

WATER WATCH REPORT

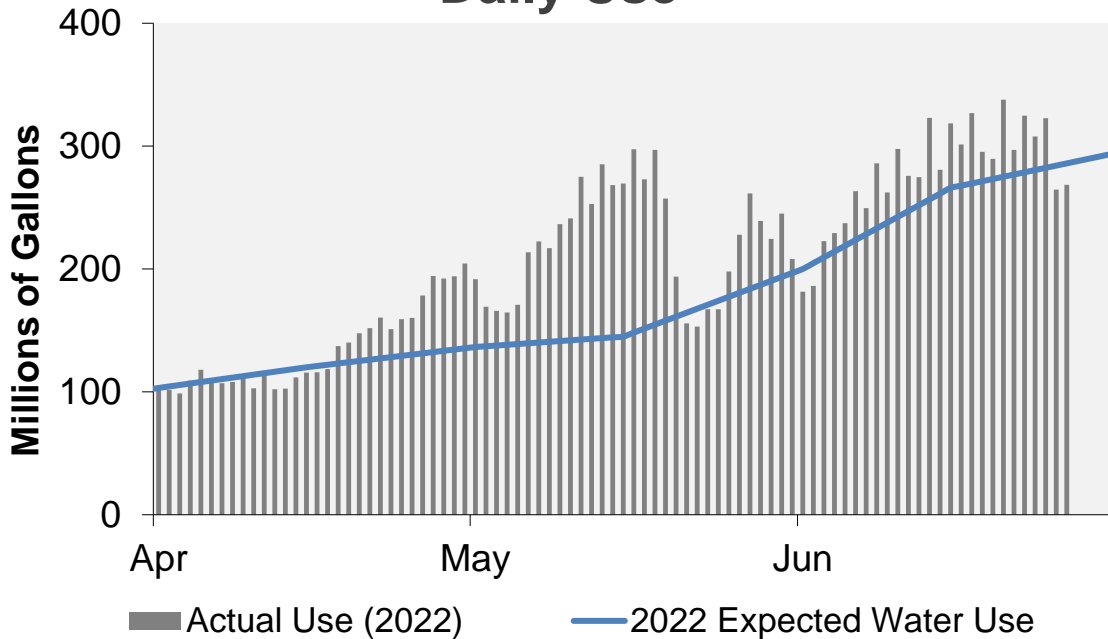

June 27, 2022

Supply Reservoir Contents

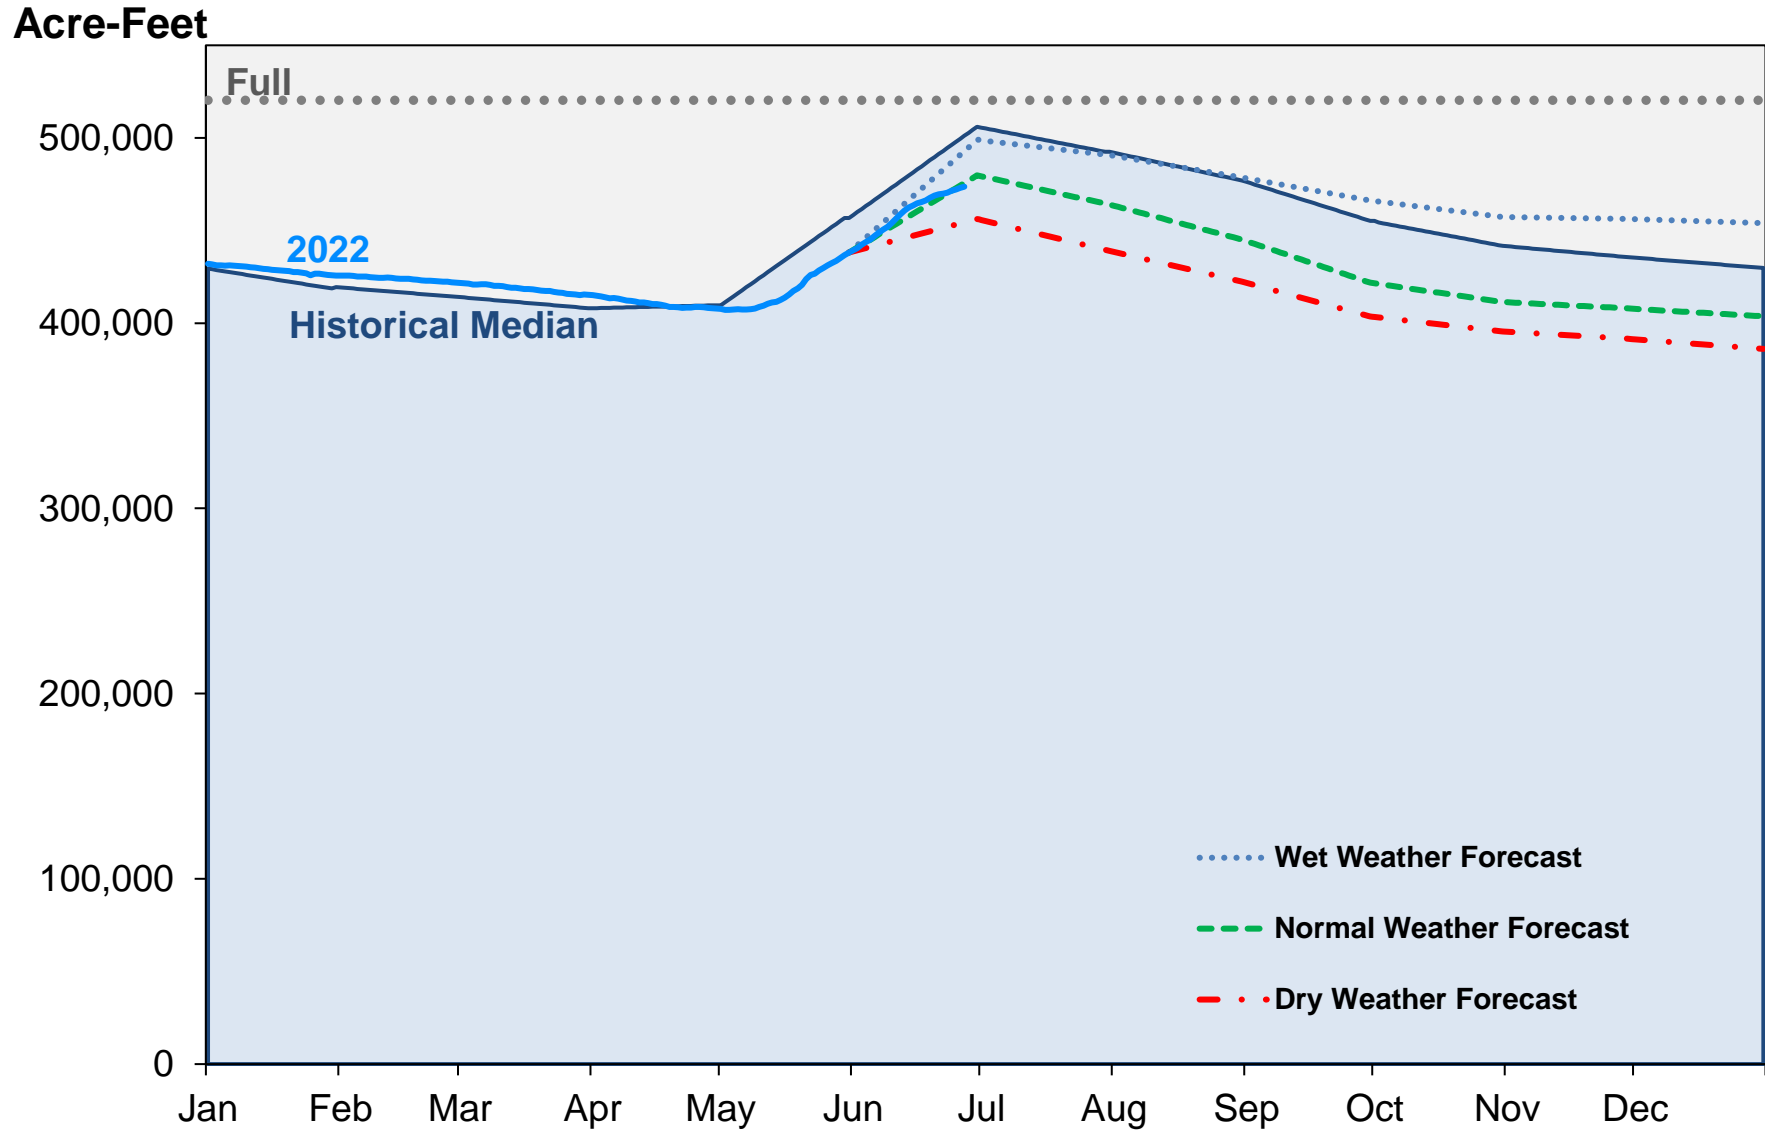

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last	Historical
	Total	Usable	Year		Median	
Antero	20,122	20,067	20,283	101%	100%	100%
Eleven Mile	97,779	97,779	99,658	102%	101%	103%
Cheesman	79,064	79,064	69,169	87%	92%	99%
Marston	19,108	13,133	8,822	67%	65%	76%
Strontia Springs	7,863	7,163	6,278	88%	93%	95%
Chatfield	28,709	12,415	3,121	25%	72%	82%
Dillon	257,304	249,095	238,819	96%	100%	100%
Gross*	41,811	29,811	16,258	55%	97%	95%
Ralston	10,776	7,276	6,687	92%	71%	93%
Meadow Creek	5,370	4,520	4,573	101%	90%	86%
Total	567,906	520,323	473,668	91%	97%	97%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

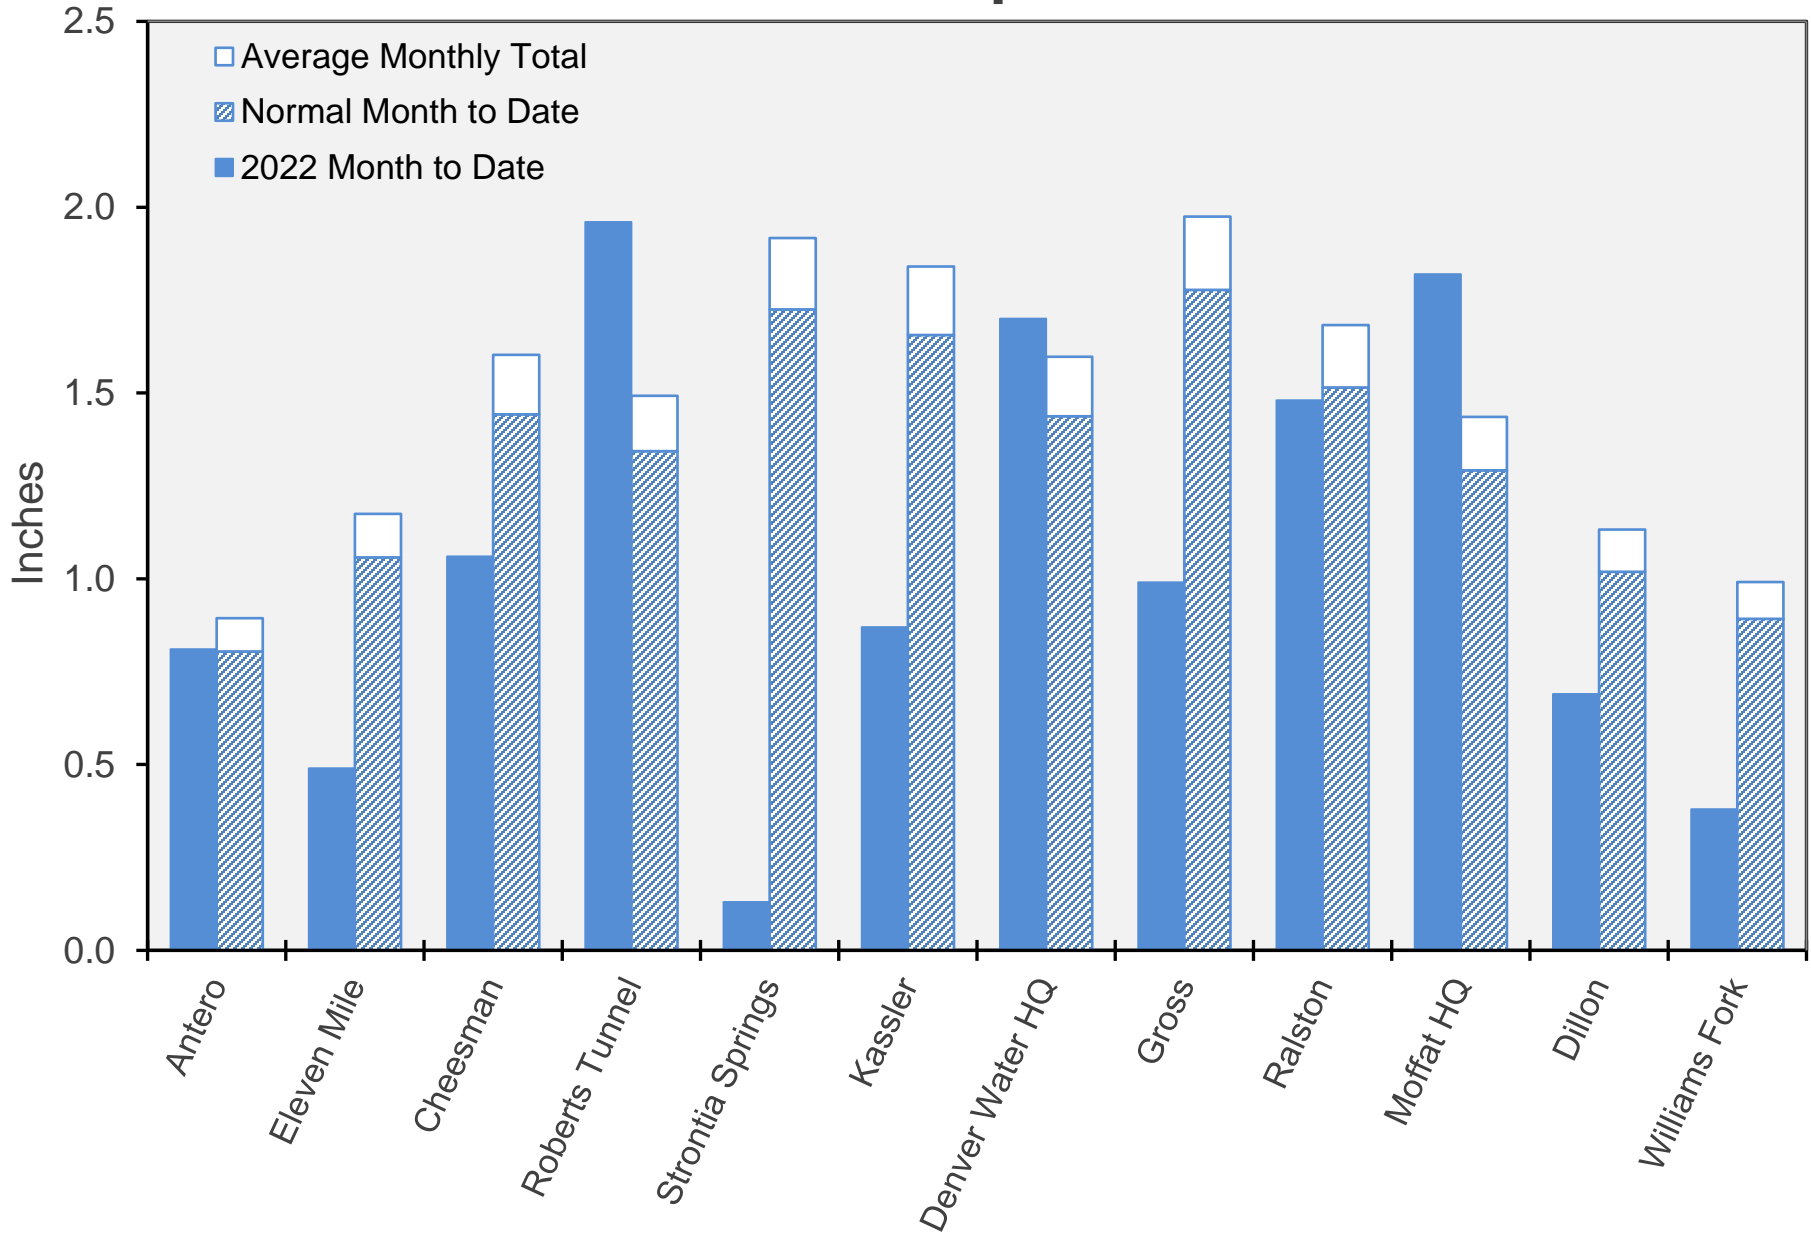

Supply Reservoir Contents

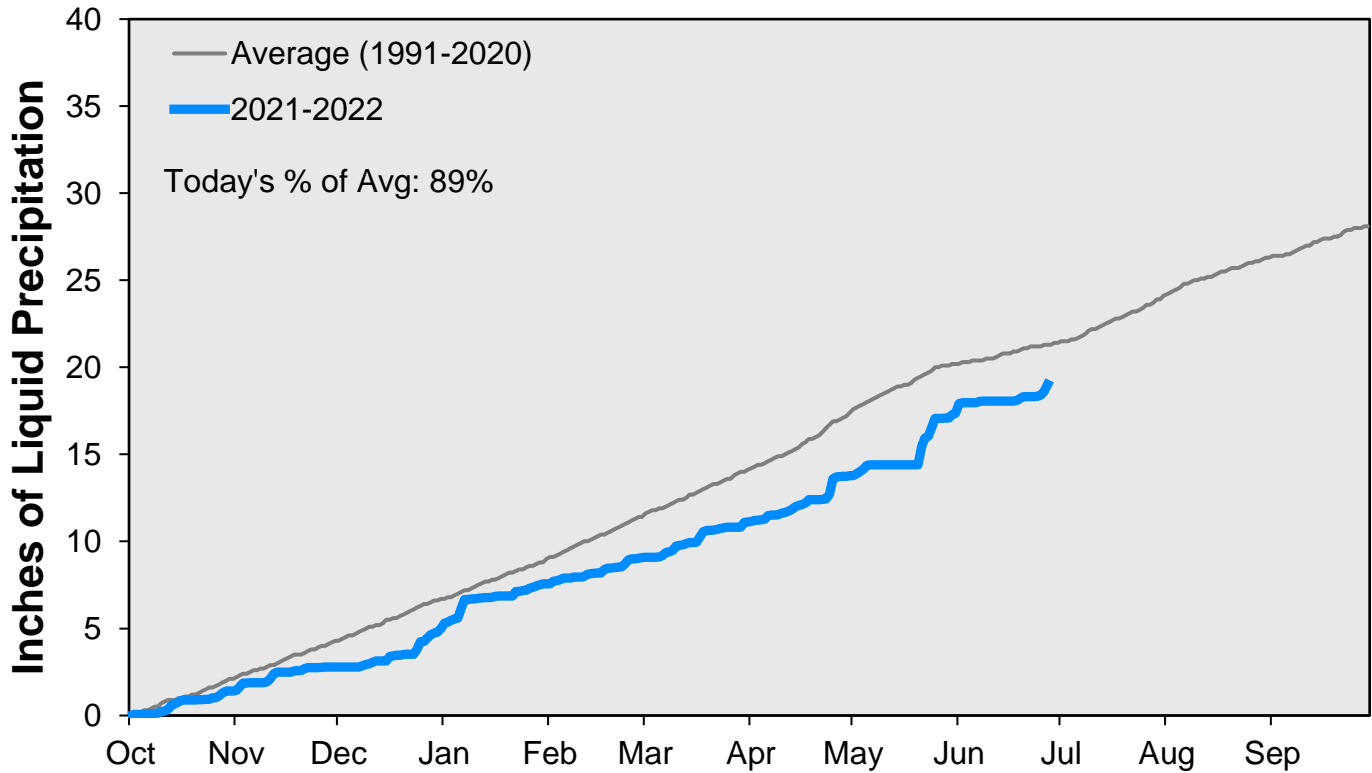

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

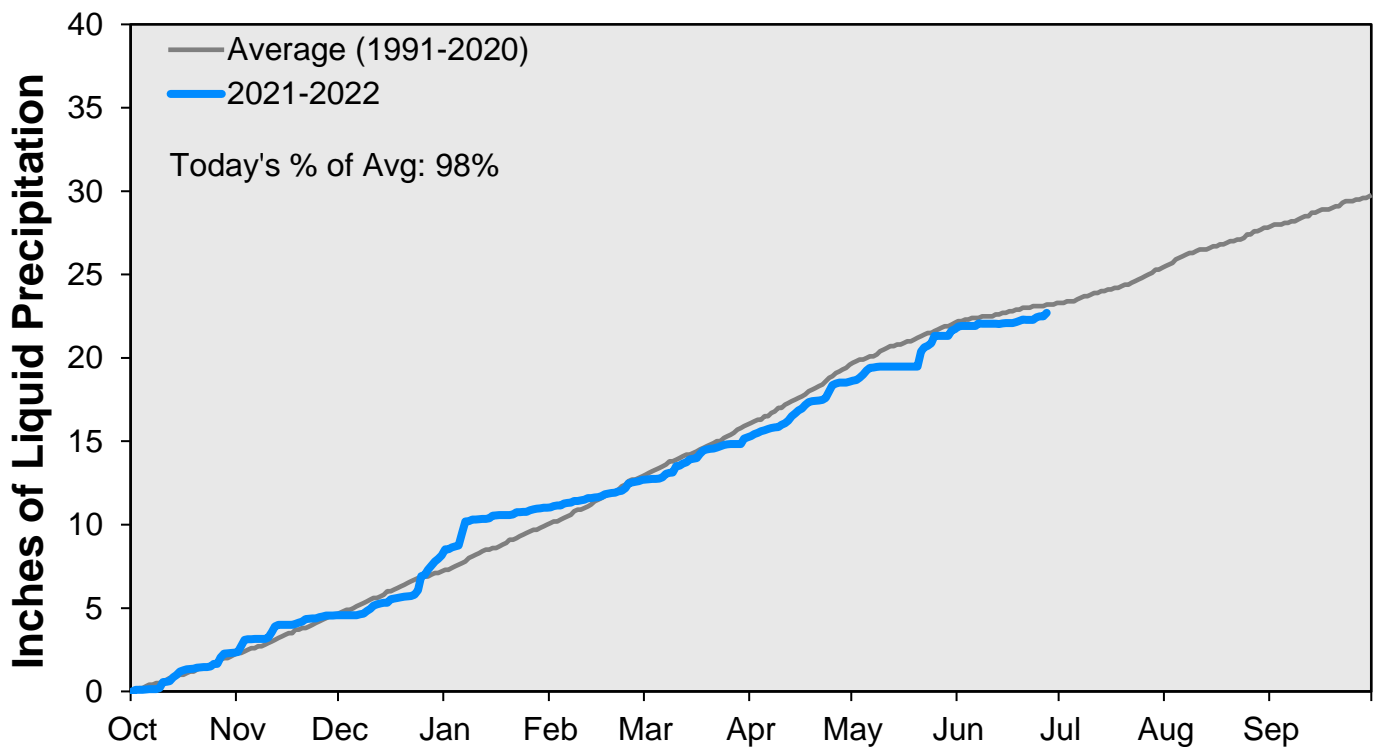

June Precipitation

CUMULATIVE PRECIPITATION: SOUTH PLATTE RIVER WATERSHED

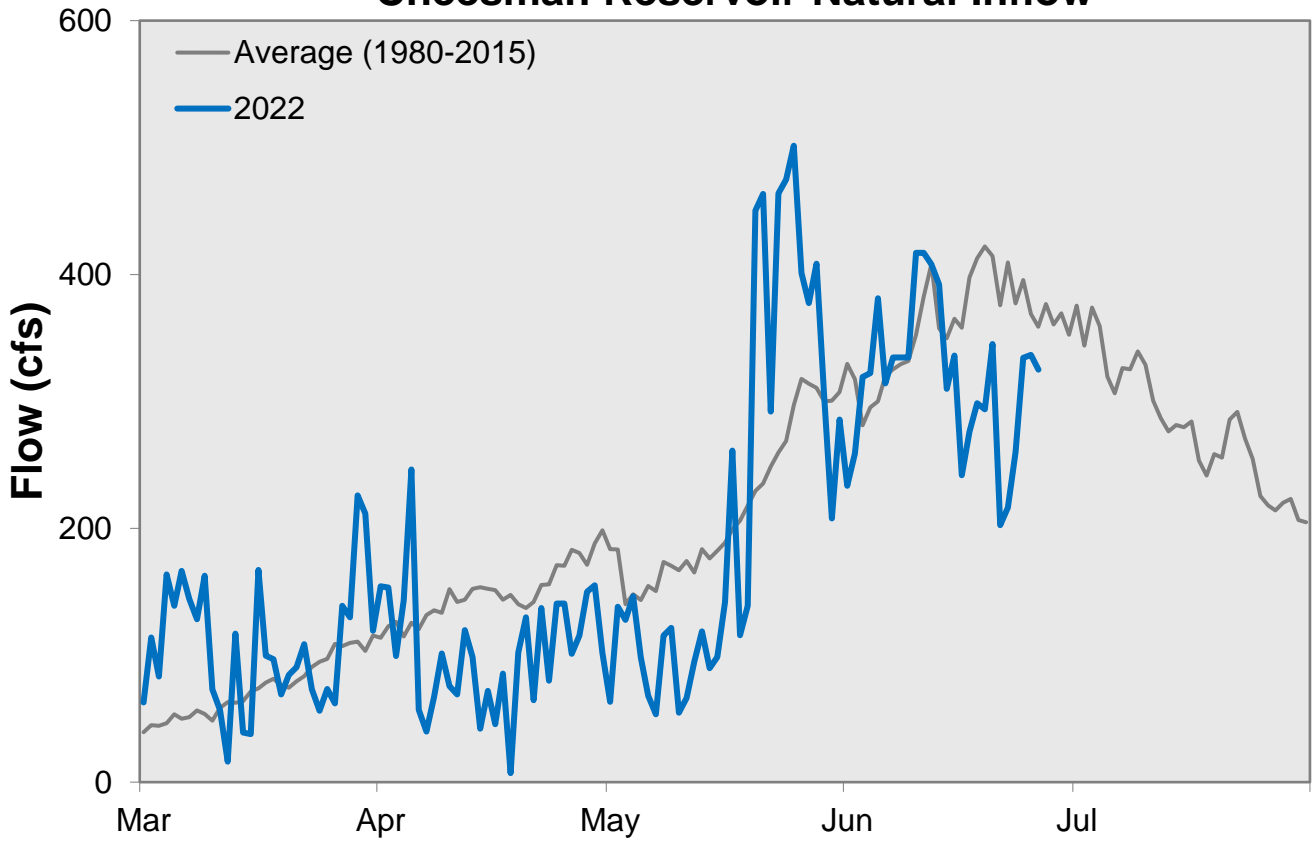

CUMULATIVE PRECIPITATION: COLORADO RIVER WATERSHED

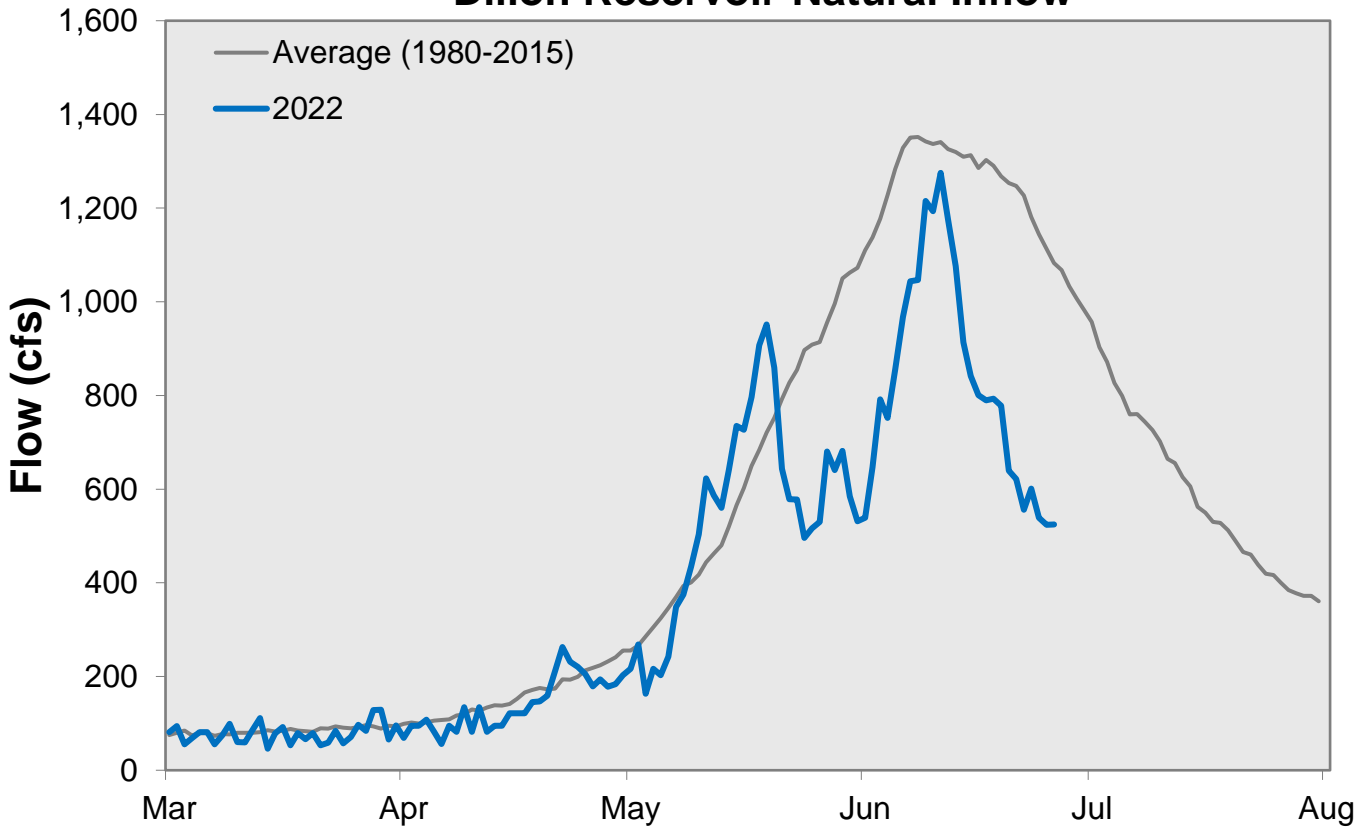

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

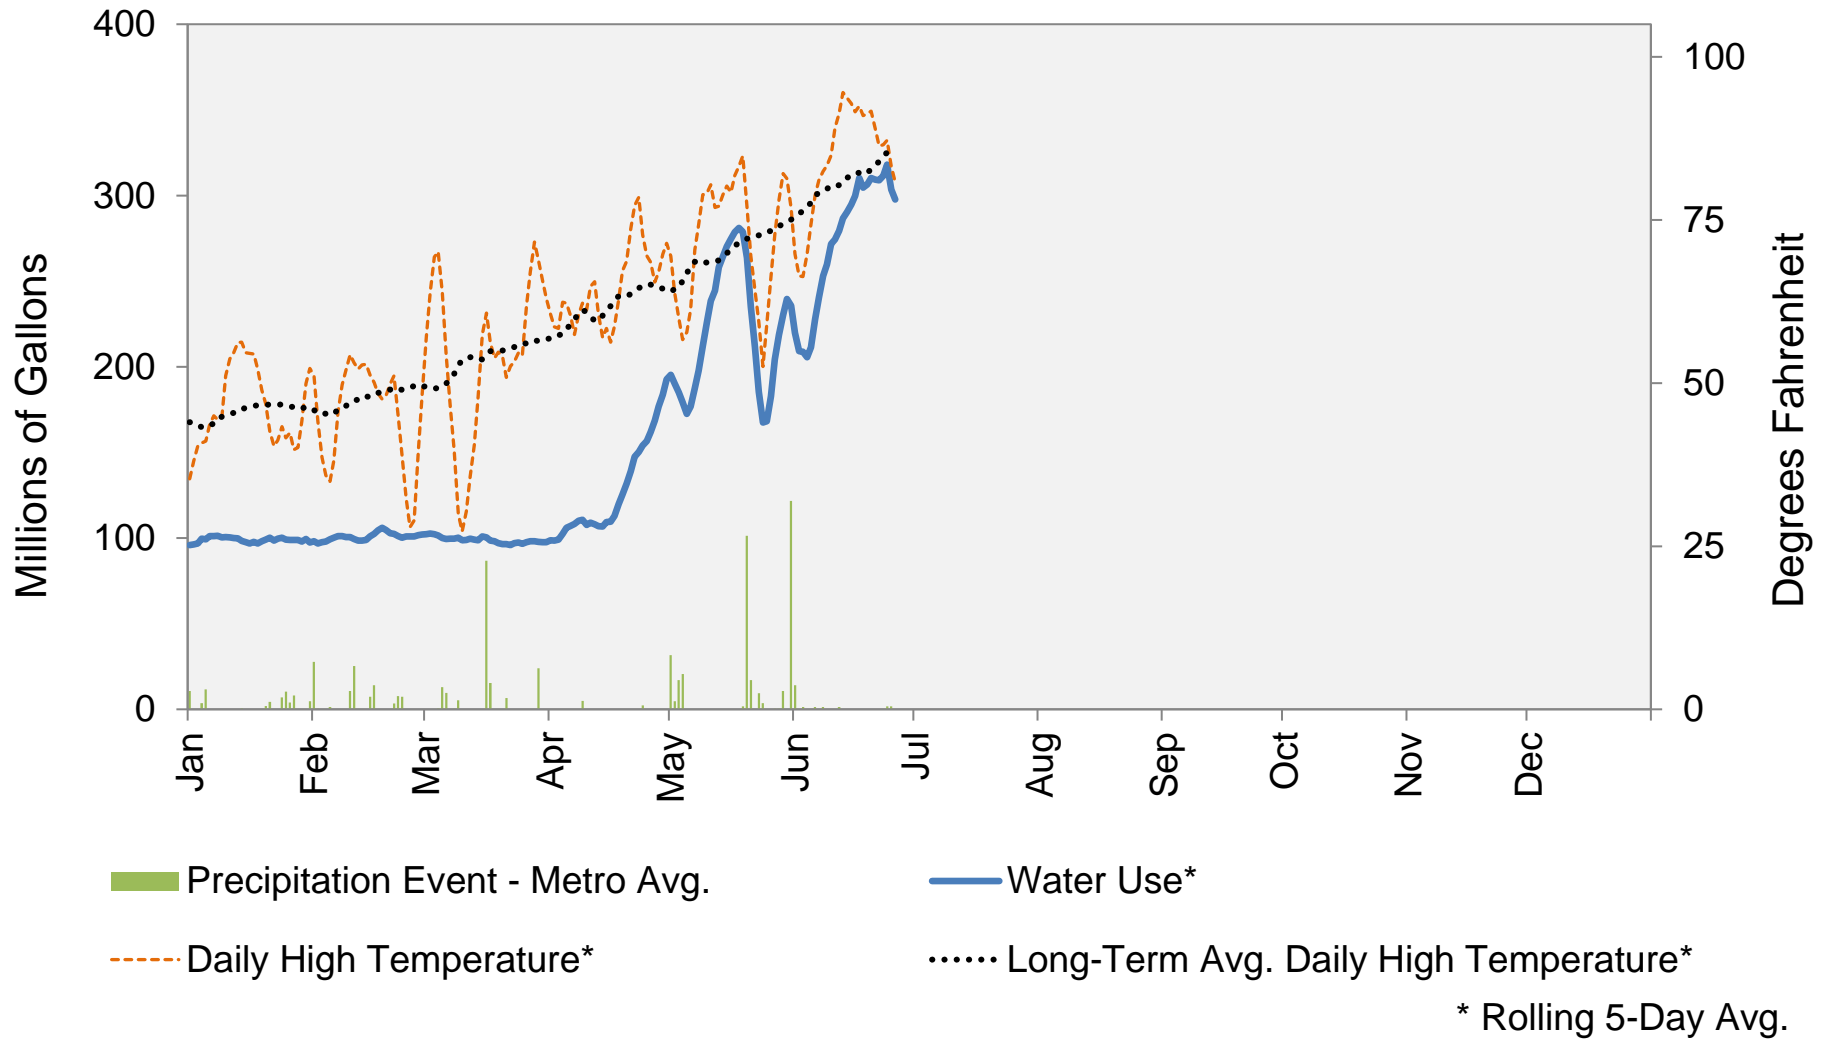

Cheesman Reservoir Natural Inflow

Dillon Reservoir Natural Inflow

2022 Water Use and Weather Conditions

June 27, 2022

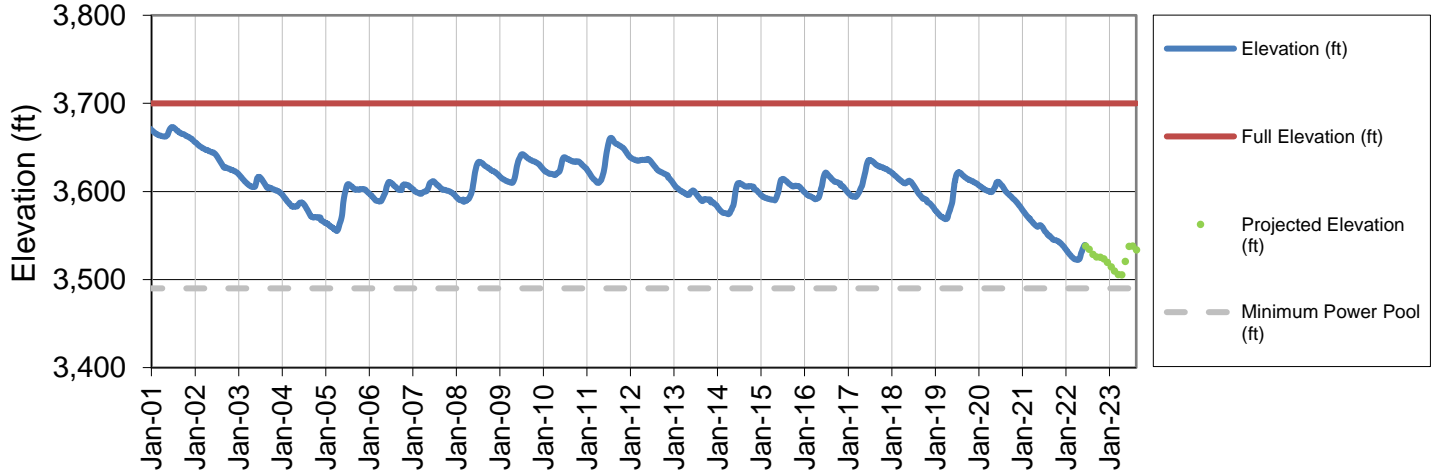

Denver Water Use and Reservoir Contents 2022

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply Reservoir Contents (Full = 518,449 AF)	471,000												
Actual End-of-Month Supply Reservoir Contents (AF)	425,595	421,903	415,083	407,905	438,115

Monthly Average	99	101	98	134	223	278							153
% of 2022 Expected Daily Use	94%	97%	97%	112%	142%	108%							111%

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after June 6th, 2022. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on June 6th, 2022. 6) Daily water figures are subject to change.

Lake Powell Report*

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
