

WATER WATCH REPORT

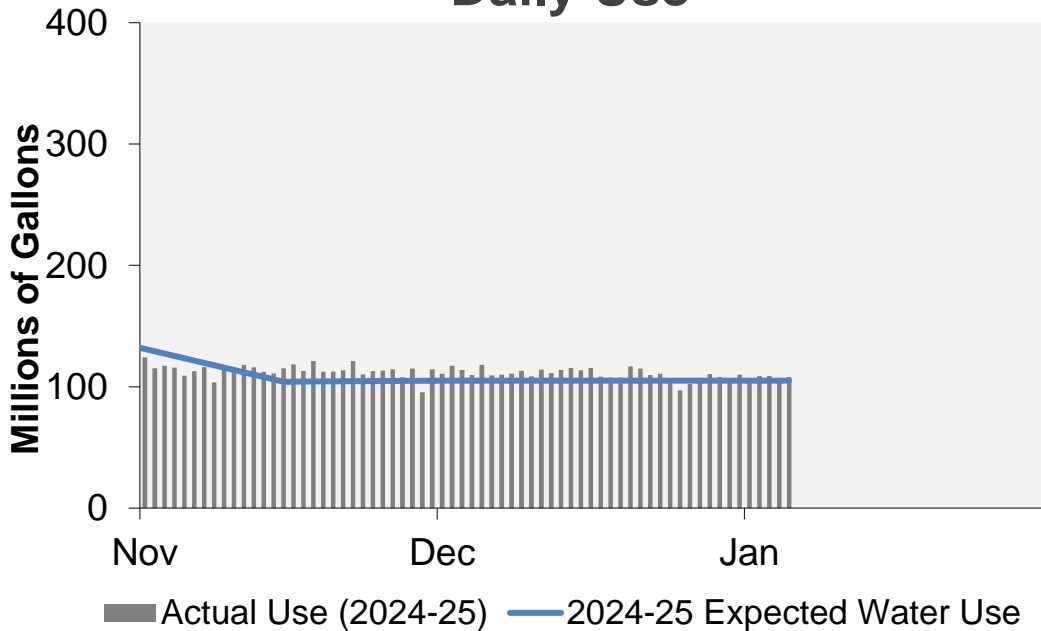

January 6, 2025

Supply Reservoir Contents

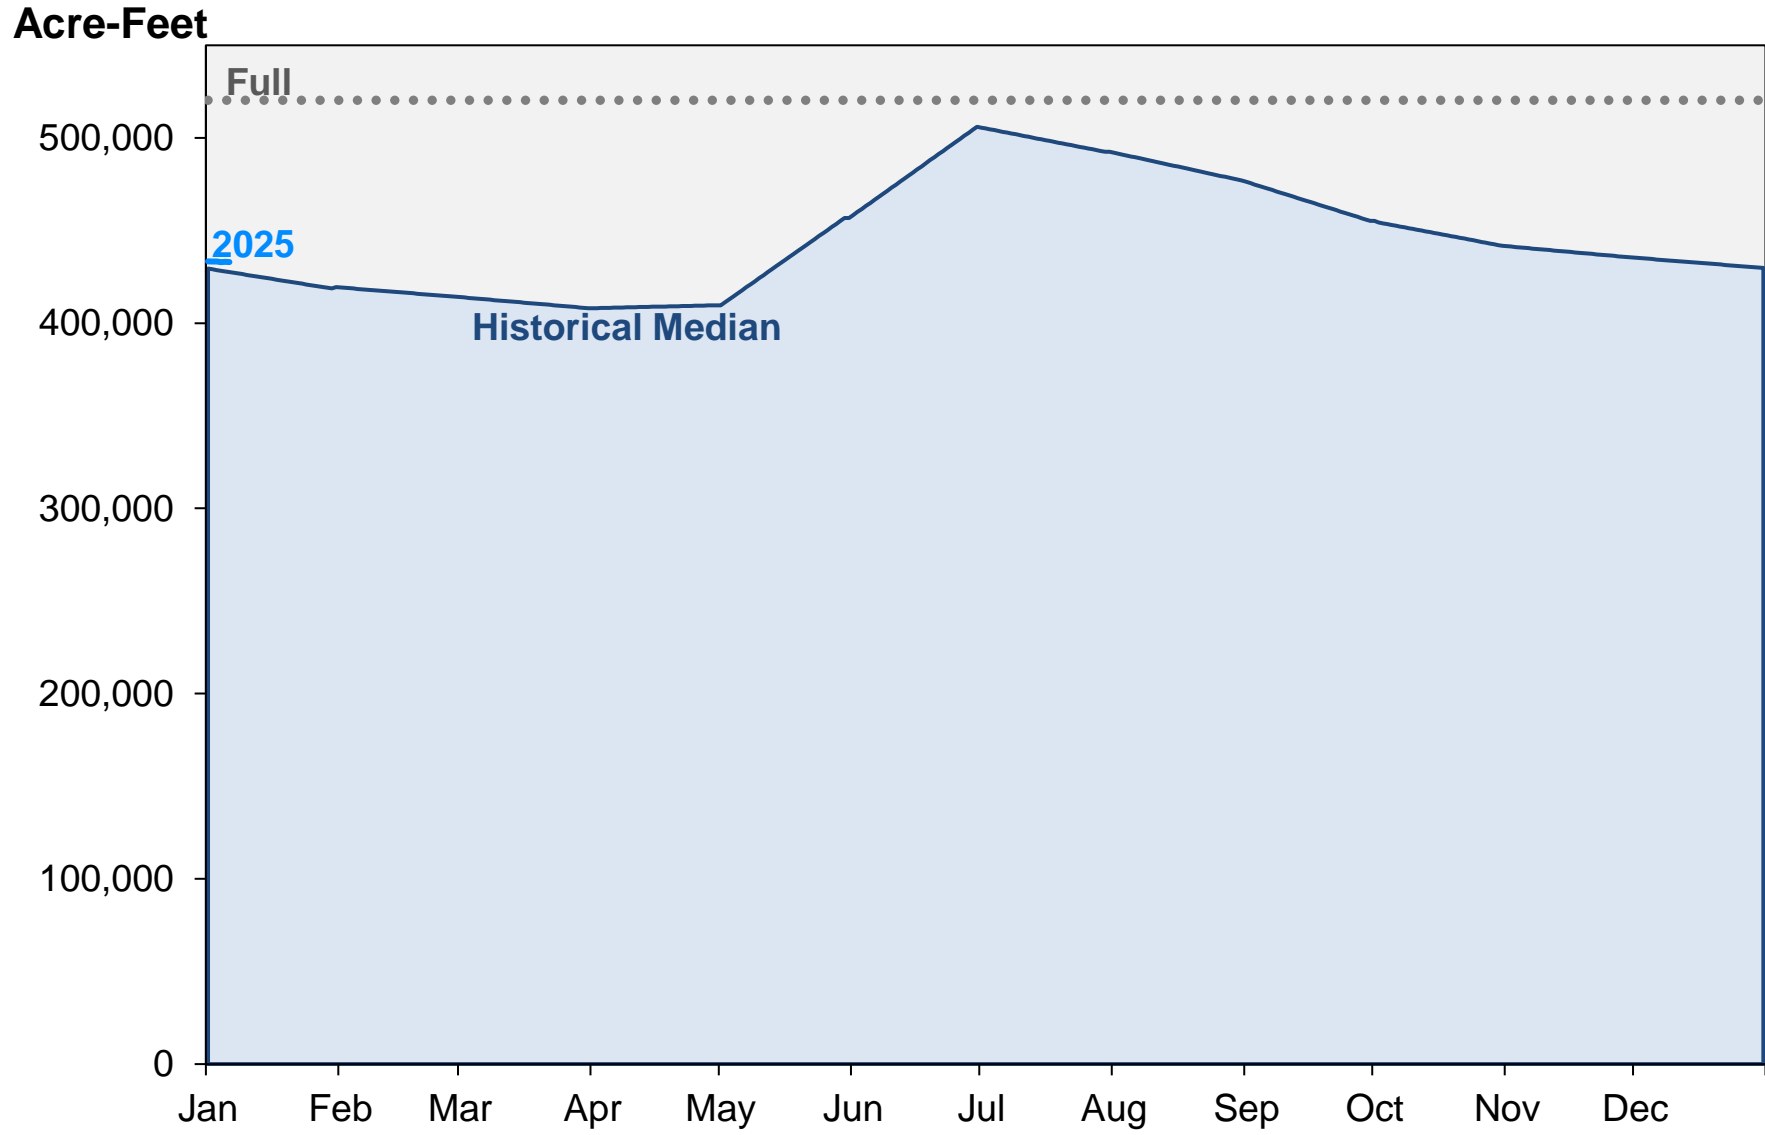

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last Year	Historical Median
	Total	Usable	Year		Median	
Antero	20,122	20,067	18,648	93%	100%	99%
Eleven Mile	97,779	97,779	100,347	103%	102%	101%
Cheesman	79,064	79,064	74,364	94%	92%	84%
Marston	19,108	13,133	11,169	85%	74%	54%
Strontia Springs	7,863	7,163	6,009	84%	81%	93%
Chatfield	28,709	12,415	8,756	71%	99%	73%
Dillon	257,304	249,095	201,128	81%	85%	91%
Gross*	41,811	29,811	7,099	24%	17%	54%
Ralston	10,776	7,276	5,636	77%	82%	71%
Meadow Creek	5,370	4,520	-	0%	0%	17%
Total	567,906	520,323	433,156	83%	85%	83%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

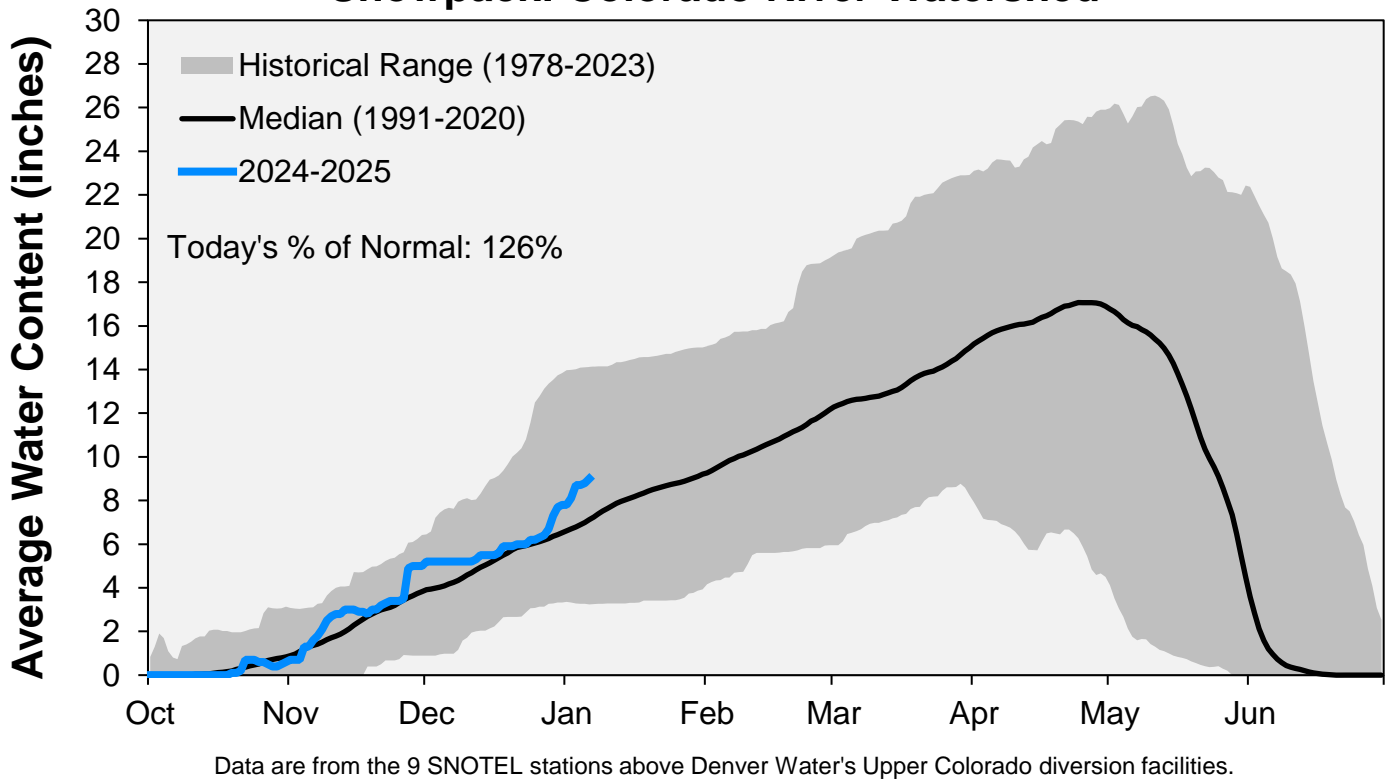

January Precipitation

Snowpack: South Platte River Watershed

Snowpack: Colorado River Watershed

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after December 9th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on December 9th, 2024. 6) Daily water figures are subject to change.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after January 6th, 2025. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on January 6th, 2025. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
