

WATER WATCH REPORT

February 22, 2021

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Last Year	Historical Median	
	Total	Usable	Current			
Antero	19,881	19,826	19,326	97%	100%	99%
Eleven Mile	97,779	97,779	94,526	97%	103%	102%
Cheesman	79,064	79,064	46,122	58%	69%	83%
Marston	19,256	13,133	8,021	61%	69%	52%
Strontia Springs	7,863	7,163	6,489	91%	90%	94%
Chatfield	27,076	10,782	7,063	66%	90%	94%
Dillon	257,304	249,095	200,536	81%	90%	89%
Gross	41,811	29,811	11,763	39%	50%	43%
Ralston	10,776	7,276	3,756	52%	58%	53%
Meadow Creek	5,370	4,520	1,233	27%	0%	12%
Total	566,180	518,449	398,835	77%	85%	80%

Daily Use

Supply Reservoir Contents

* The dry scenario represents the 90% exceedance level meaning 90% of the forecasted scenarios are above this level. The wet scenario represents the 10% exceedance level meaning 10% of the forecasted scenarios are above this level. The normal or most probable scenario represents the 50% exceedance level where 50% of the forecasts fall above and 50% of the forecasts fall below this level.

February Precipitation

Cumulative Precipitation: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Cumulative Precipitation: Colorado River Watershed

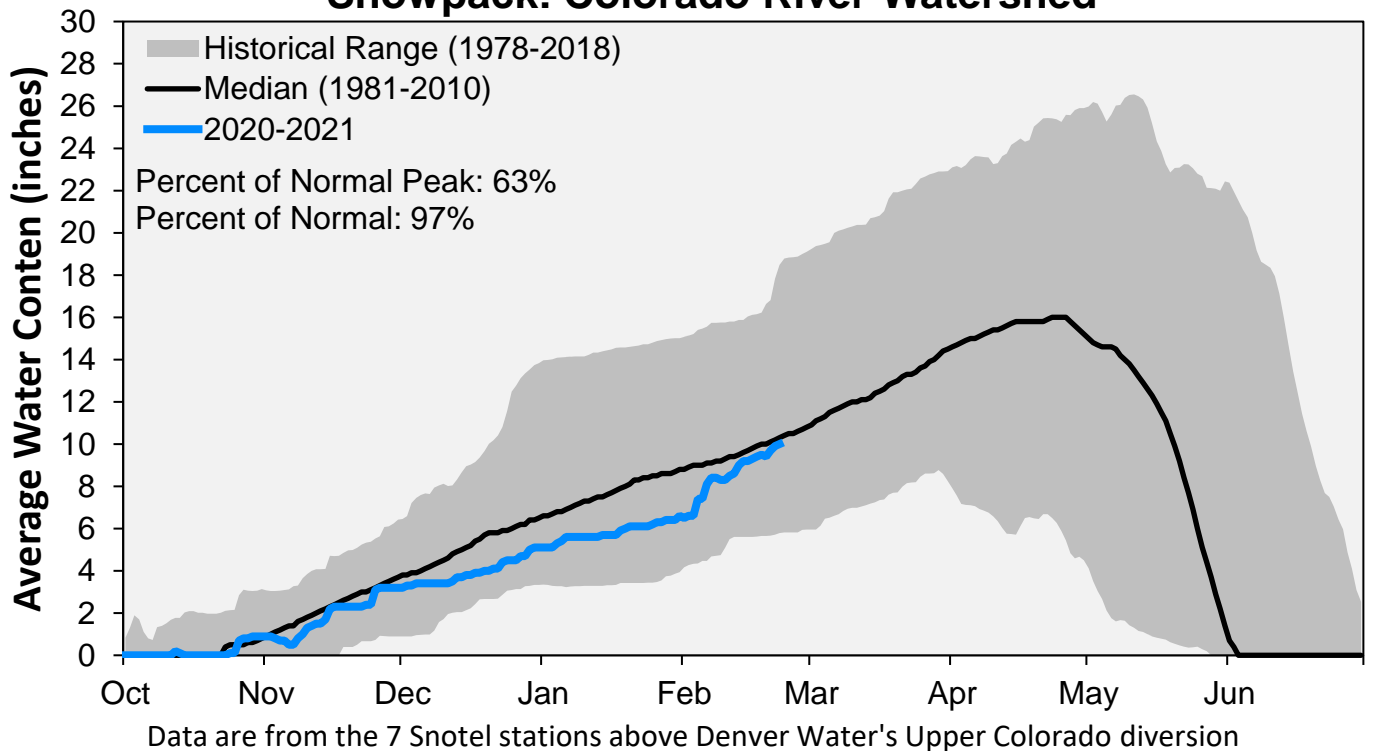

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Snowpack: South Platte River Watershed

Snowpack: Colorado River Watershed

	24	102											
	25	99											
	26	101											
	27	105											
	28	106											
	29	102											
	30	95											
	31	100											
Monthly Average	100	104											101
% of 2020 Expected Daily Use	91%	95%											93%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after January 1, 2021. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on January 11th, 2021. 6) Daily water figures are subject to change.

Lake Powell Report*

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
