

WATER WATCH REPORT

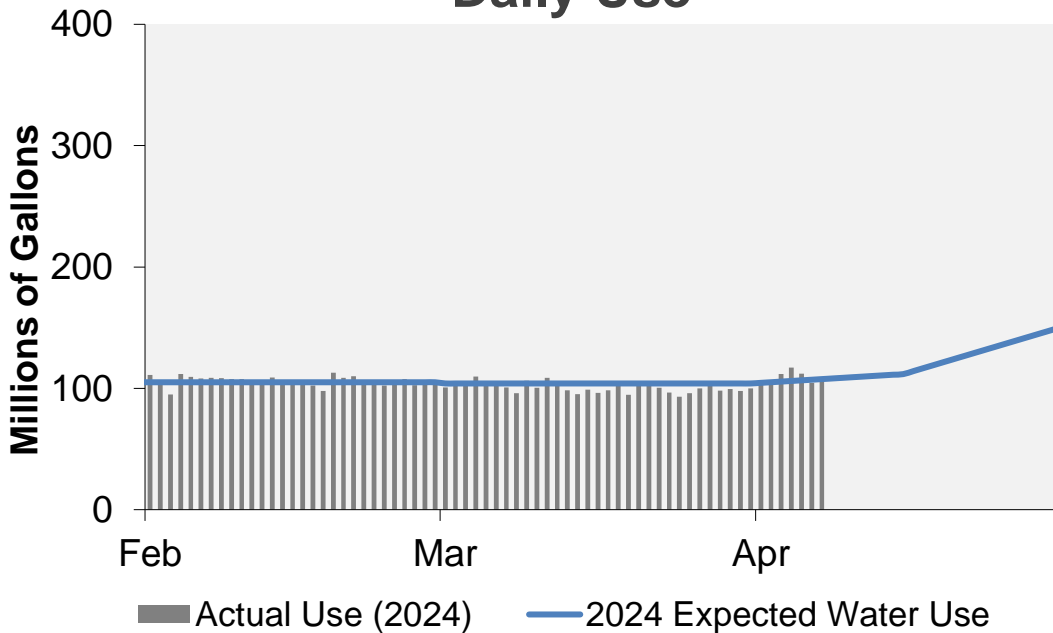

April 8, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last Year	Historical Median
	Total	Usable	Year		Median	
Antero	20,122	20,067	19,955	99%	101%	99%
Eleven Mile	97,779	97,779	100,243	103%	102%	102%
Cheesman	79,064	79,064	70,979	90%	81%	86%
Marston	19,108	13,133	7,140	54%	54%	63%
Strontia Springs	7,863	7,163	6,339	88%	85%	94%
Chatfield	28,709	12,415	12,414	100%	96%	96%
Dillon	257,304	249,095	209,340	84%	79%	86%
Gross*	41,811	29,811	4,467	15%	22%	30%
Ralston	10,776	7,276	5,809	80%	59%	57%
Meadow Creek	5,370	4,520	-	0%	0%	12%
Total	567,906	520,323	436,687	84%	80%	79%

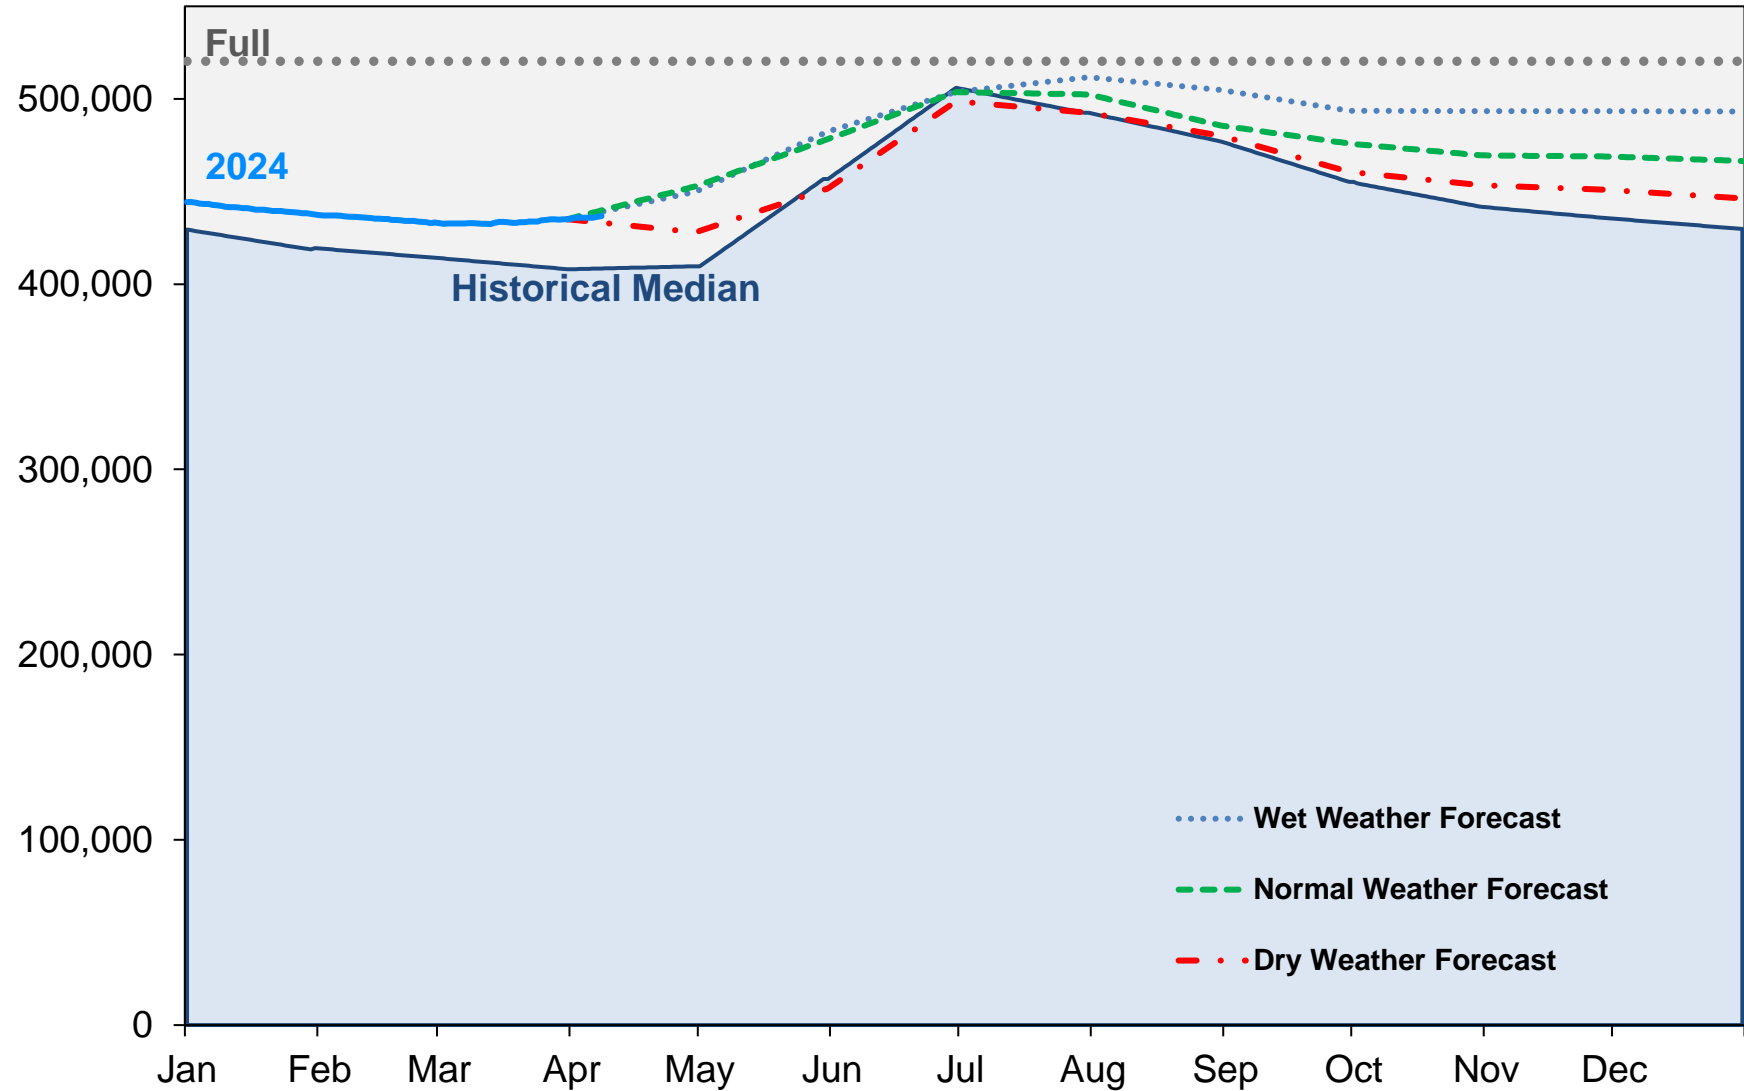

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Acre-Feet

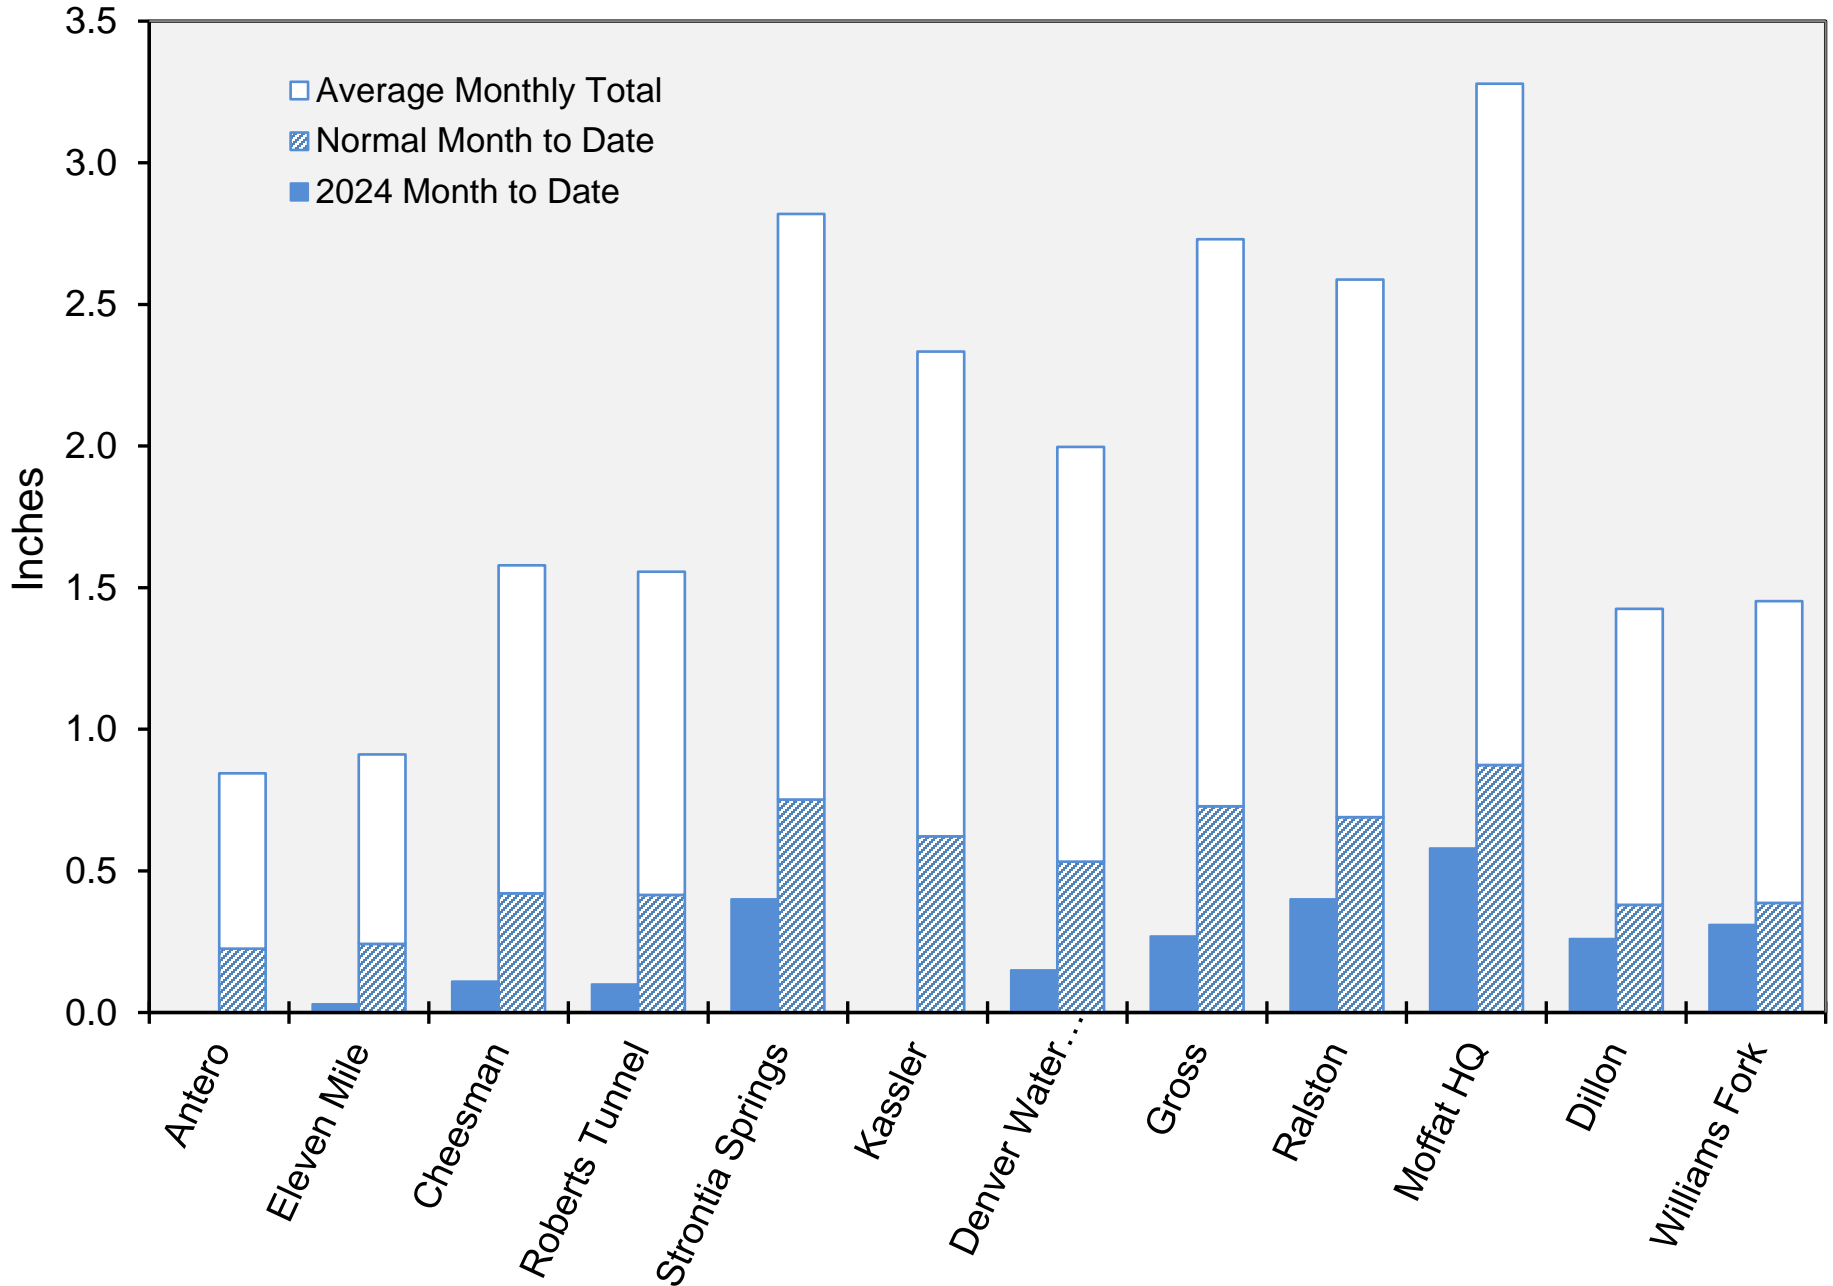

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

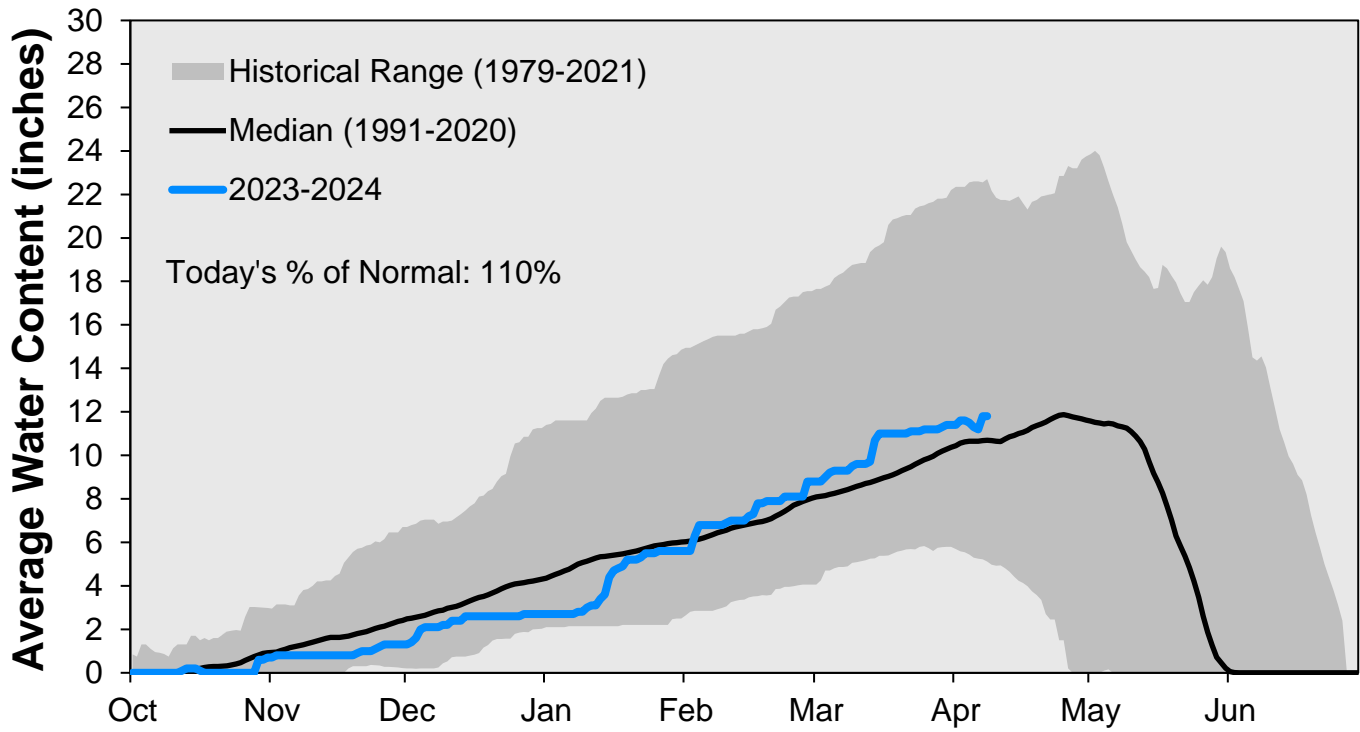

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

April 8, 2024

April Precipitation

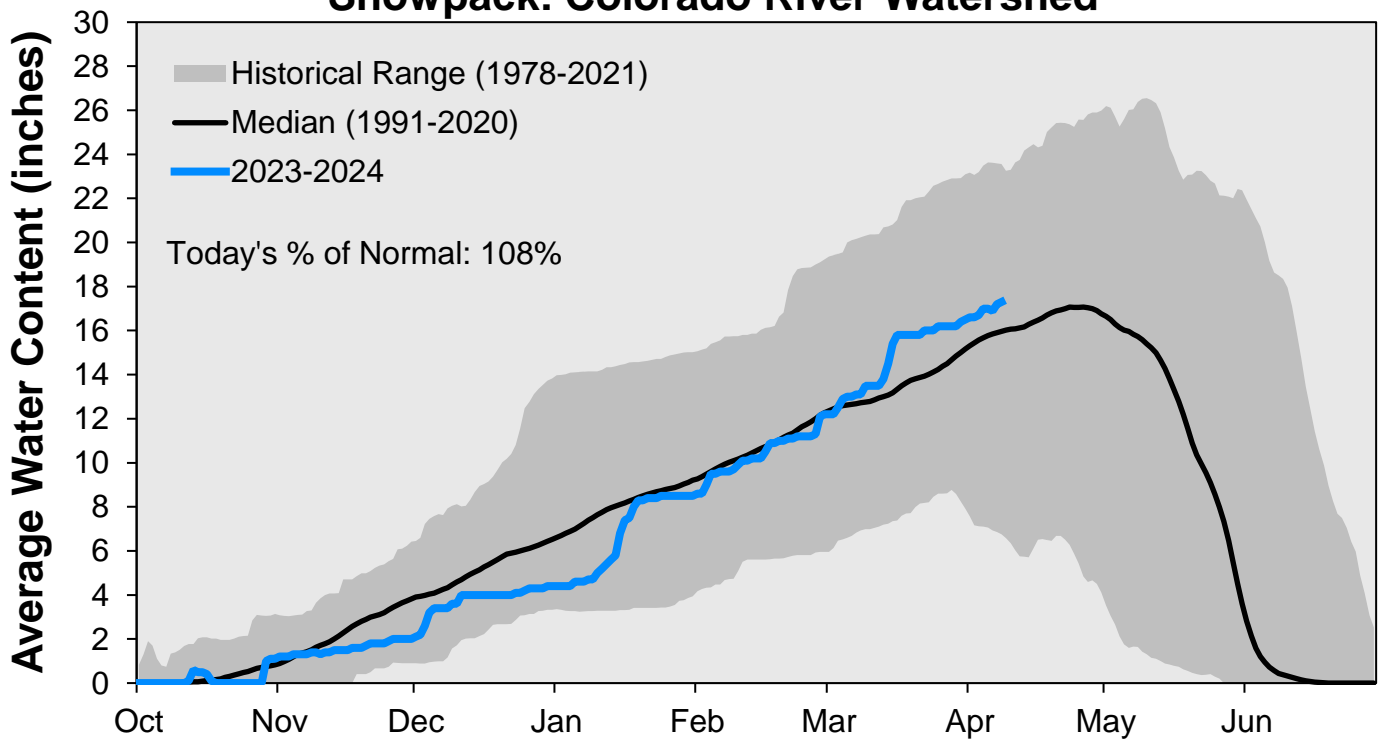

Snowpack: South Platte River Watershed

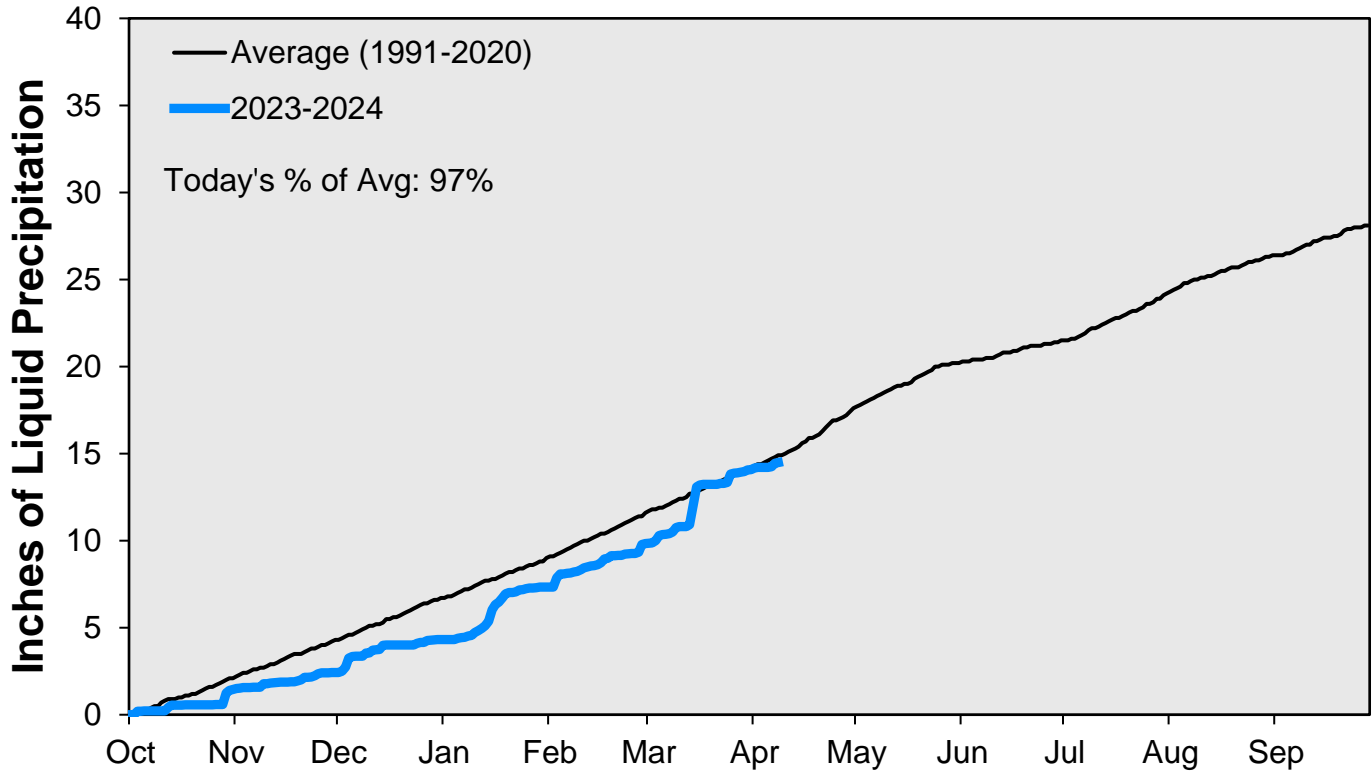

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Snowpack: Colorado River Watershed

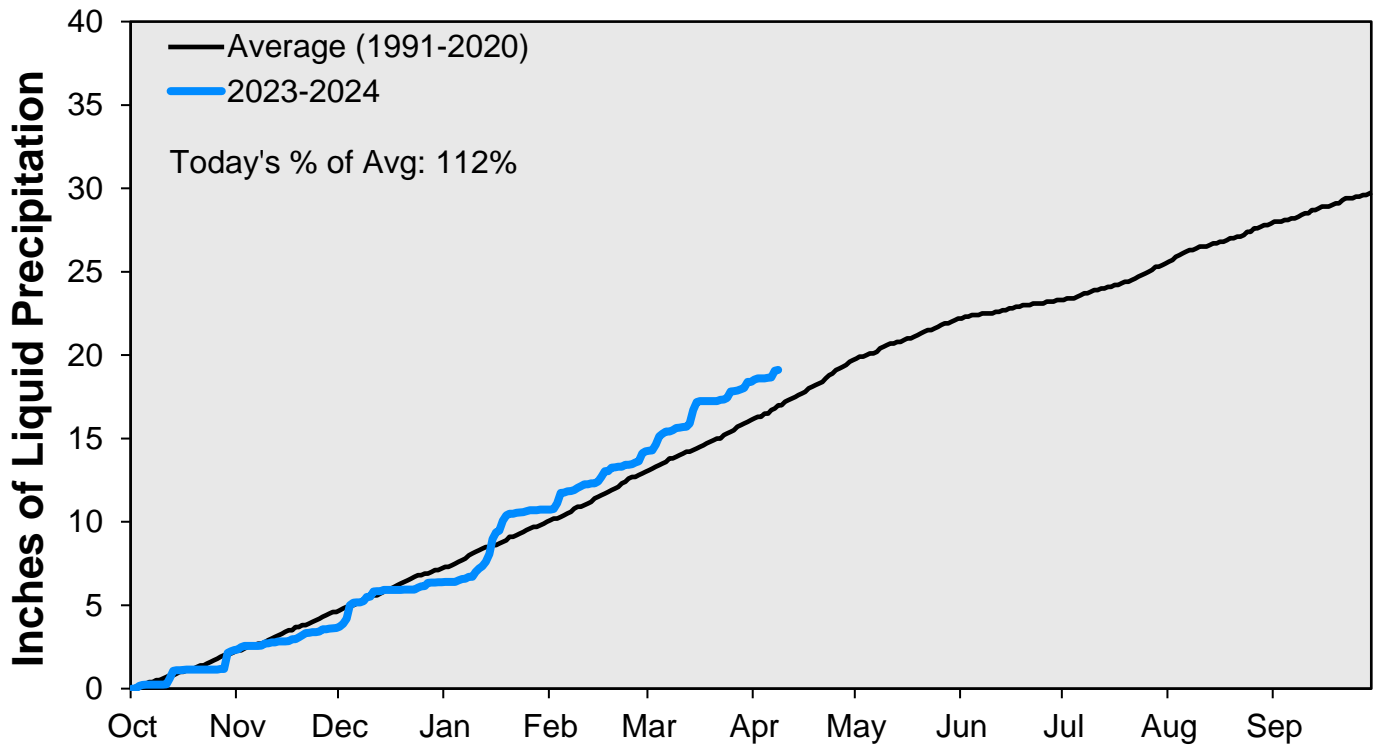

Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Cumulative Precipitation: South Platte River

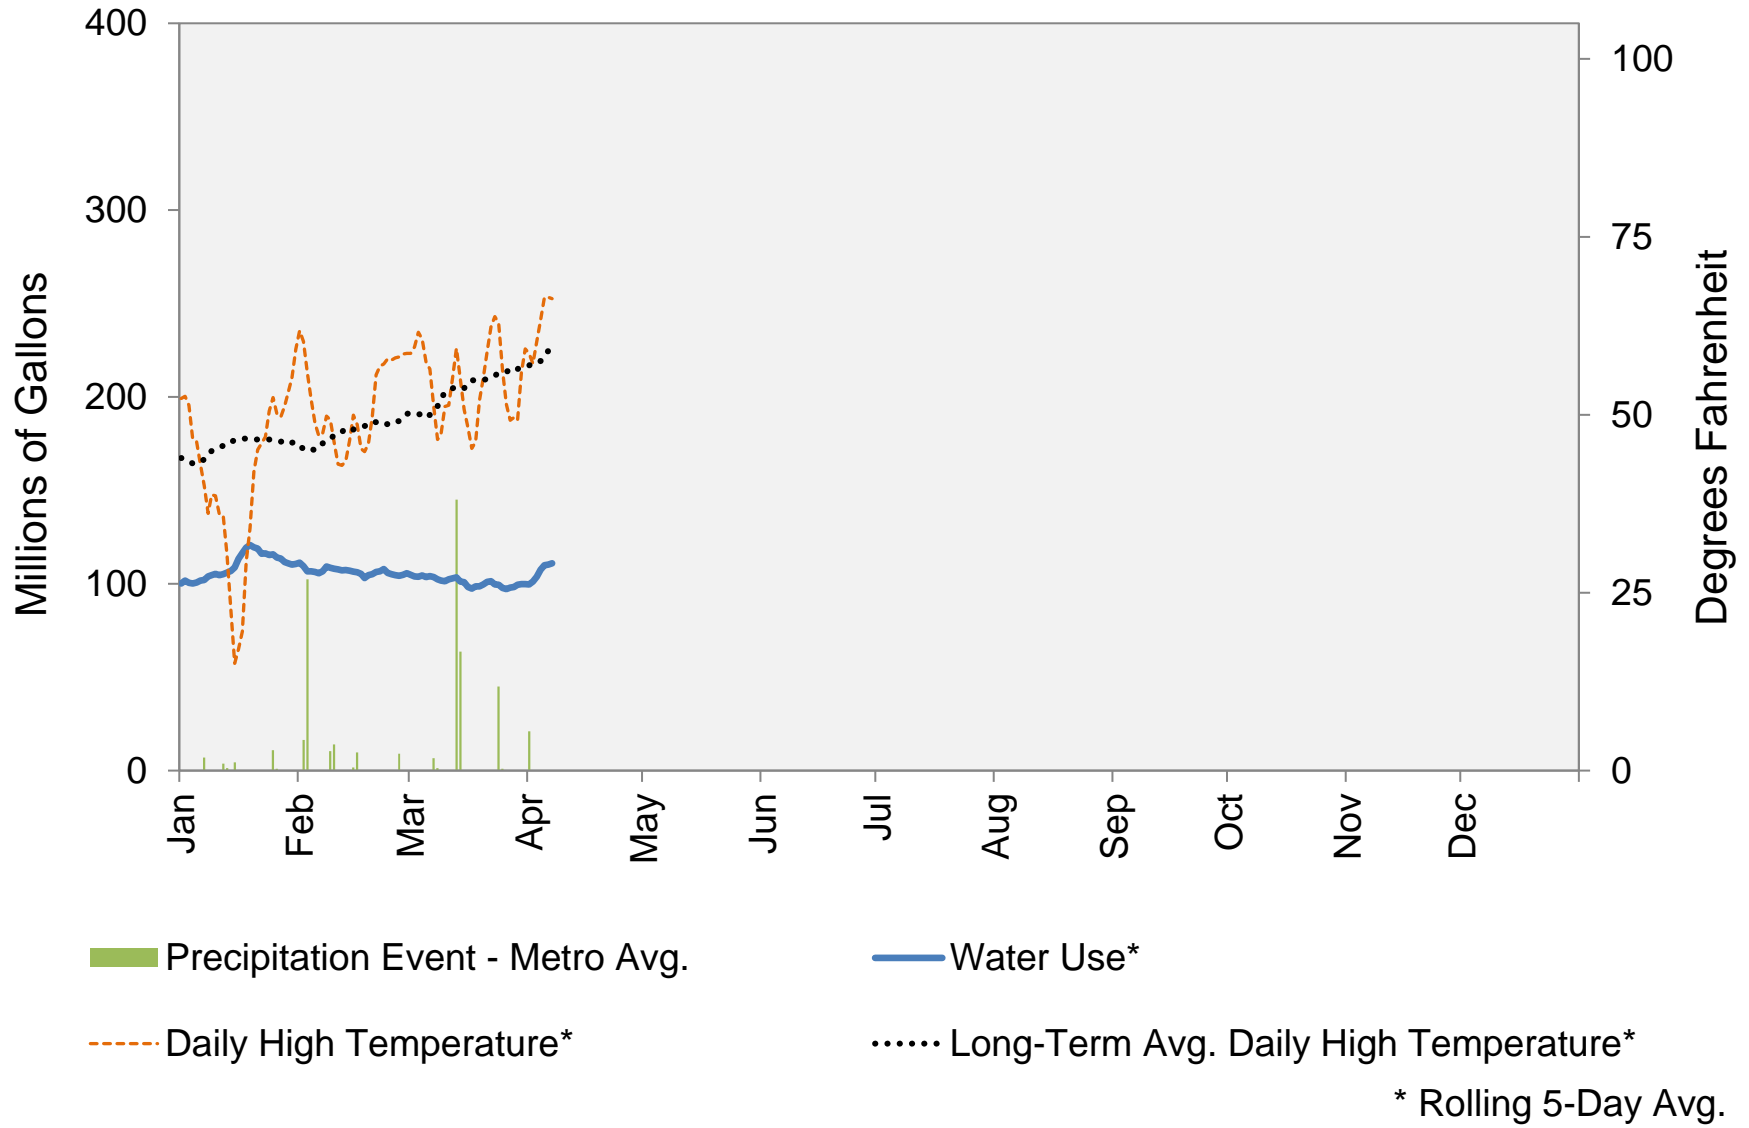

Cumulative Precipitation: Colorado River

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

2024 Water Use and Weather Conditions

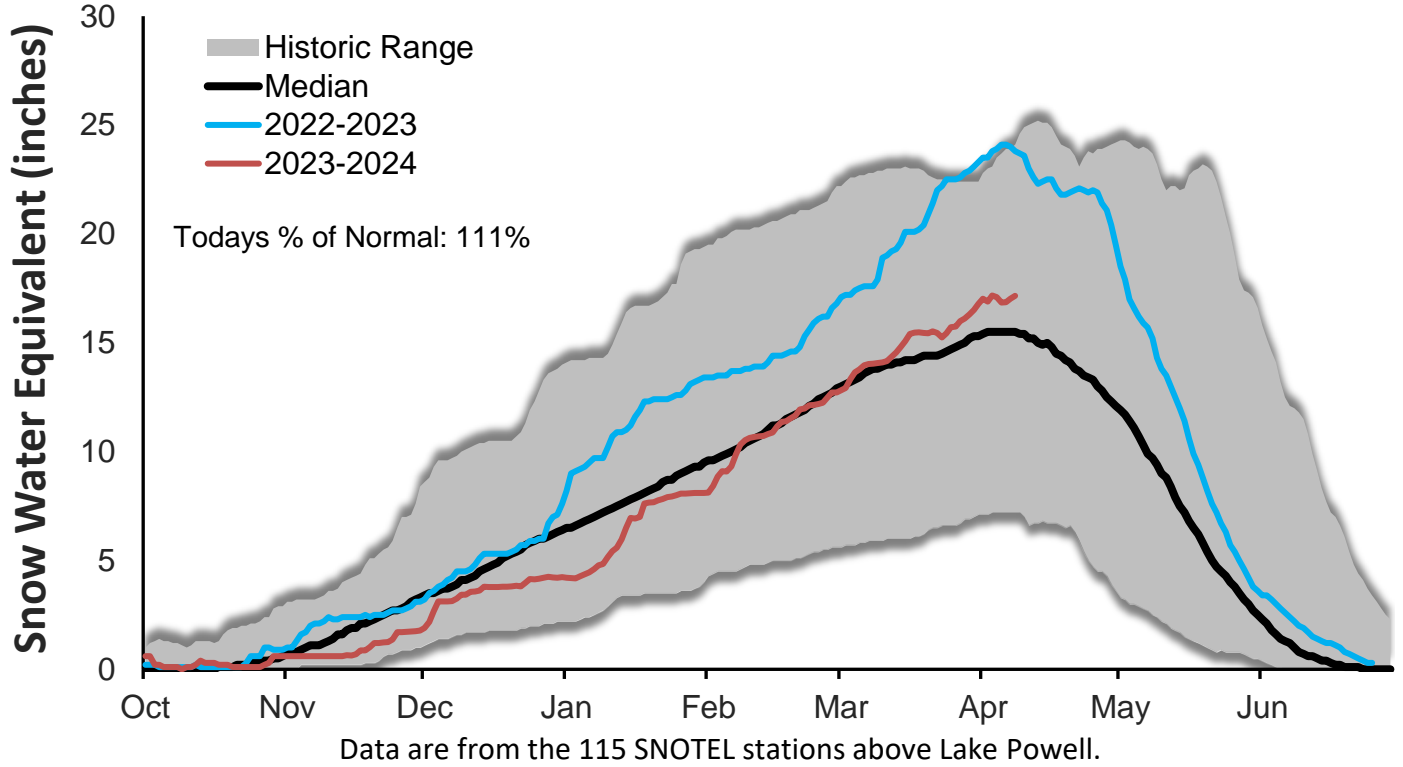

April 8, 2024

Denver Water Use and Reservoir Contents 2024													
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 518,449 AF)	452,800												
Actual End-of-Month Supply Reservoir Contents (AF)	437,644	433,227	435,044										
Actual % Full	84%	84%	84%										
Historical Median % Full	81%	80%	79%	79%	88%	98%	95%	92%	88%	85%	84%	83%	
2024 Expected Daily Use (MG)	105	105	104	120	190	267	312	304	277	170	111	105	106
Actual Daily Use (MG)	1	97	111	101	103								
	2	105	104	103	106								
	3	93	95	102	112								
	4	103	112	110	117								
	5	105	109	103	112								
	6	102	108	103	104

	31	112		100									
Monthly Average	110	106	100	109									106
% of 2023 Expected Daily Use	105%	101%	97%	91%									100%

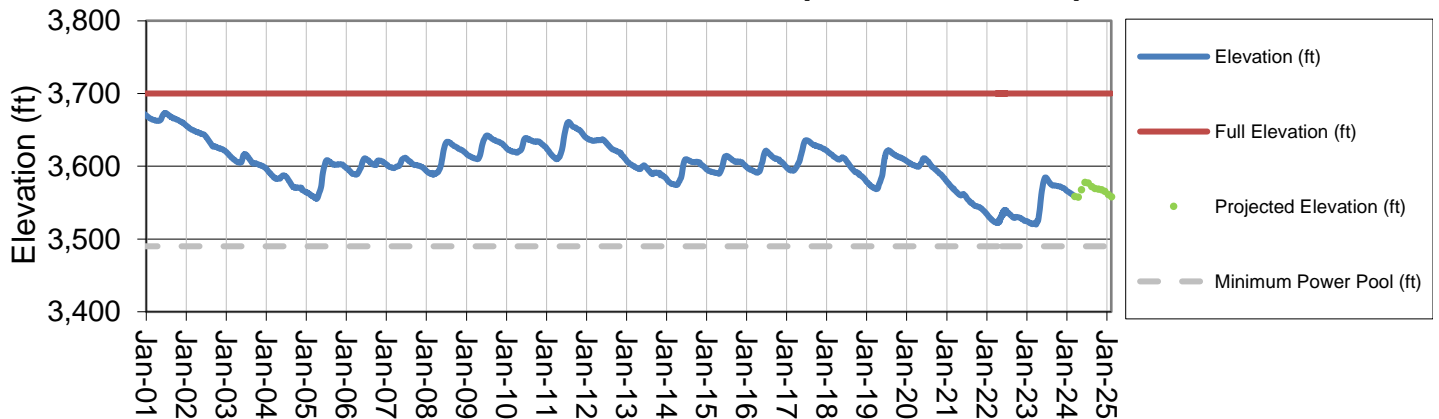

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 8th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 8th, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
