

WATER WATCH REPORT

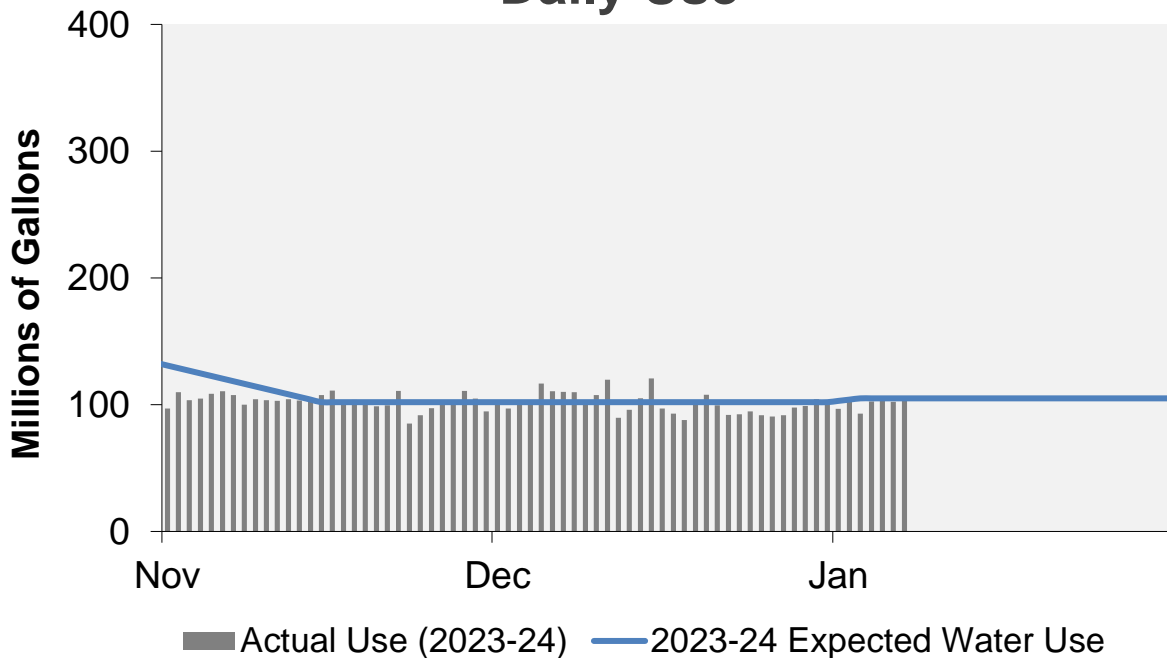

January 8, 2024

Supply Reservoir Contents

Reservoir	Capacity		Current Usable Contents (acre-feet)	Percent Full		
	(acre-feet)			Current	Last Year	Historical Median
	Total	Usable				
Antero	20,122	20,067	19,933	99%	98%	99%
Eleven Mile	97,779	97,779	99,280	102%	102%	101%
Cheesman	79,064	79,064	73,217	93%	90%	84%
Marston	19,108	13,133	10,051	77%	55%	54%
Strontia Springs	7,863	7,163	5,669	79%	88%	93%
Chatfield	28,709	12,415	12,307	99%	53%	68%
Dillon	257,304	249,095	212,503	85%	83%	92%
Gross*	41,811	29,811	4,863	16%	34%	55%
Ralston	10,776	7,276	6,550	90%	79%	73%
Meadow Creek	5,370	4,520	-	0%	3%	19%
Total	567,906	520,323	444,374	85%	83%	83%

*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

Daily Use

Supply Reservoir Contents

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

December Precipitation

Snowpack: South Platte River Watershed

Data are from the 7 SNOTEL stations above Denver Water's Upper South Platte diversion facilities.

Snowpack: Colorado River Watershed

Data are from the 9 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Cumulative Precipitation: South Platte River

Cumulative Precipitation: Colorado River

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather December 4th, 2023. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on December 4th, 2023. 6) Daily water figures are subject to change.

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather January 8th, 2024. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on January 8th, 2024. 6) Daily water figures are subject to change.

Lake Powell Report*

Colorado River Above Lake Powell Snowpack

Lake Powell Elevation (2001-Current)

* Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
