

WATER WATCH REPORT

October 7, 2019

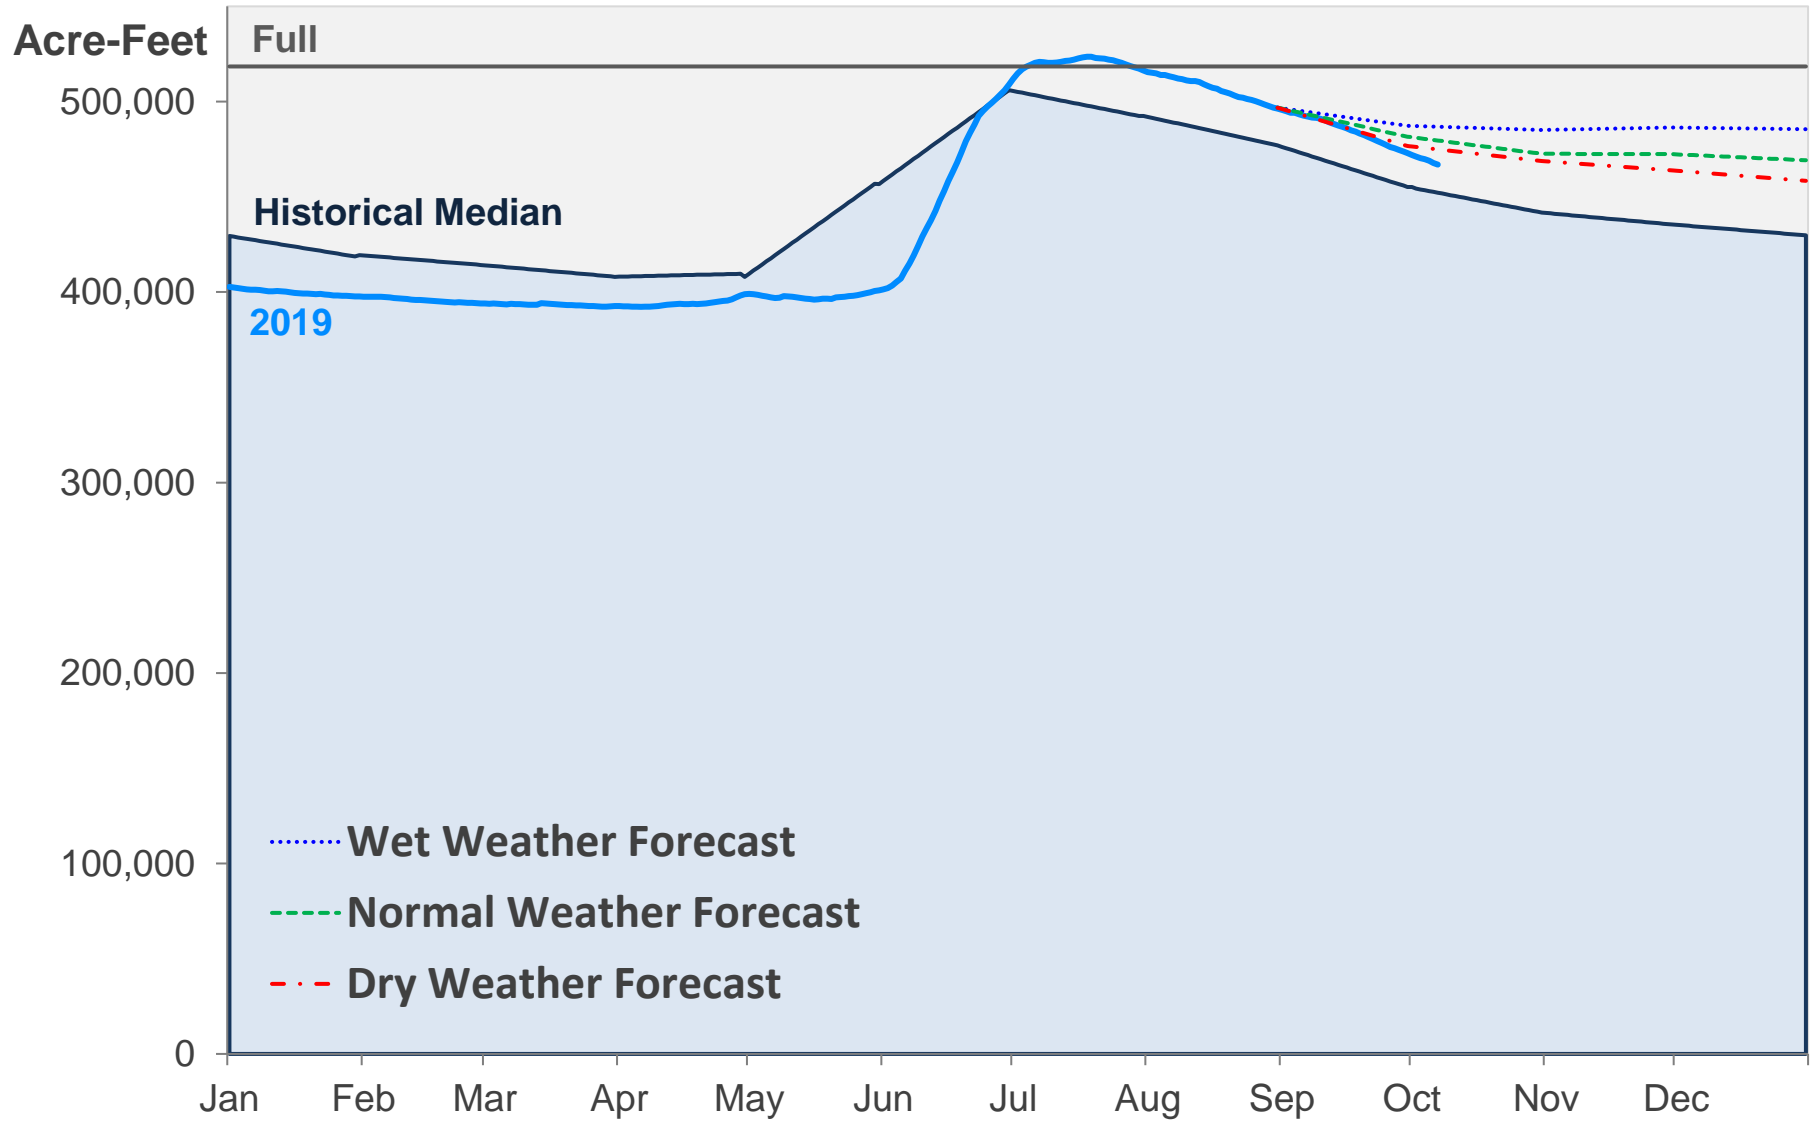

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Last Year	Historical Median	
	Total	Usable	Current			
Antero	19,881	19,826	18,986	96%	93%	99%
Eleven Mile	97,779	97,779	99,486	102%	102%	102%
Cheesman	79,064	79,064	62,515	79%	67%	85%
Marston	19,256	13,133	10,425	79%	90%	46%
Strontia Springs	7,863	7,163	6,198	87%	86%	93%
Chatfield	27,076	10,782	4,602	43%	82%	49%
Dillon	257,304	249,095	233,792	94%	77%	96%
Gross	41,811	29,811	26,945	90%	74%	77%
Ralston	10,776	7,276	3,892	53%	64%	68%
Meadow Creek	5,370	4,520	0	0%	15%	39%
Total	566,180	518,449	466,841	90%	80%	87%

Daily Use

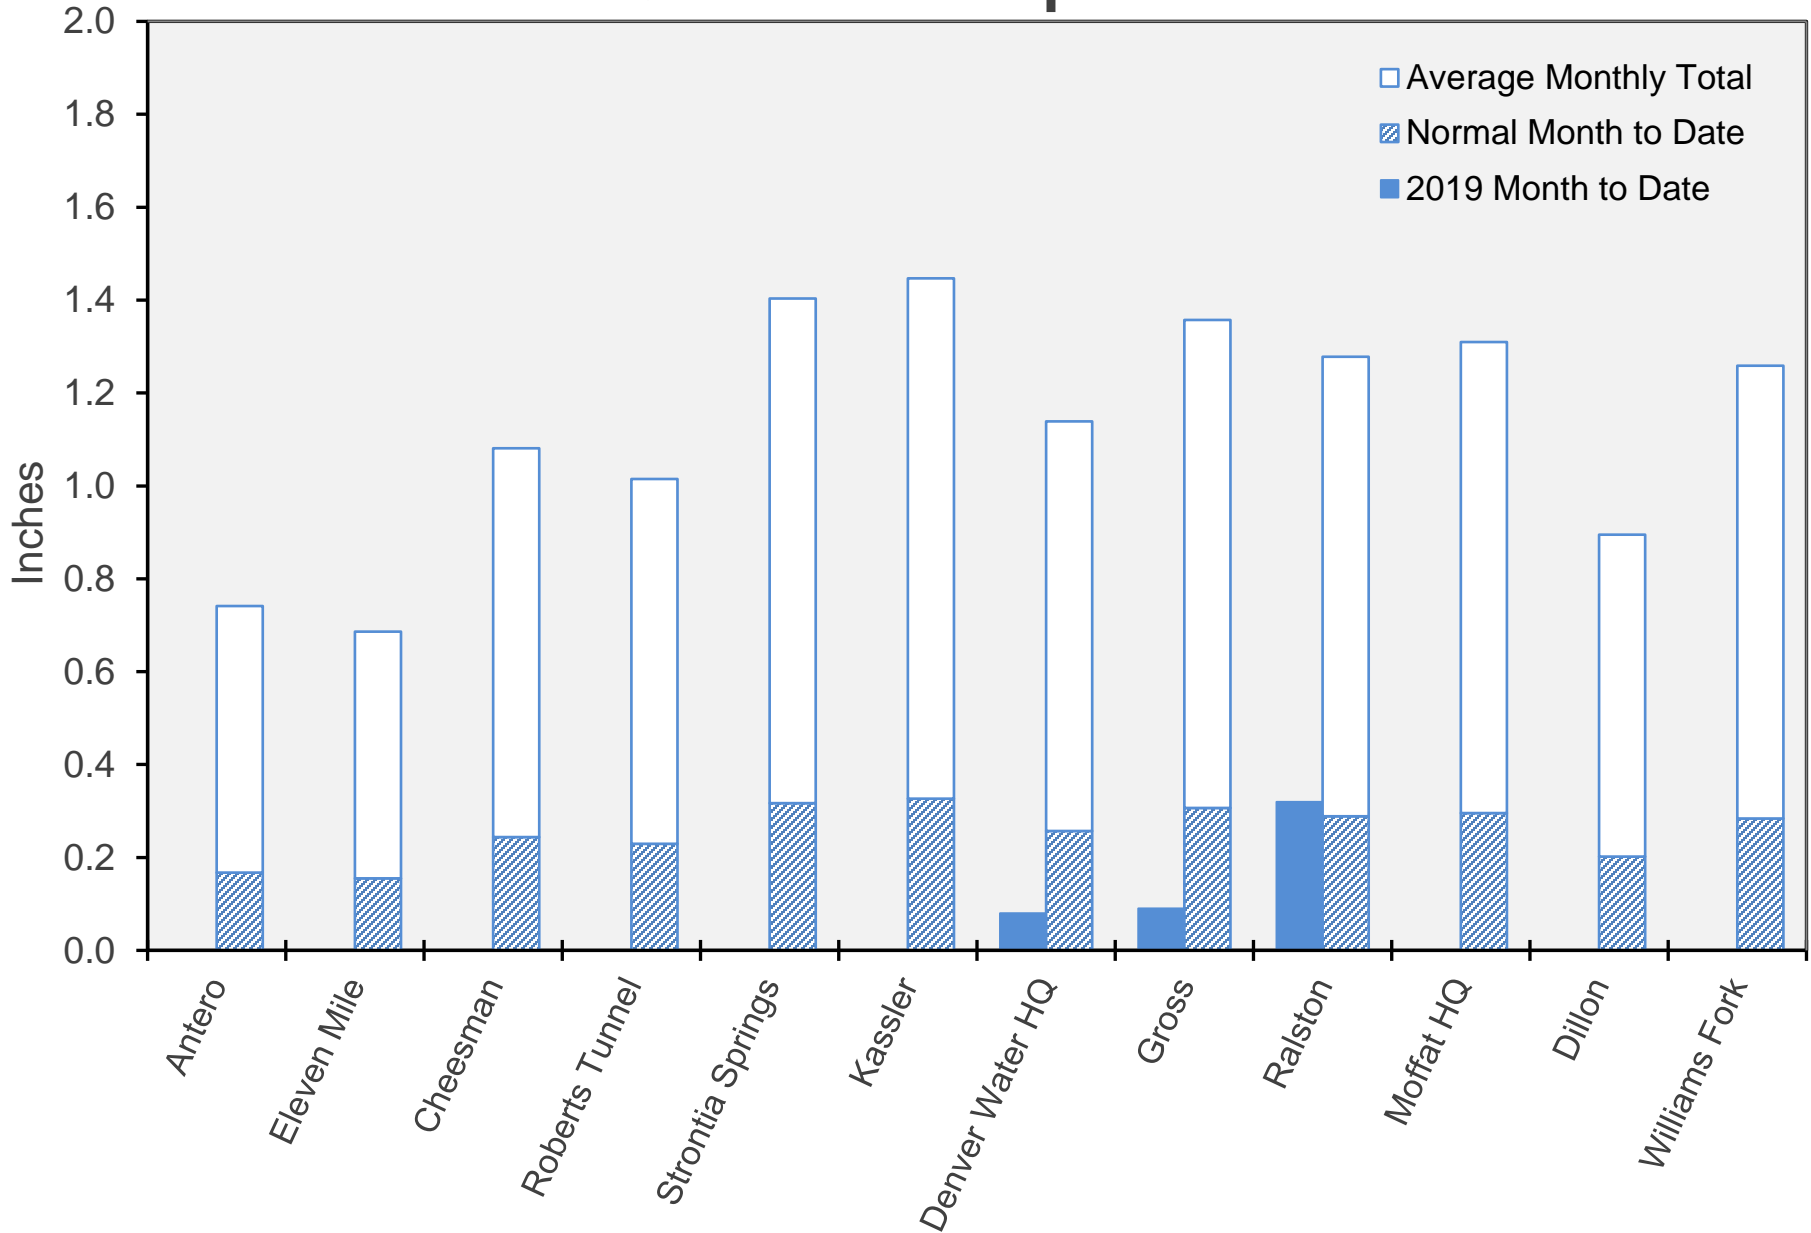

Supply Reservoir Contents

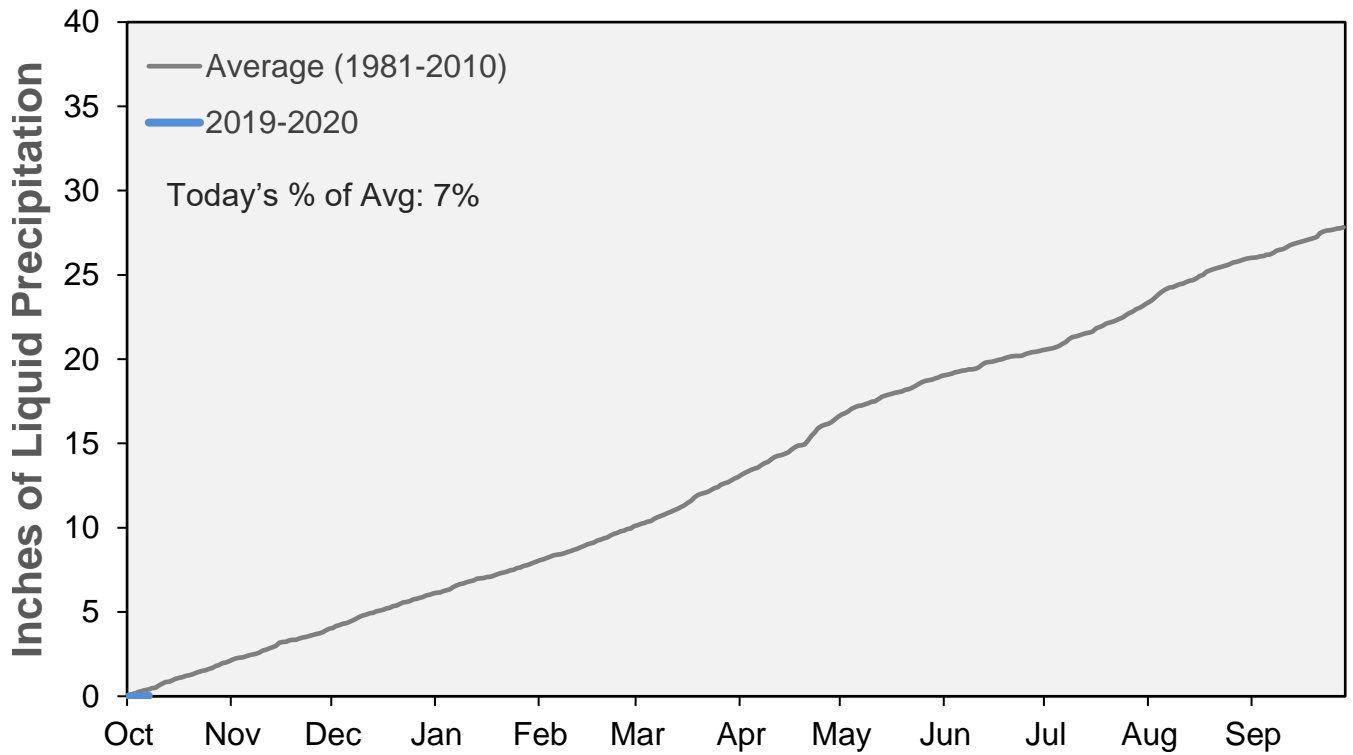

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

October 7, 2019

October Precipitation

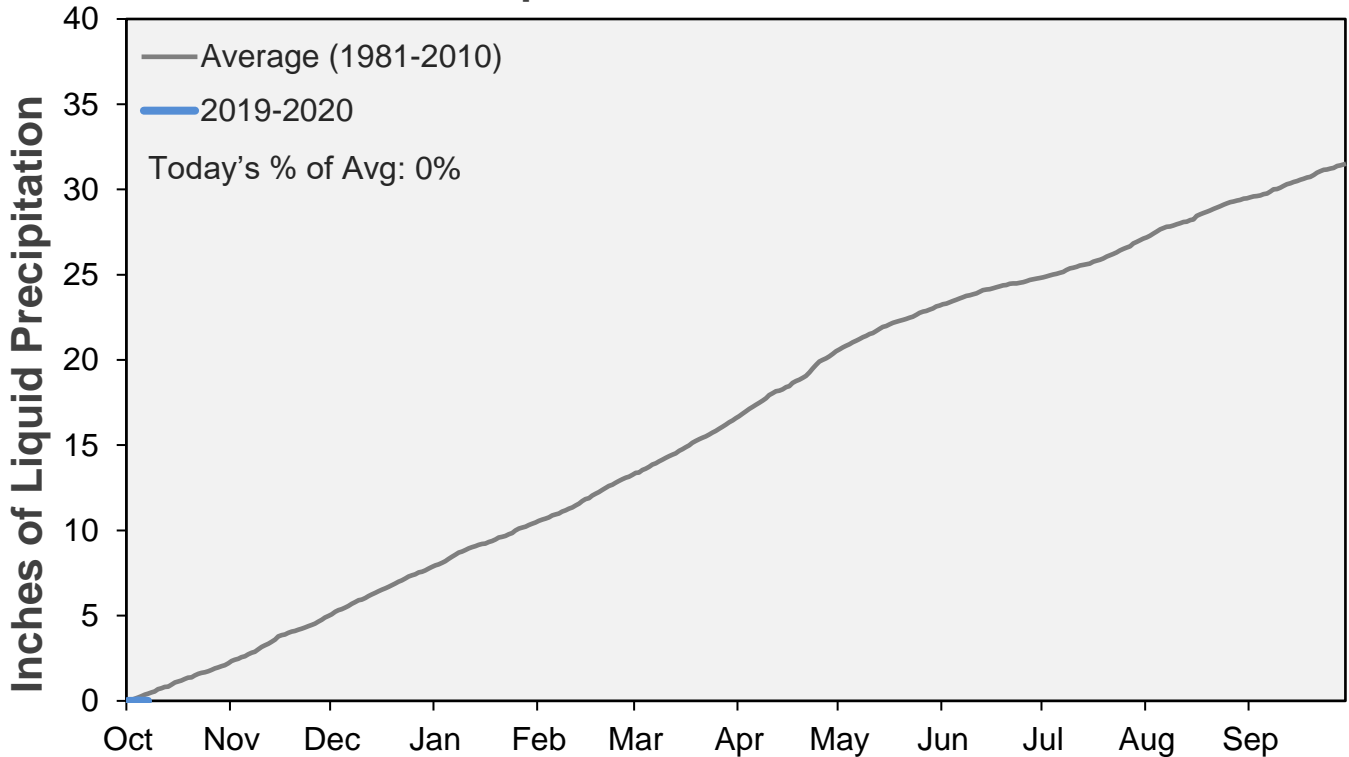

Cumulative Precipitation: South Platte River Watershed

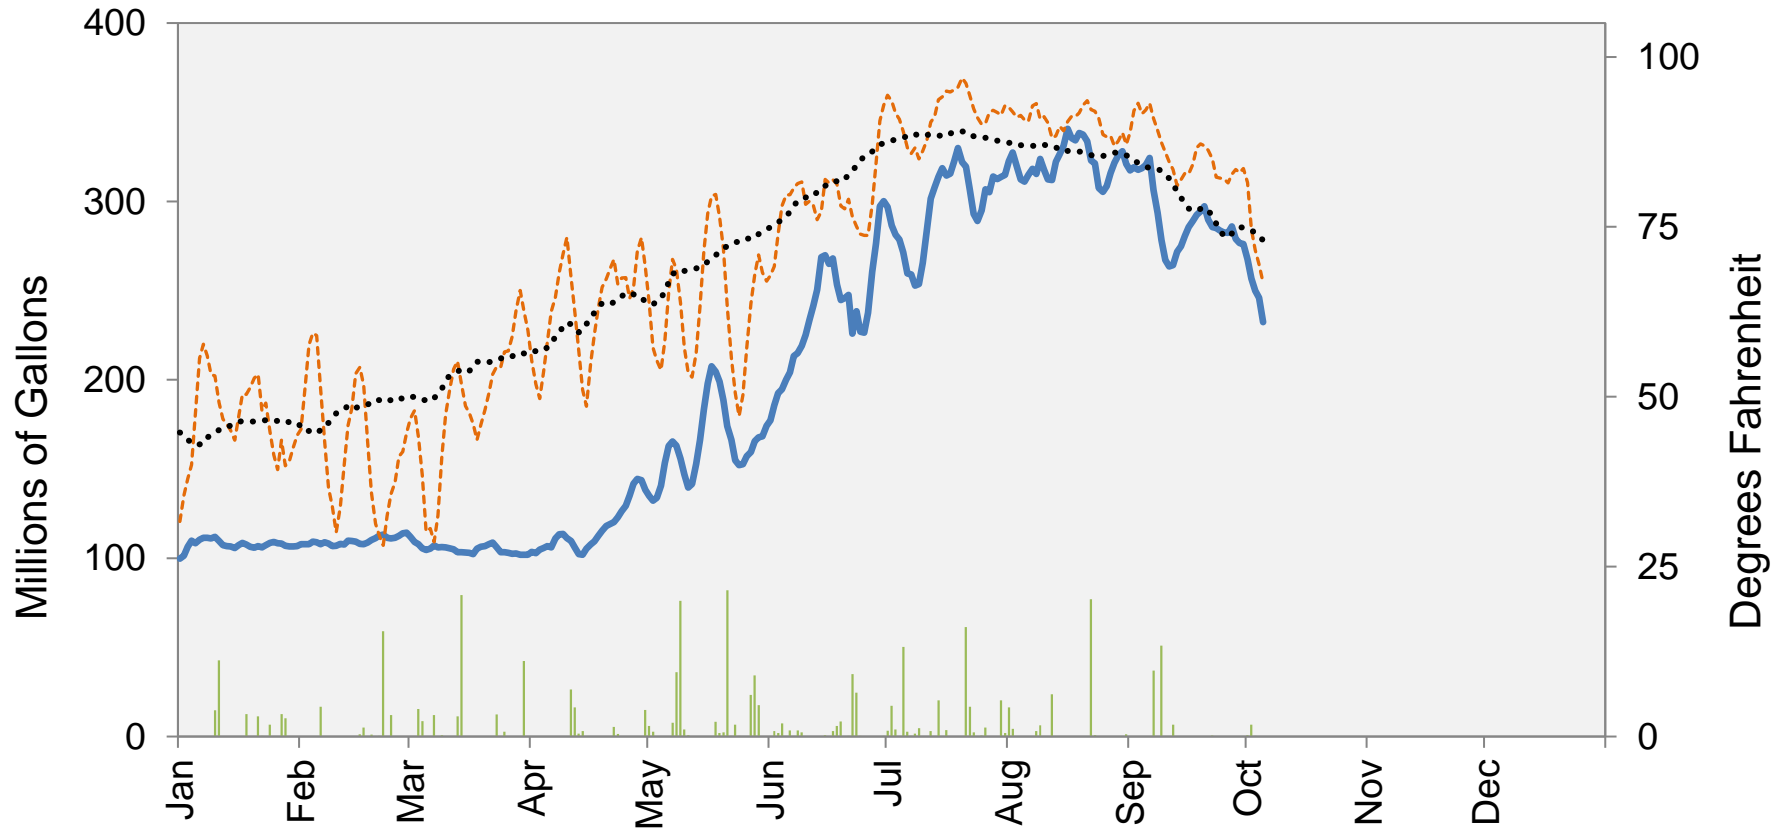

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Cumulative Precipitation: Colorado River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after September 1, 2019. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on September 6, 2019. 6) Daily water figures are subject to change.

Lake Powell Report*

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
