

WATER WATCH REPORT

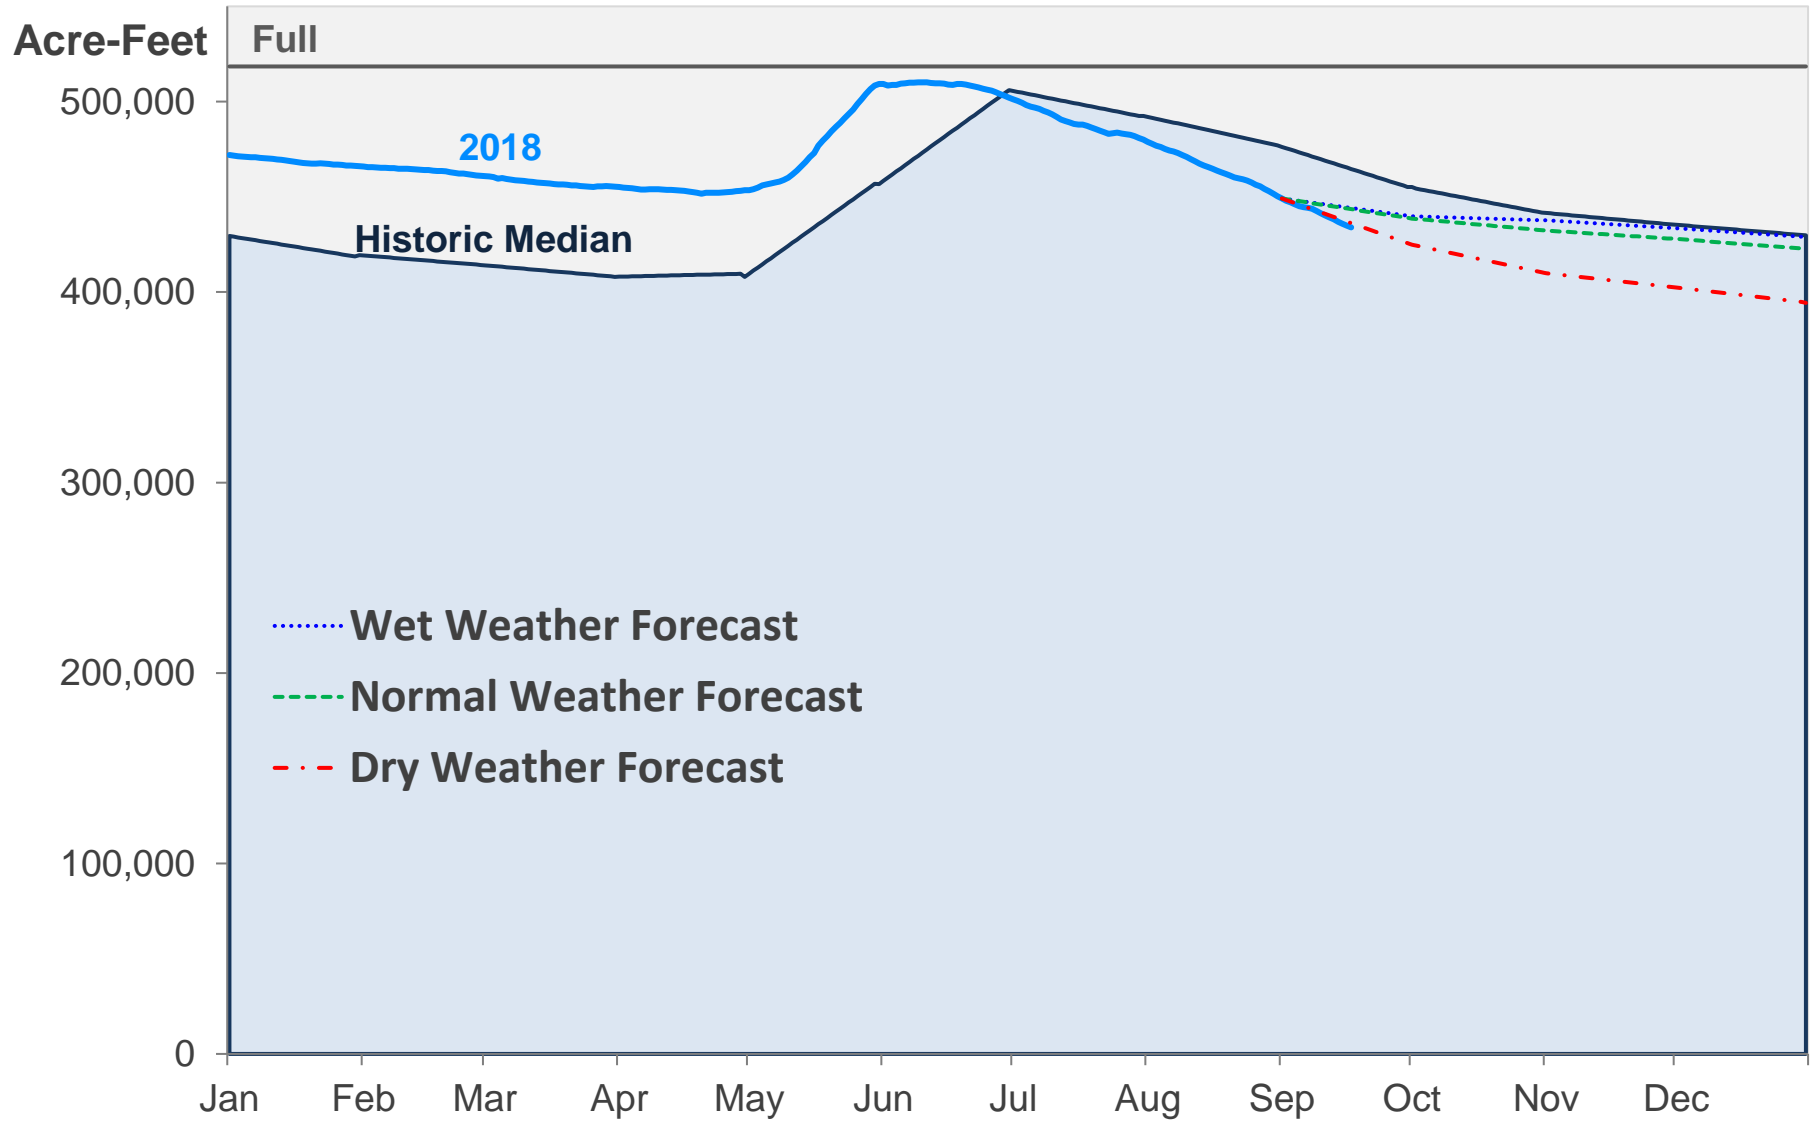

September 17, 2018

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Last Year	Historic Median	
	Total	Usable	Current			
Antero	19,881	19,826	18,817	95%	99%	99%
Eleven Mile	97,779	97,779	99,692	102%	102%	102%
Cheesman	79,064	79,064	54,820	69%	98%	89%
Marston	19,256	13,133	11,922	91%	91%	54%
Strontia Springs	7,863	7,163	6,466	90%	90%	93%
Chatfield	27,076	10,782	9,462	88%	53%	51%
Dillon	257,304	249,095	204,681	82%	96%	97%
Gross	41,811	29,811	20,274	68%	78%	80%
Ralston	10,776	7,276	5,993	82%	64%	77%
Meadow Creek	5,370	4,520	1,825	40%	27%	57%
Total	566,180	518,449	433,952	84%	95%	90%

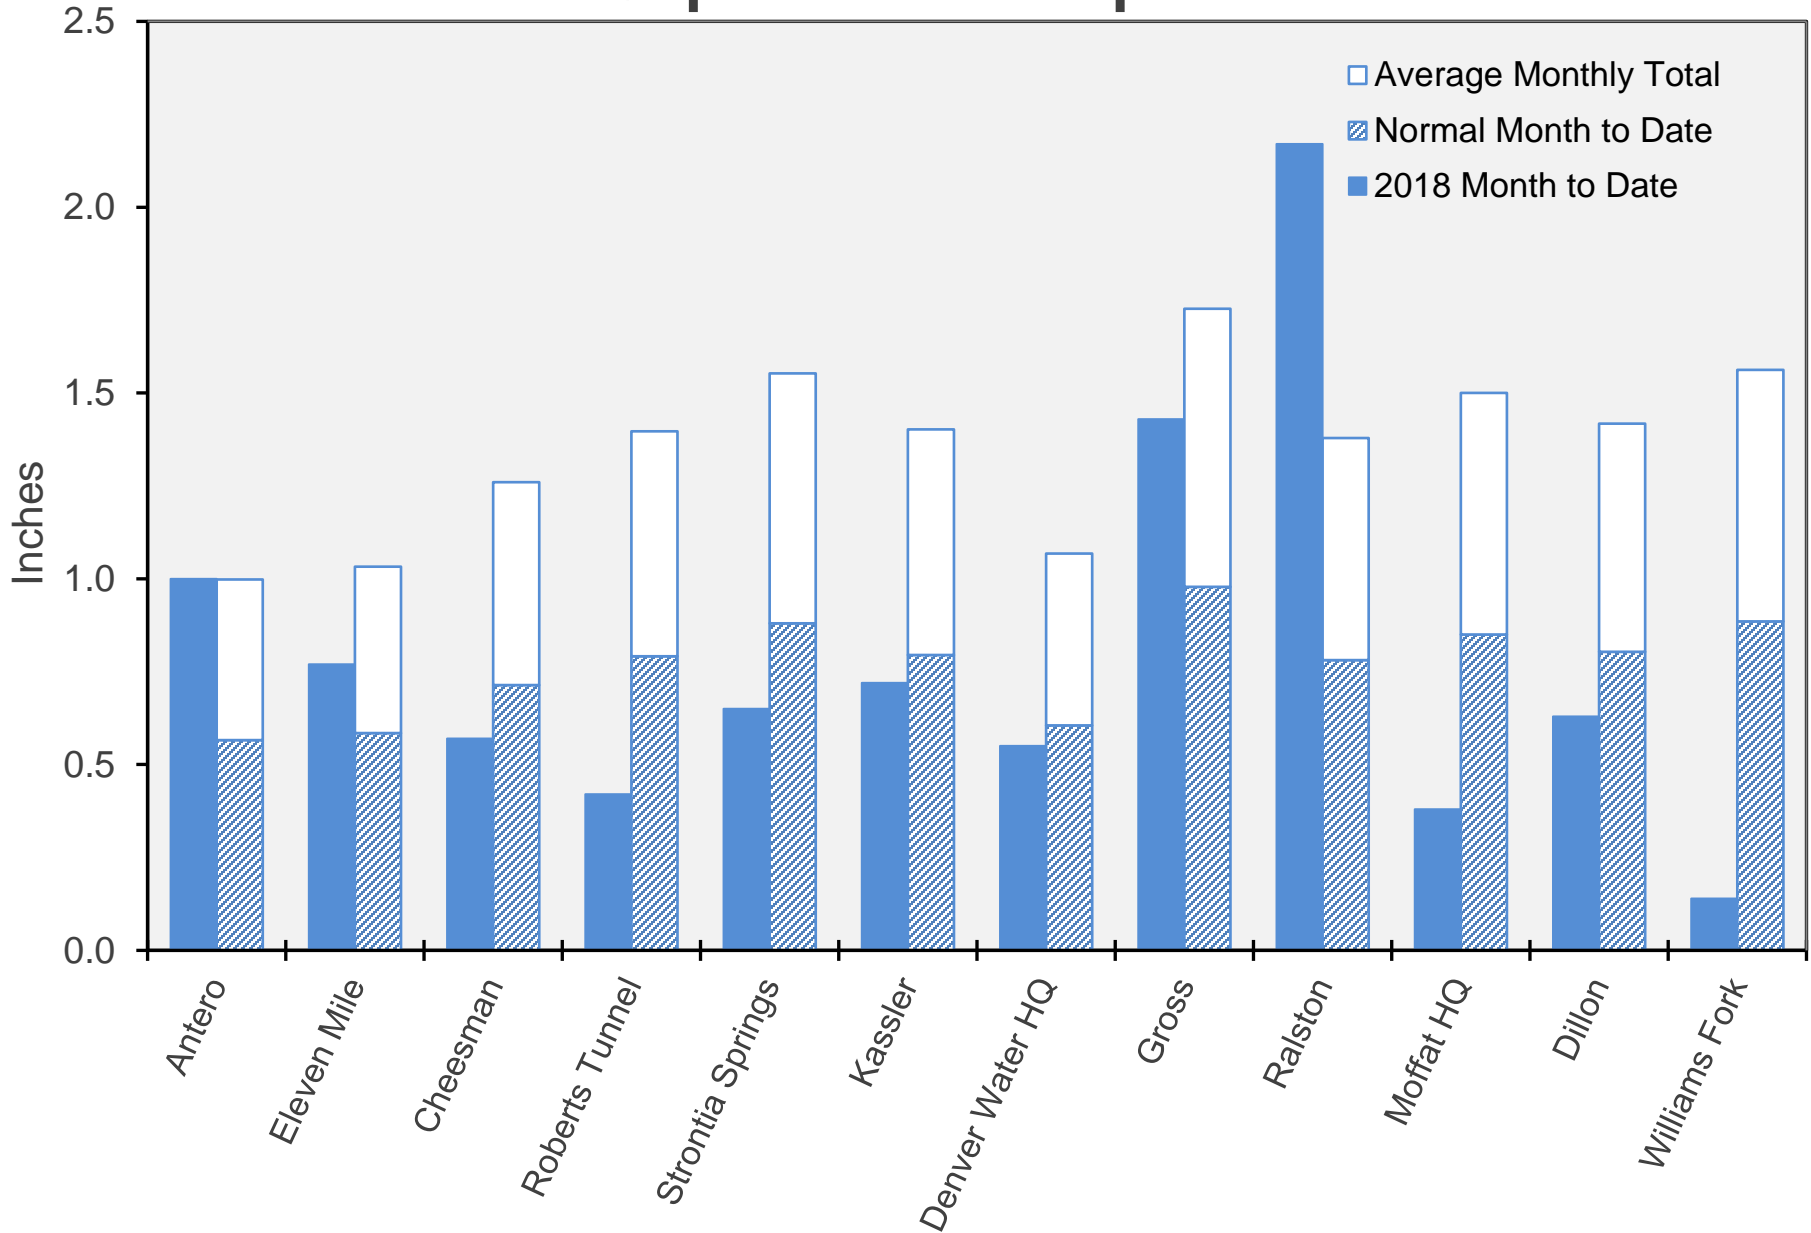

Supply Reservoir Contents

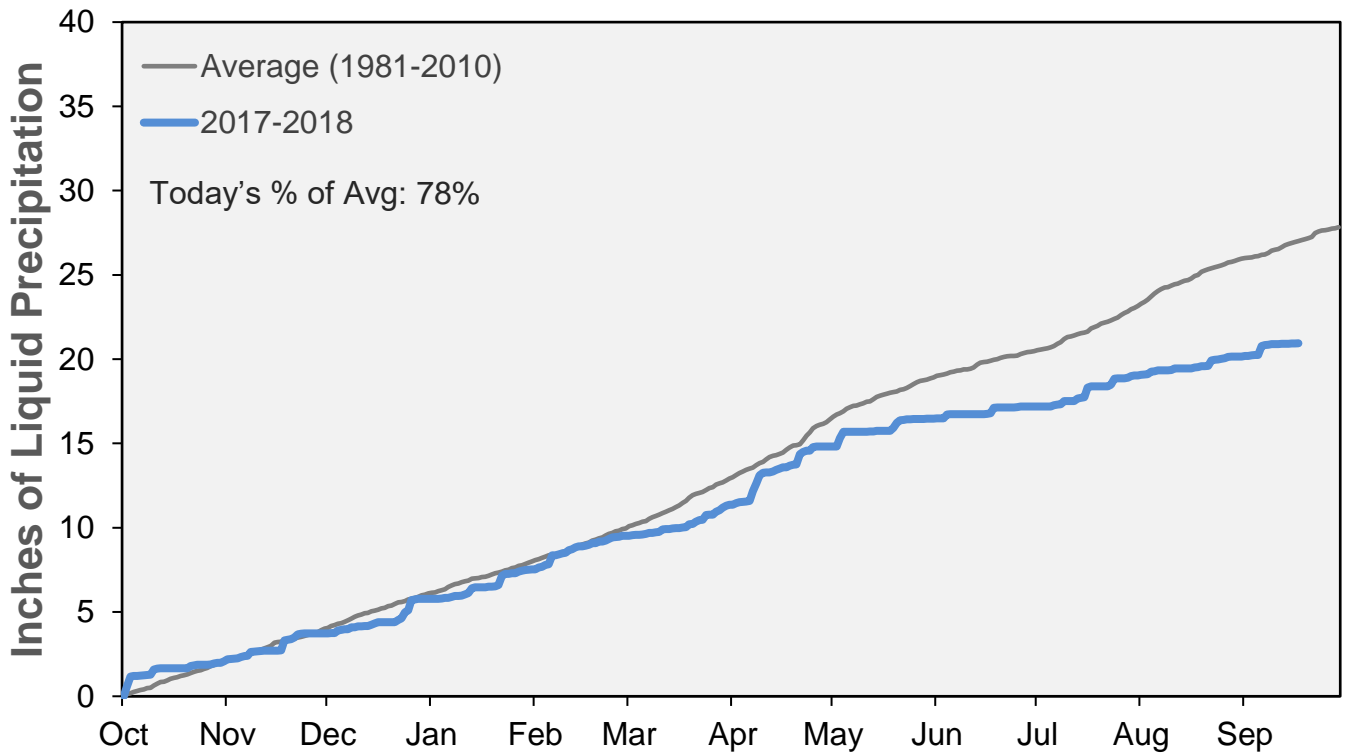

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

September Precipitation

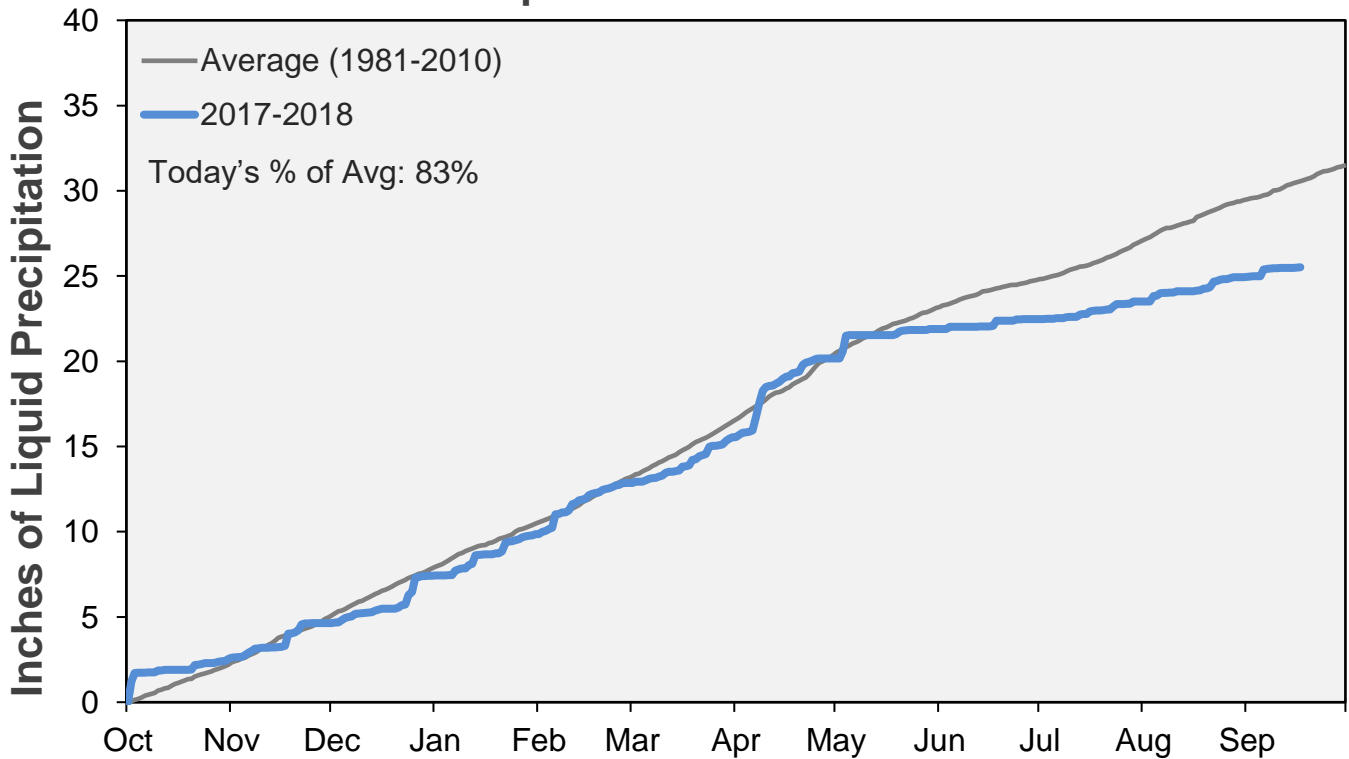

Cumulative Precipitation: South Platte River Watershed

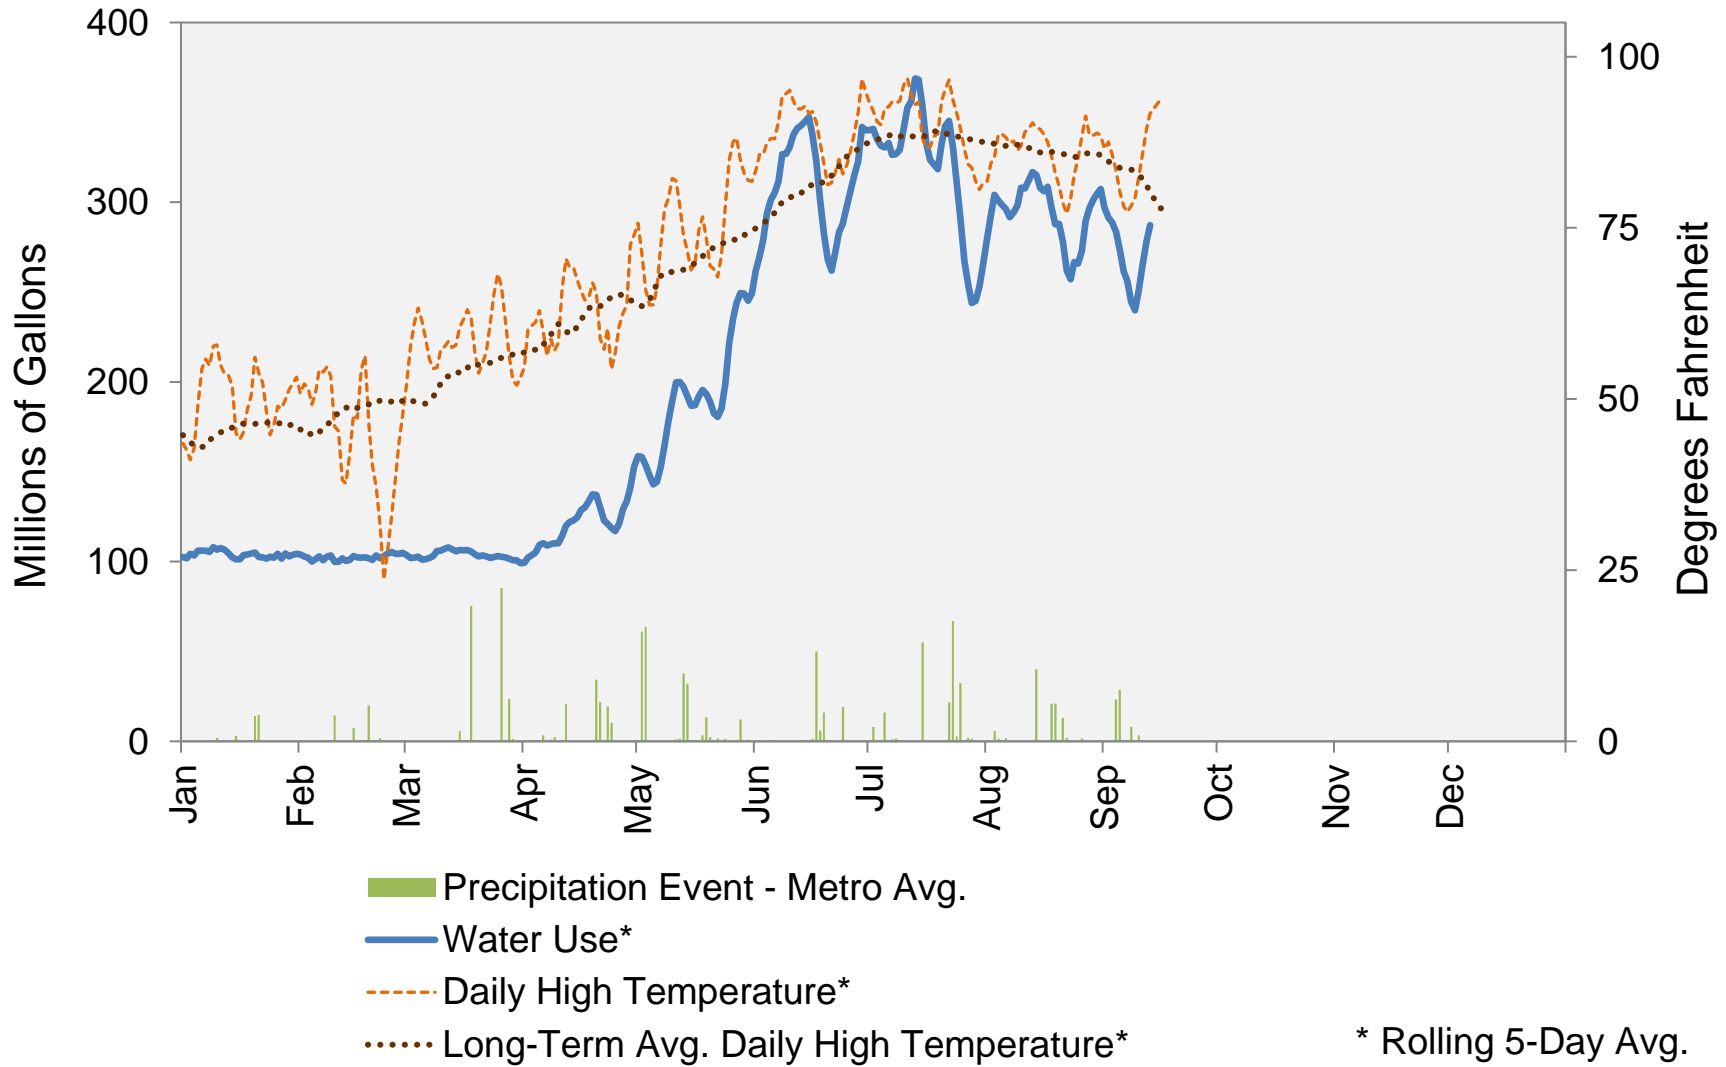

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Cumulative Precipitation: Colorado River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

2018 Water Use and Weather Conditions

September 17, 2018

Denver Water Use and Reservoir Contents 2018													
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reserv Contents (Full = 518,449 AF)	438,600

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after August 1, 2018. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on August 6, 2018. 6) Daily water figures are subject to change.
