

WATER WATCH REPORT

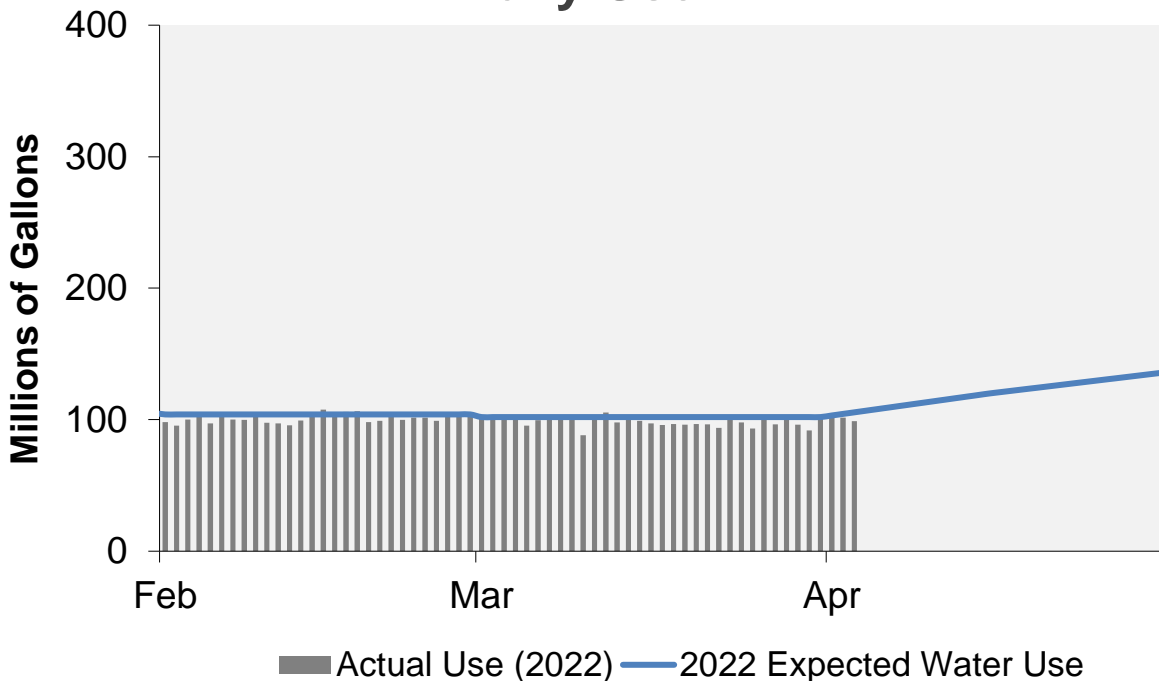

April 4, 2022

Supply Reservoir Contents

Reservoir	Capacity (acre-feet)		Current Usable Contents (acre-feet)	Percent Full		
	Total	Usable		Current	Last Year	Historical Median
Antero	20,122	20,067	20,108	100%	98%	99%
Eleven Mile	97,779	97,779	100,140	102%	97%	102%
Cheesman	79,064	79,064	58,880	74%	64%	85%
Marston	19,108	13,133	6,889	52%	77%	61%
Strontia Springs	7,863	7,163	6,252	87%	88%	94%
Chatfield	28,709	12,415	9,585	77%	56%	96%
Dillon	257,304	249,095	191,428	77%	78%	86%
Gross*	41,811	29,811	17,523	59%	26%	31%
Ralston	10,776	7,276	-	0%	60%	55%
Meadow Creek	5,370	4,520	3,043	67%	27%	12%
Total	567,906	520,323	413,848	80%	76%	79%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Acre-Feet

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

April 4, 2022

April Precipitation

Snowpack: South Platte River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper South Platte diversion

Snowpack: Colorado River Watershed

Data are from the 7 Snotel stations above Denver Water's Upper Colorado diversion

Cumulative Precipitation: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Cumulative Precipitation: Colorado River Watershed

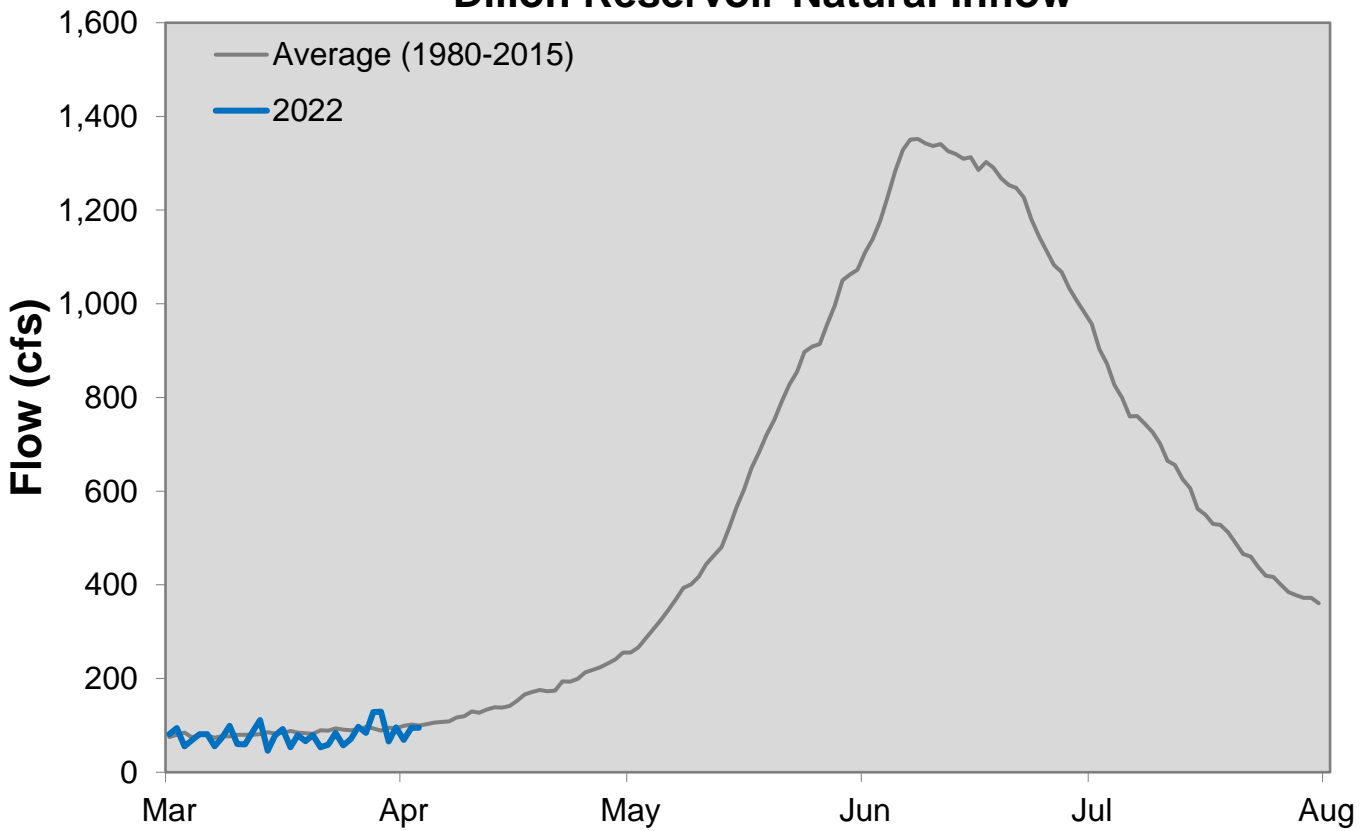

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

	31	91		101									
Monthly Average	99	101	98	101									99
% of 2022 Expected Daily Use	94%	97%	97%	84%									96%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 4th, 2022. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 4th, 2022. 6) Daily water figures are subject to change.

Lake Powell Report*

Lake Powell Elevation (2001-Current)

Colorado River above Lake Powell Snowpack

Data are from the 115 SNOTEL stations above Lake Powell.

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
