

WATER WATCH REPORT

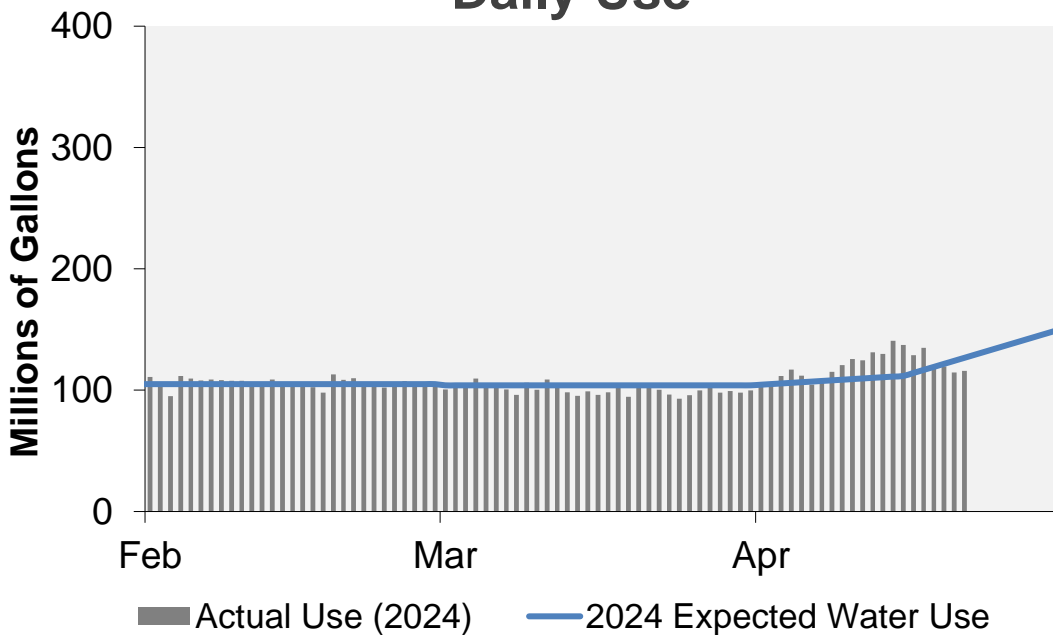

April 22, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last Year	Historical Median
	Total	Usable				
Antero	20,122	20,067	19,912	99%	99%	99%
Eleven Mile	97,779	97,779	100,209	102%	102%	102%
Cheesman	79,064	79,064	74,727	95%	82%	88%
Marston	19,108	13,133	6,180	47%	54%	68%
Strontia Springs	7,863	7,163	6,419	90%	82%	94%
Chatfield	28,709	12,415	12,411	100%	92%	94%
Dillon	257,304	249,095	211,351	85%	79%	85%
Gross*	41,811	29,811	5,641	19%	17%	26%
Ralston	10,776	7,276	5,474	75%	76%	64%
Meadow Creek	5,370	4,520	-	0%	0%	12%
Total	567,906	520,323	442,323	85%	80%	79%

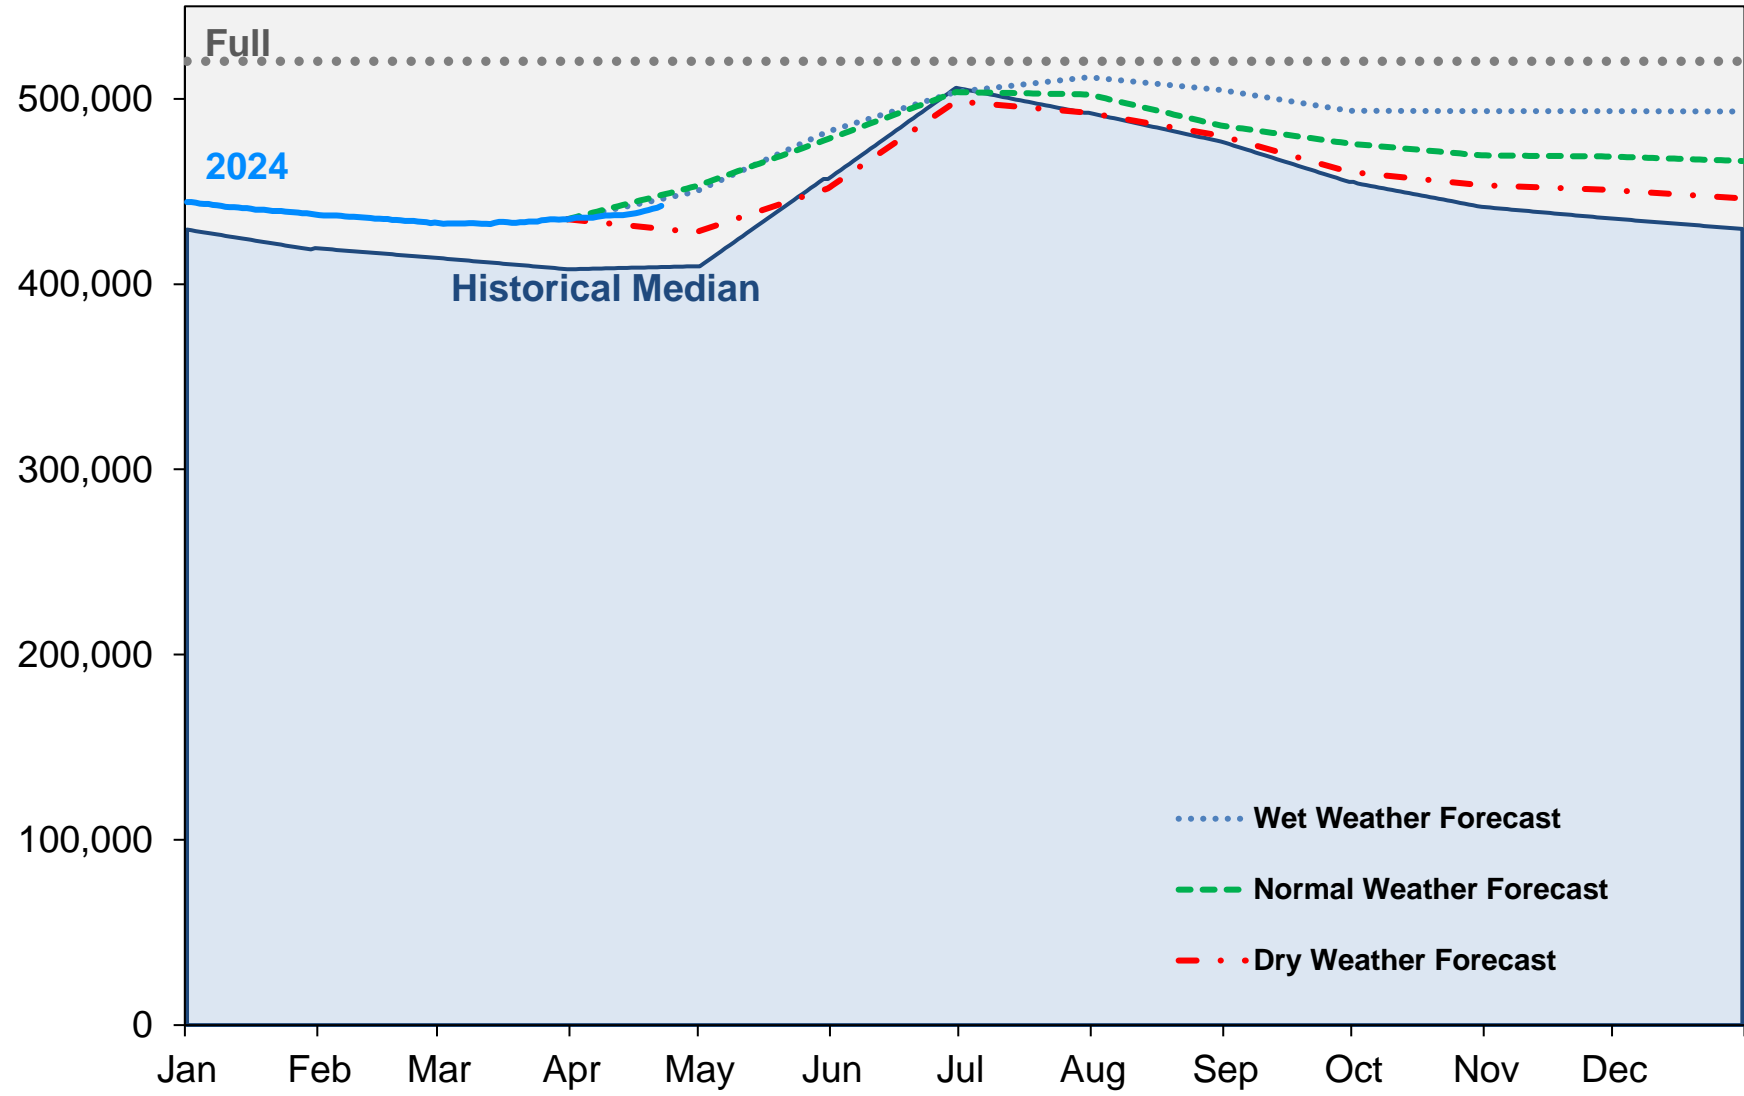

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

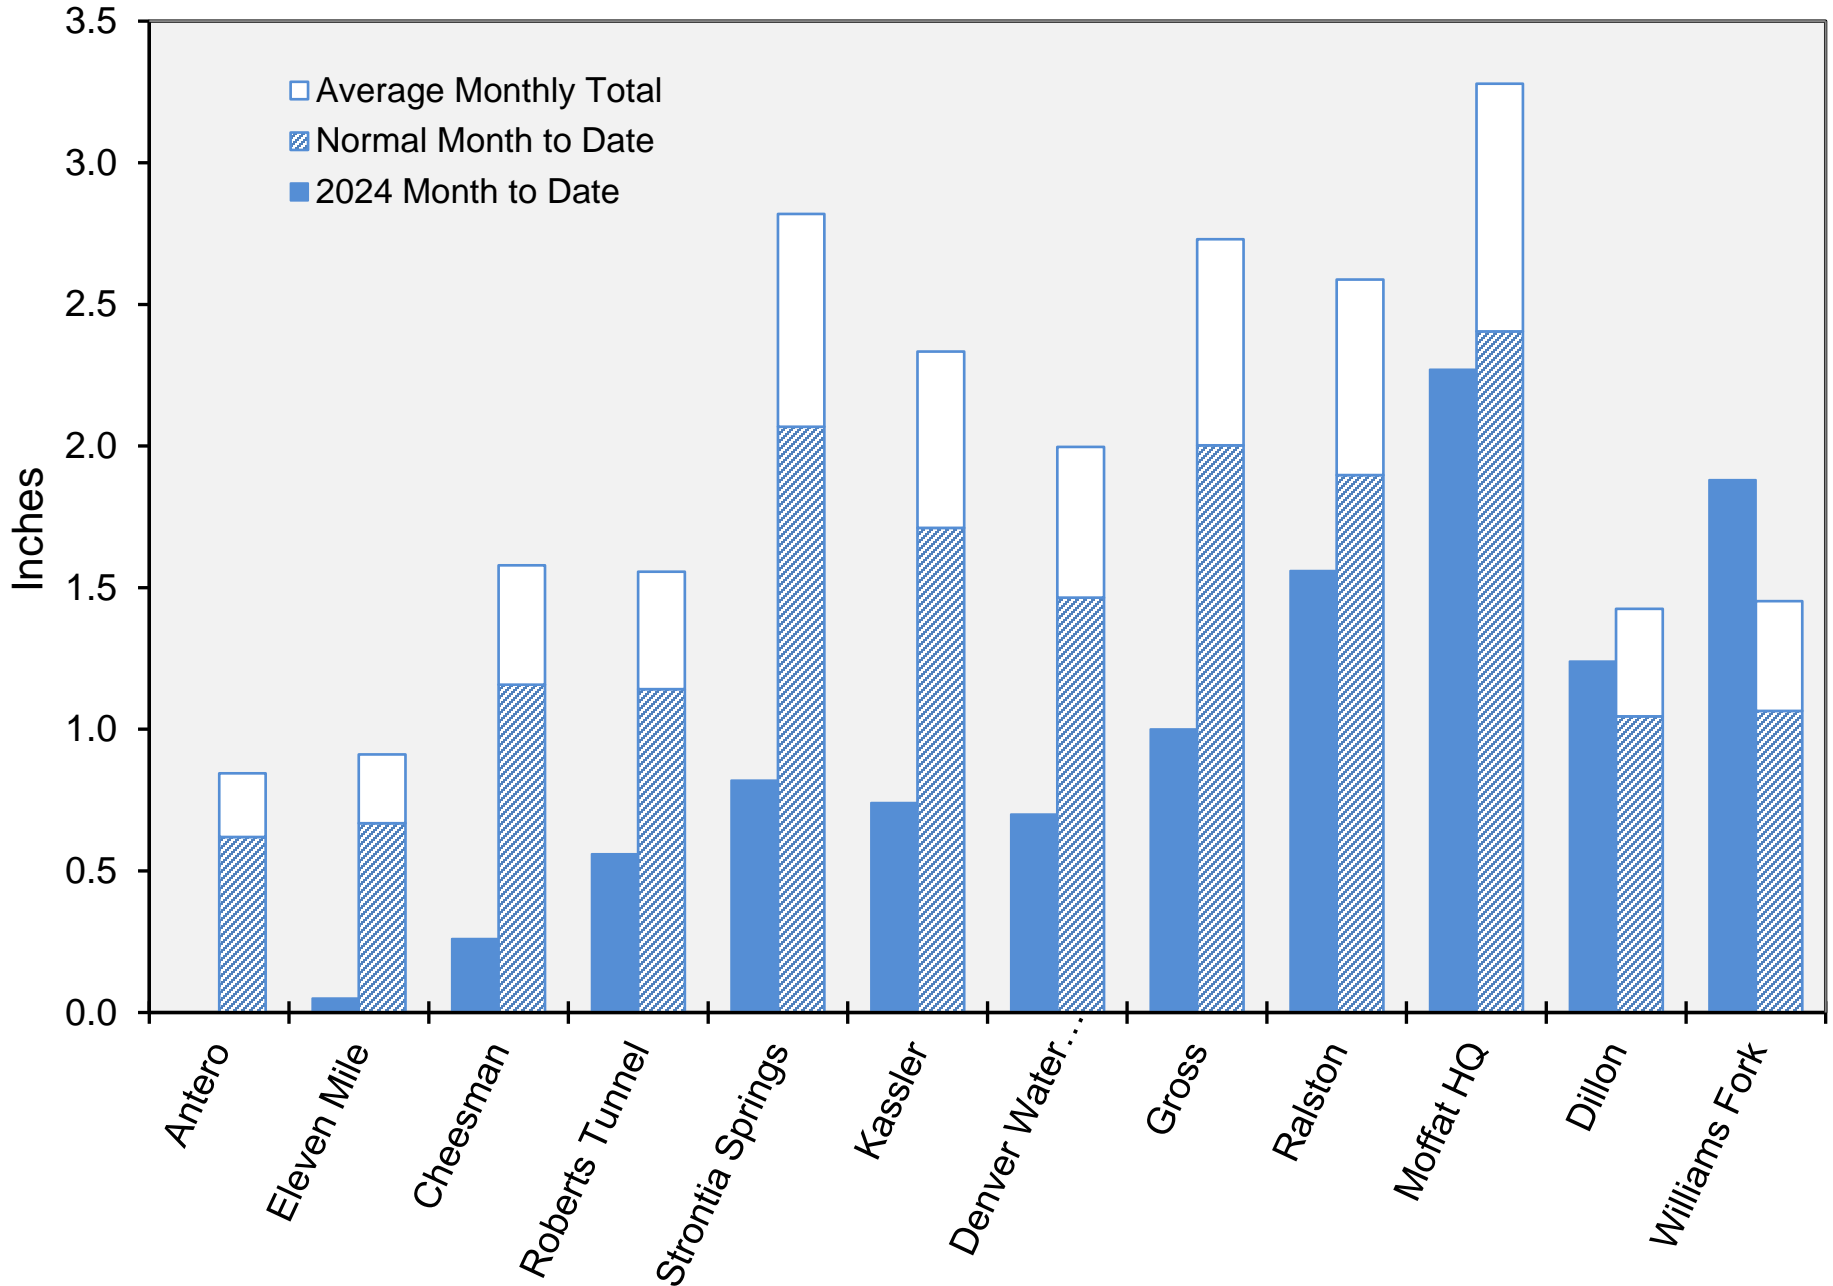

Acre-Feet

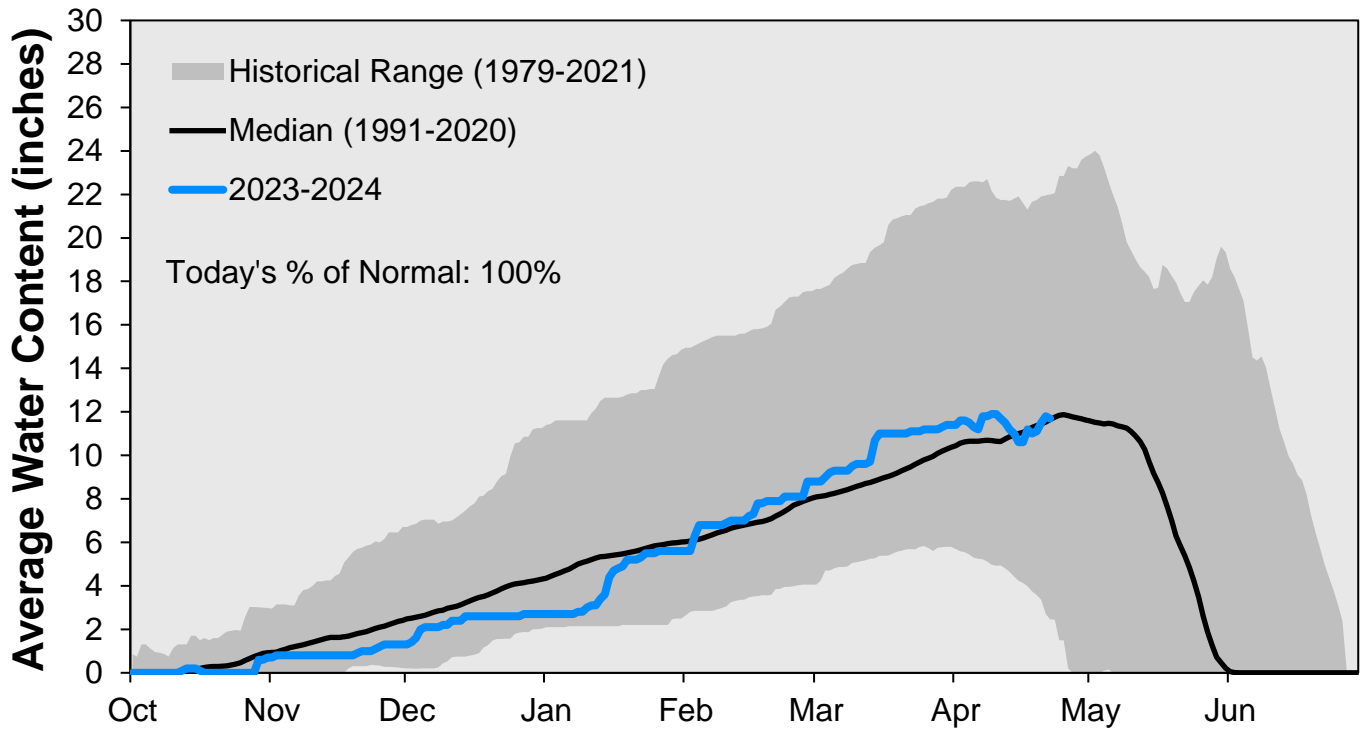

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

April Precipitation

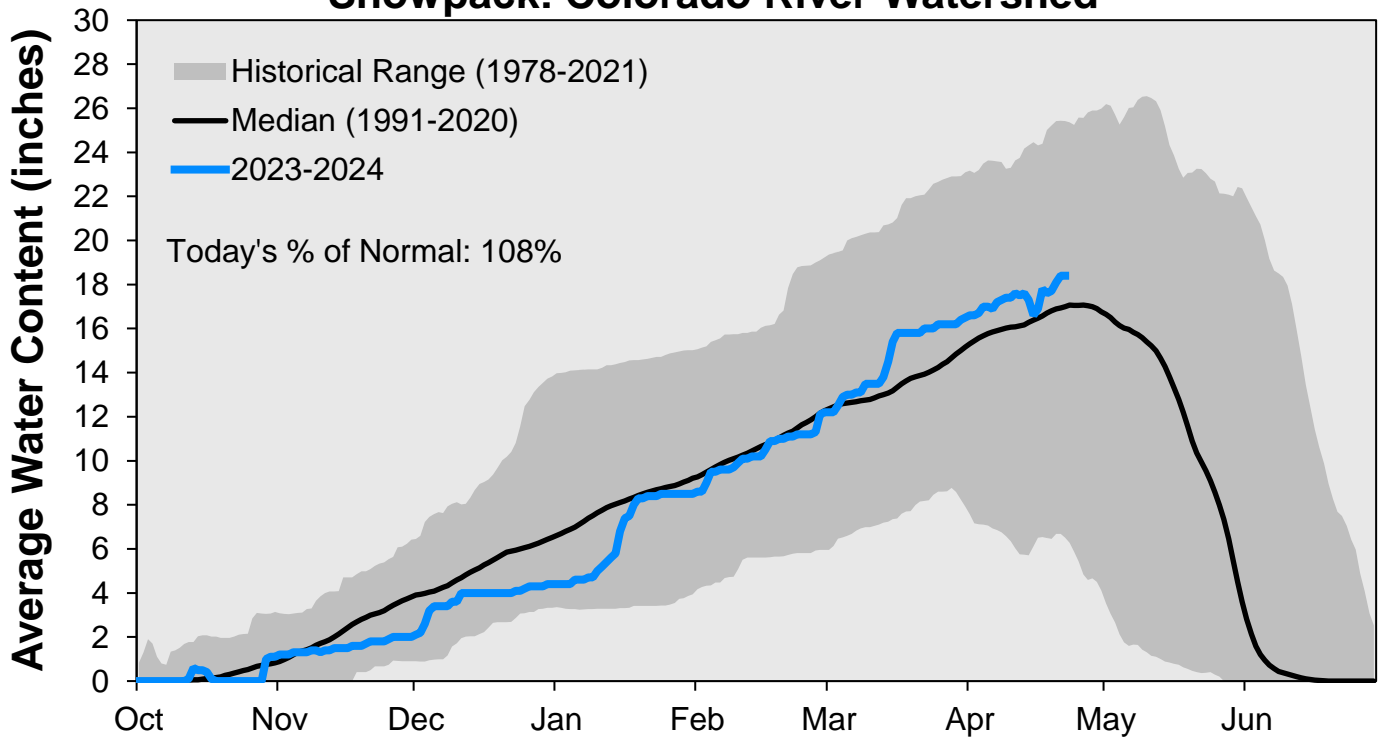

Snowpack: South Platte River Watershed

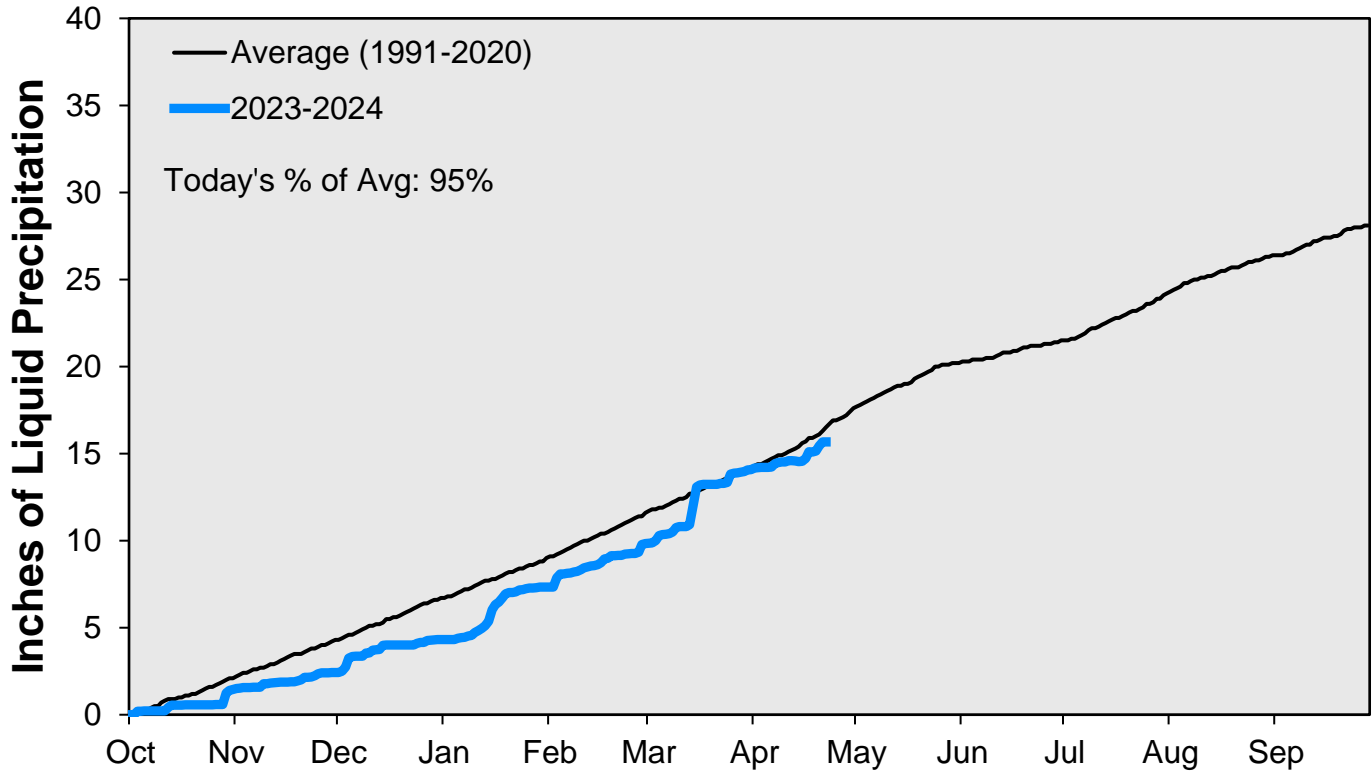

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Snowpack: Colorado River Watershed

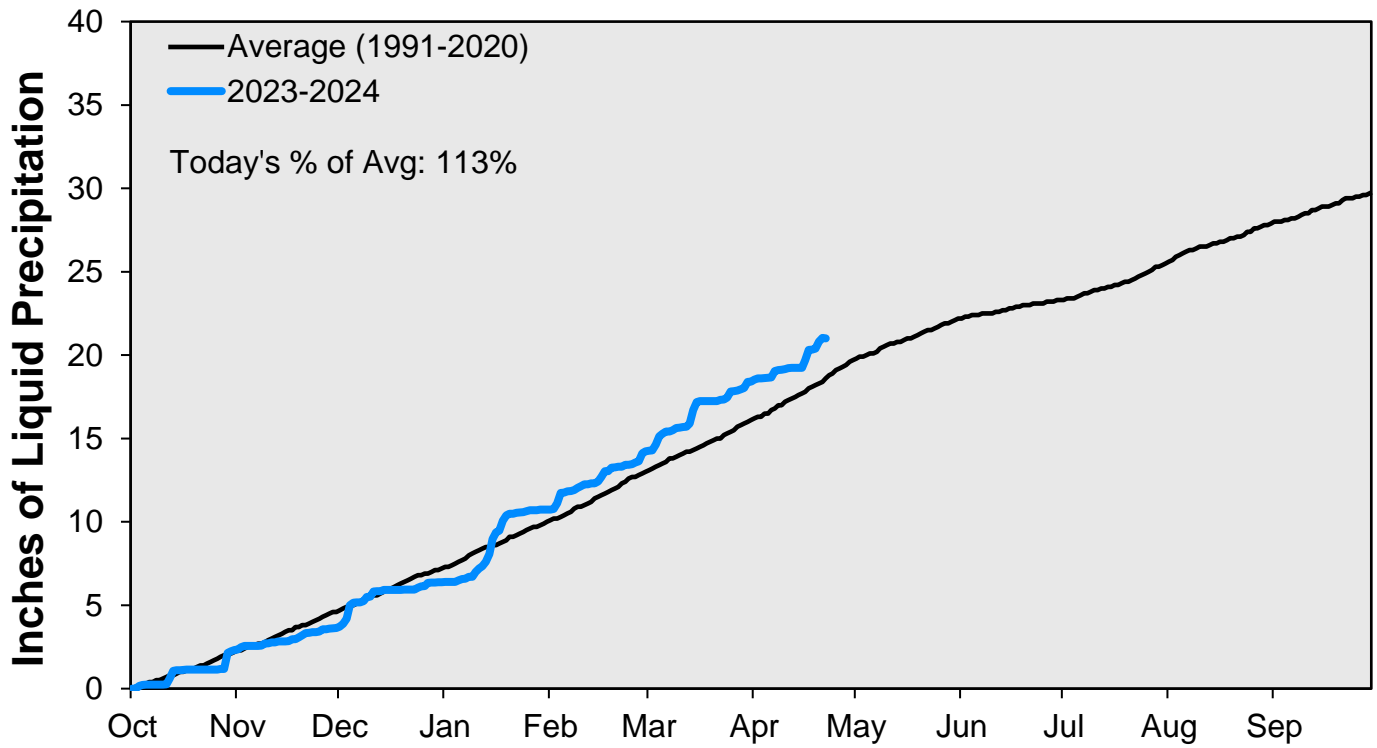

Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Cumulative Precipitation: South Platte River

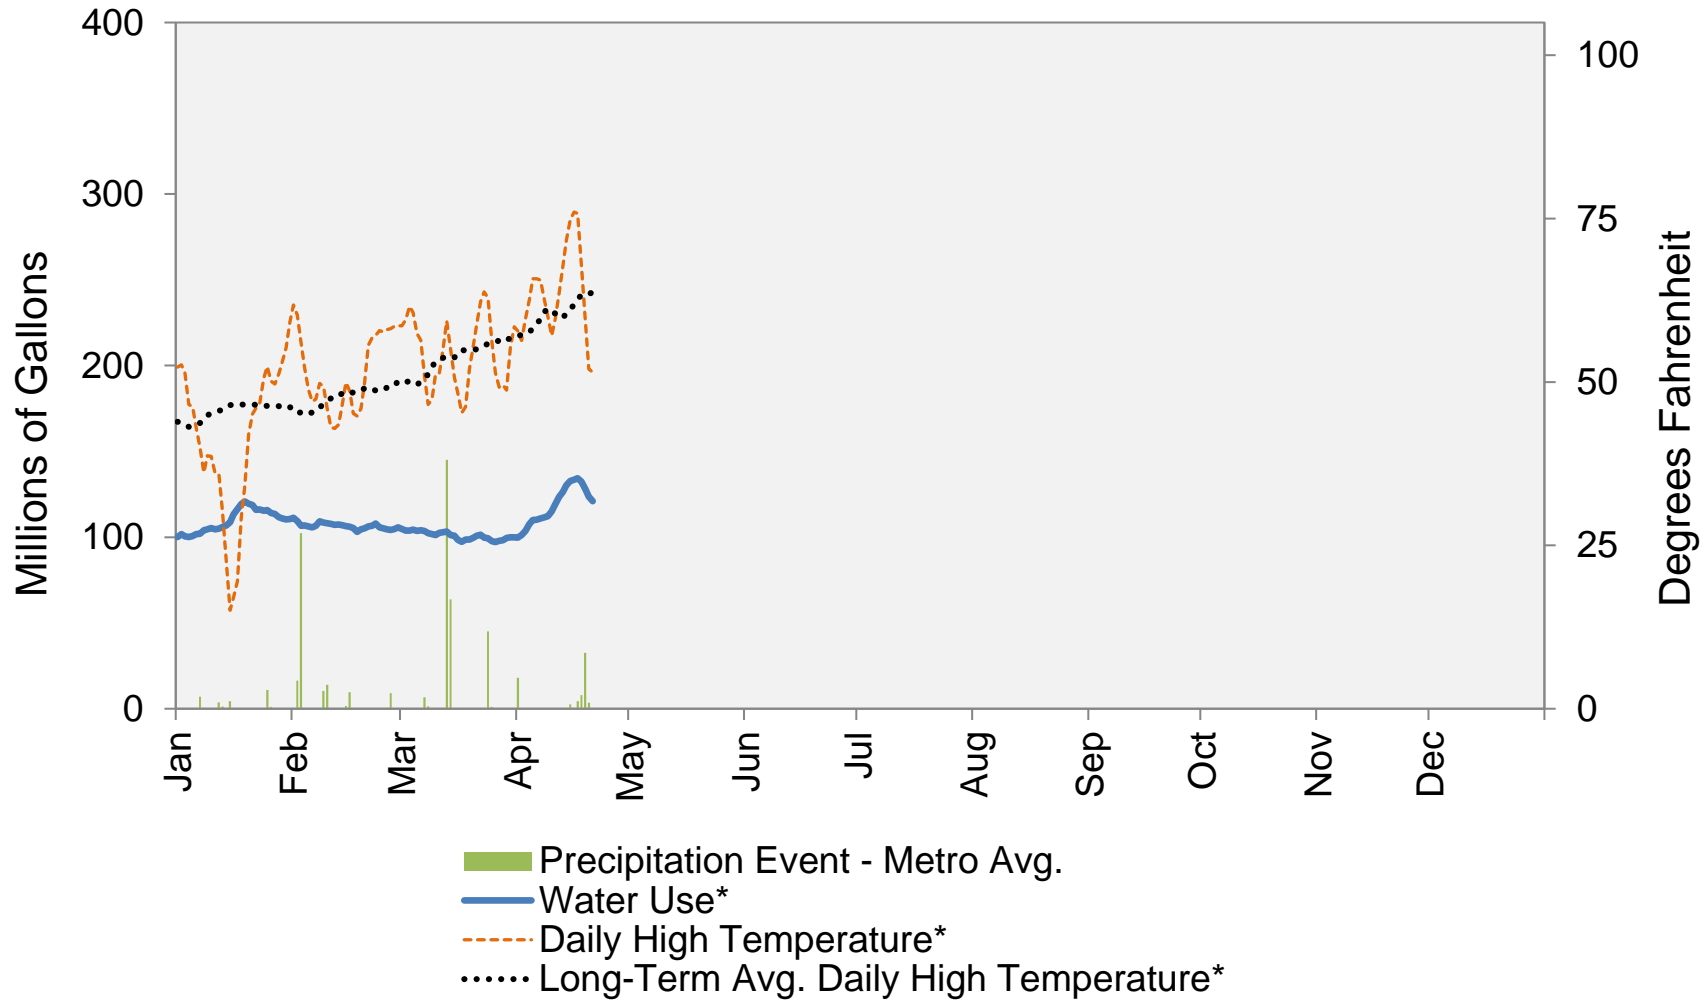

Cumulative Precipitation: Colorado River

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

2024 Water Use and Weather Conditions

* Rolling 5-Day Avg.

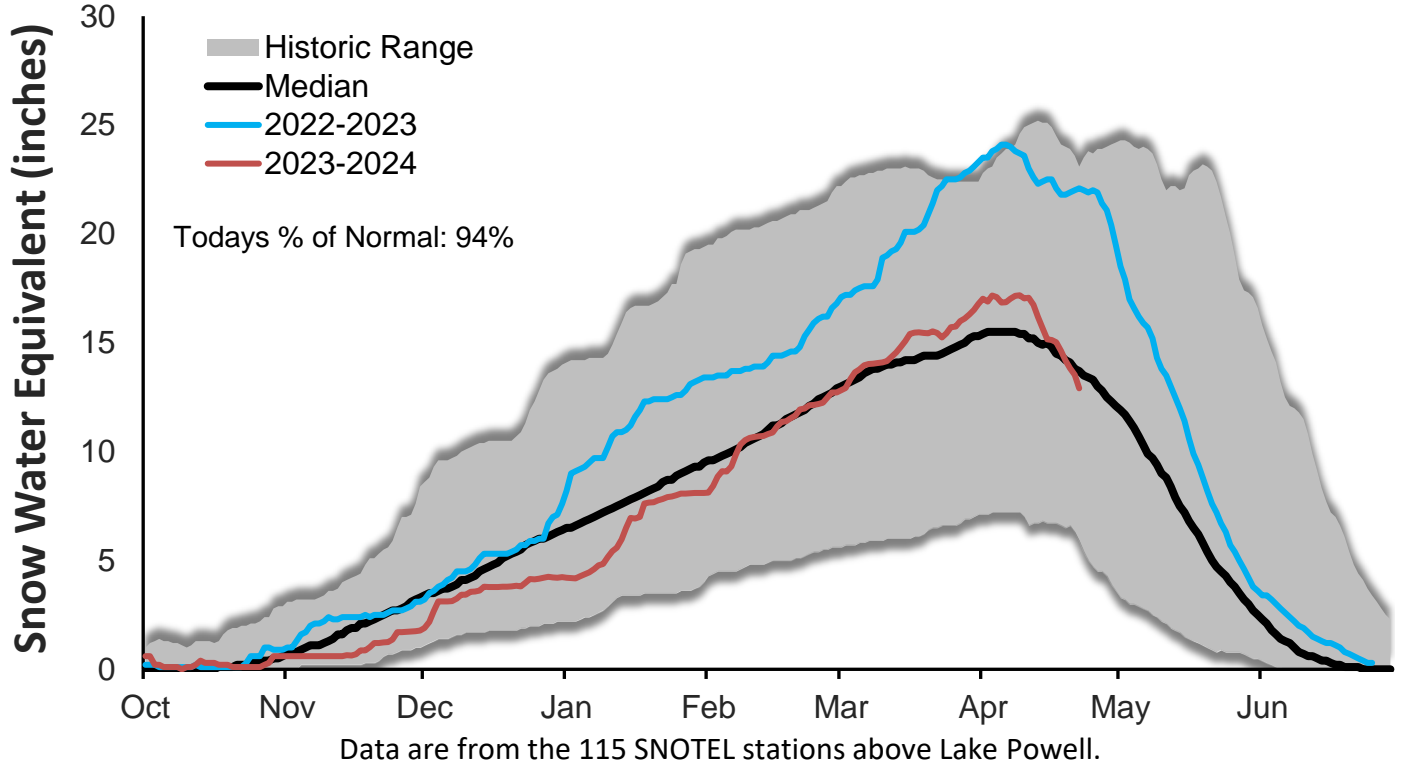

April 22, 2024

Denver Water Use and Reservoir Contents 2024													
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 518,449 AF)	452,800												
Actual End-of-Month Supply Reservoir Contents (AF)	437,644	433,227	435,044										
Actual % Full	84%	84%	84%										
Historical Median % Full	81%	80%	79%	79%	88%	98%	95%	92%	88%	85%	84%	83%

	31	112		100									
Monthly Average	110	106	100	120									108
% of 2023 Expected Daily Use	105%	101%	97%	100%									101%

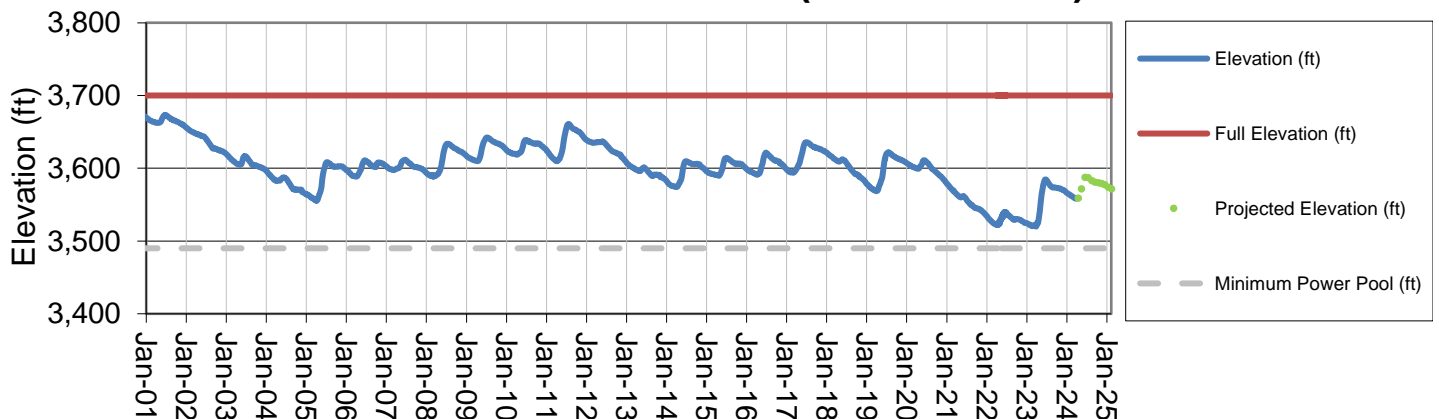

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 8th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 8th, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
