

DENVER WATER

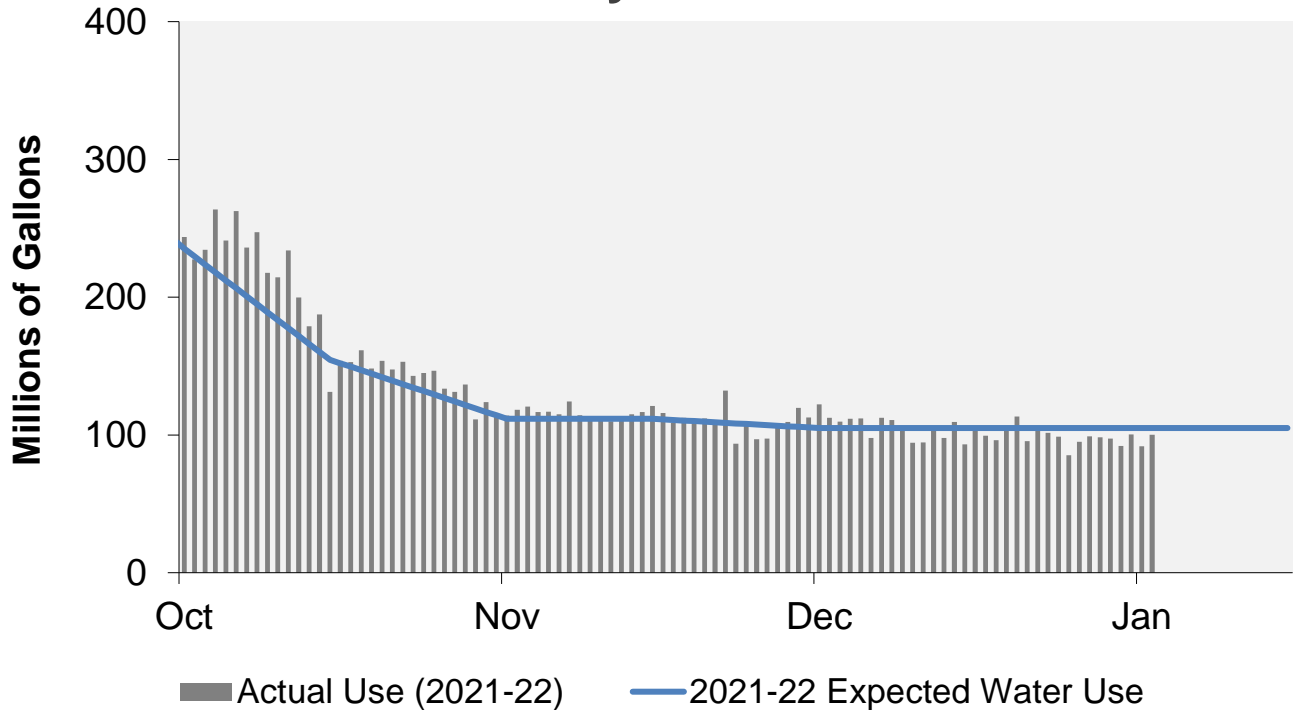

WATER WATCH REPORT

January 3, 2022

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Last Year	Historical Median	
	Total	Usable	Current			
Antero	20,122	20,067	20,086	100%	96%	99%
Eleven Mile	97,779	97,779	99,040	101%	99%	101%
Cheesman	79,064	79,064	69,977	89%	47%	84%
Marston	19,108	13,133	10,736	82%	74%	54%
Strontia Springs	7,863	7,163	6,079	85%	90%	93%
Chatfield	27,076	10,782	7,831	73%	75%	71%
Dillon	257,304	249,095	191,480	77%	85%	91%
Gross	41,811	29,811	22,966	77%	37%	55%
Ralston	10,776	7,276	0	0%	74%	72%
Meadow Creek	5,370	4,520	3,043	67%	27%	18%
Total	566,273	518,690	431,239	83%	78%	83%

Daily Use

Supply Reservoir Contents

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

December Precipitation

Snowpack: South Platte River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper South Platte diversion

Snowpack: Colorado River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper Colorado diversion

Cumulative Precipitation: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Cumulative Precipitation: Colorado River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after December 13th, 2021. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on December 13th, 2021. 6) Daily water figures are subject to change.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after January 3rd, 2022. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on January 3rd, 2022. 6) Daily water figures are subject to change.

Lake Powell Report*

Lake Powell Elevation (2001-Current)

Colorado River above Lake Powell Snowpack

Data are from the 115 SNOTEL stations above Lake Powell.

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
