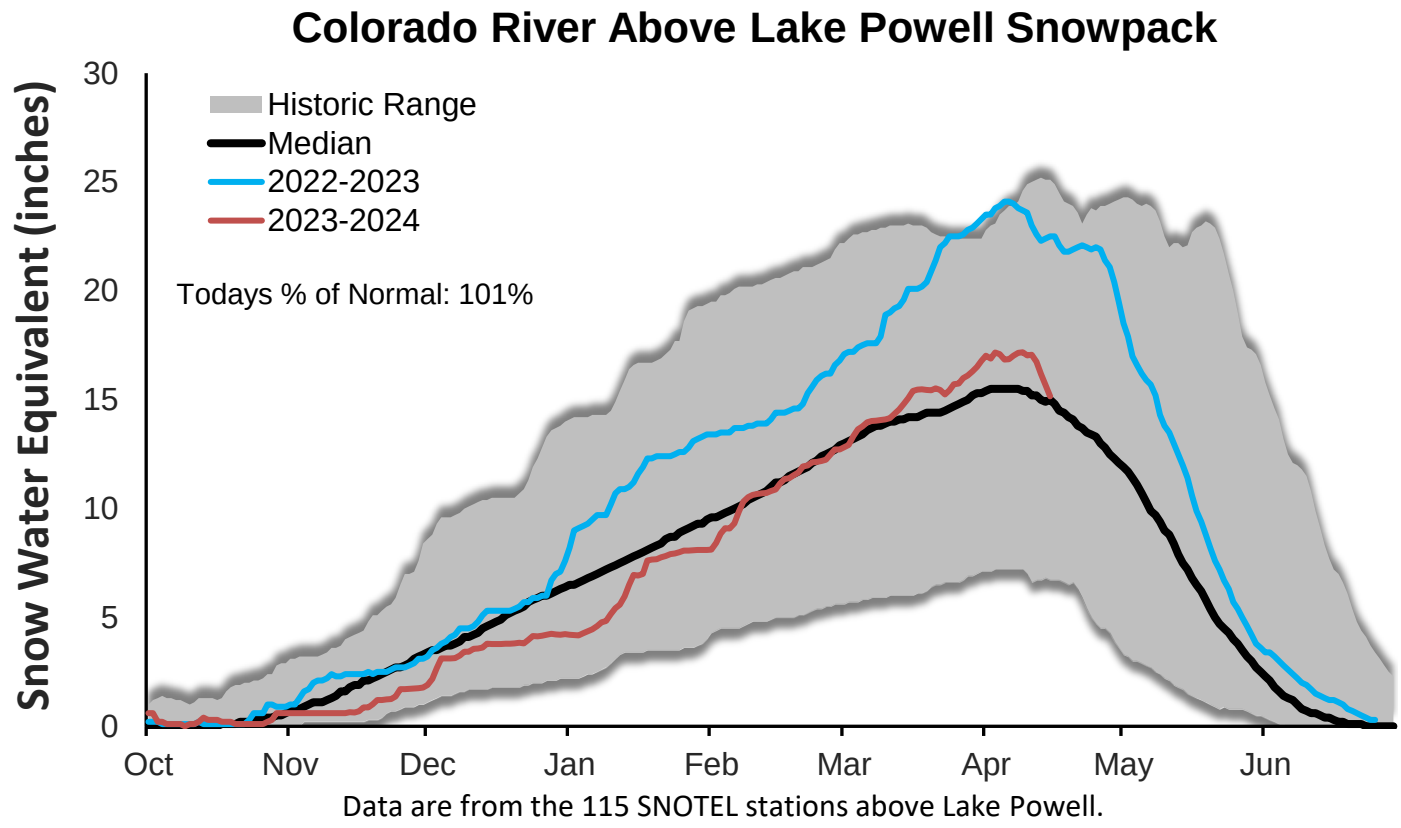
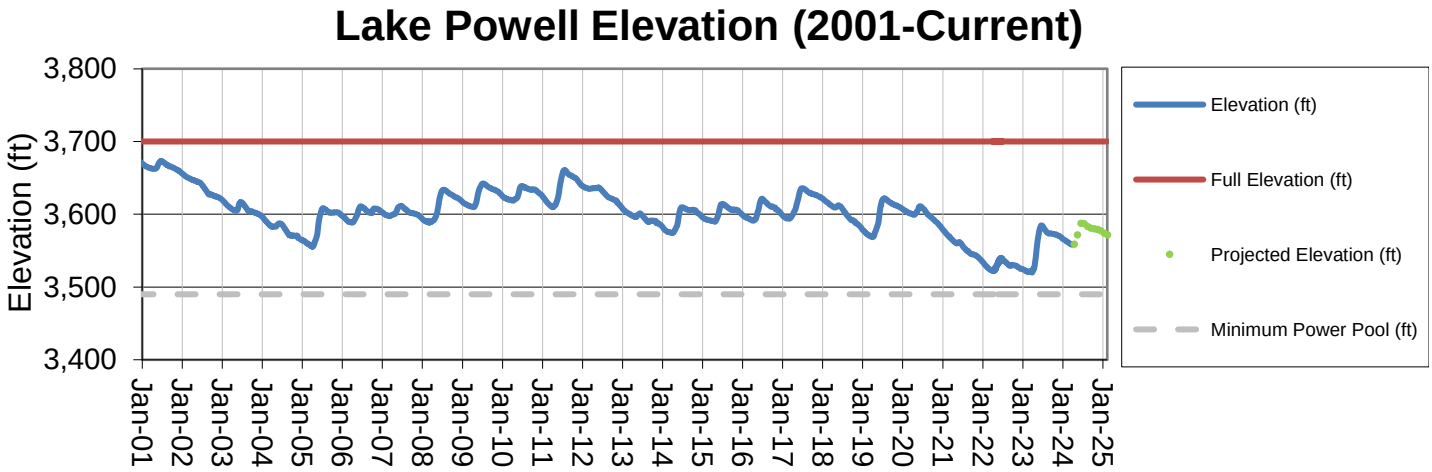
Lake Powell Report*





* *Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.*
