

## WATER WATCH REPORT

February 8, 2021

### Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Last Year	Historical Median	
	Total	Usable	Current			
Antero	19,881	19,826	19,326	97%	100%	99%
Eleven Mile	97,779	97,779	94,824	97%	103%	102%
Cheesman	79,064	79,064	44,182	56%	70%	83%
Marston	19,256	13,133	8,765	67%	71%	54%
Strontia Springs	7,863	7,163	6,113	85%	92%	93%
Chatfield	27,076	10,782	7,180	67%	89%	92%
Dillon	257,304	249,095	203,591	82%	90%	90%
Gross	41,811	29,811	11,543	39%	58%	47%
Ralston	10,776	7,276	4,438	61%	47%	57%
Meadow Creek	5,370	4,520	1,233	27%	0%	12%
<b>Total</b>	<b>566,180</b>	<b>518,449</b>	<b>401,196</b>	<b>77%</b>	<b>86%</b>	<b>81%</b>

### Daily Use

# Supply Reservoir Contents

\* The dry scenario represents the 90% exceedance level meaning 90% of the forecasted scenarios are above this level. The wet scenario represents the 10% exceedance level meaning 10% of the forecasted scenarios are above this level. The normal or most probable scenario represents the 50% exceedance level where 50% of the forecasts fall above and 50% of the forecasts fall below this level.

February 8, 2021

# February Precipitation

### Cumulative Precipitation: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

### Cumulative Precipitation: Colorado River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

### Snowpack: South Platte River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper South Platte diversion facilities.

### Snowpack: Colorado River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper Colorado diversion

February 8, 2021

Denver Water Use and Reservoir Contents 2021													
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 518,449 AF)	398,900												
Actual End-of-Month Supply Reservoir Contents (AF)	402,356												
Actual % Full	78%												
Historical Median % Full	81%												
2021 Expected Daily Use (MG)	109	109	107	124	161	263	305	298	276	163	110	105	109
Actual Daily Use (MG)	1	95	100										
	2	94	97										
	3	103	101										
	4	97	99										
	5	93	100										
	6	104	95										
	7	99	102										
	8	101

	28	106											
	29	102											
	30	95											
	31	100											
Monthly Average	100	99											100
% of 2020 Expected Daily Use	91%	91%											91%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after January 1, 2021. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on January 11<sup>th</sup>, 2021. 6) Daily water figures are subject to change.

# Lake Powell Report\*

\* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
